

# NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM GENERAL PERMIT

**DISCHARGE AUTHORIZED** DISCHARGES ASSOCIATED WITH BOAT AND SHIP BUILDING AND REPAIR INDUSTRIES (INCLUDING OFFSHORE OIL AND GAS WELL DRILLING AND PRODUCTION PLATFORMS BUILDING AND REPAIR) CONSISTING OF STORM WATER, NON-CONTACT COOLING WATER, UNCONTAMINATED CONDENSATE, COOLING TOWER BLOWDOWN, BOILER BLOWDOWN, DEMINERALIZER WASTEWATER, TREATED SANITARY WASTEWATER, BILGE/BALLAST WATER, WASH WATER, HYDROSTATIC AND PRESSURE TEST WATER, HYDROBLAST WATER (NOT INCLUDING WET ABRASIVE BLAST WATER), AND STORM WATER FROM FUELING, PETROLEUM STORAGE AND HANDLING, EQUIPMENT STORAGE, AND MAINTENANCE AREAS

**AREA OF COVERAGE:** THE STATE OF ALABAMA

**PERMIT NUMBER:** ALG030000

**RECEIVING WATERS:** ALL WATERS OF THE STATE NOT DESIGNATED OUTSTANDING NATIONAL RESOURCE WATER OR OUTSTANDING ALABAMA WATER

*In accordance with and subject to the provisions of Federal Water Pollution Control Act, as amended, 33 U.S.C. §§1251-1388 (the "FWPCA"), the Alabama Water Pollution Control Act, as amended, **Code of Alabama 1975**, §§22-22-1 to 22-22-14 (the "AWPCA"), the Alabama Environmental Management Act, as amended, **Code of Alabama 1975**, §§22-22A-1 to 22-22A-17, and rules and regulations adopted thereunder, and subject further to the terms and conditions set forth in this permit, the dischargers covered by this permit are hereby authorized to discharge into the above receiving waters.*

**ISSUANCE DATE:** DRAFT

**EFFECTIVE DATE:** DRAFT

**EXPIRATION DATE:** DRAFT

## DRAFT

# TABLE OF CONTENTS

<b>PART I: DISCHARGE LIMITATIONS, CONDITIONS, AND REQUIREMENTS</b>	<b>1</b>
<b>A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS</b>	<b>1</b>
DSN001: Discharges of storm water associated with commercial boat and commercial ship building and repair activities including offshore oil and gas well drilling and production platforms.	1
DSN002: Discharges of storm water associated with recreational and pleasure boat building and repair activities including incidental boat repair associated with marina operations.	2
DSN003: Discharges of storm water from those establishments where ship and boat building and repair activities are not exposed to storm water (i.e., conducted in a totally enclosed area).	3
DSN004: Discharges of treated sanitary wastewater.	4
DSN005: Discharges of bilge and ballast water, wash water including pressure wash water resulting from the removal of marine growth, or waters from hydrostatic and pressure testing all which have not come into contact with product, waste, or waste residuals.	5
DSN006: Discharges of treated pressure wash waters which are contaminated with paint chips or other additives and/or hydroblast water (not including wet abrasive blasting water) resulting from the cleaning of vessels.	6
DSN007: Discharges associated with non-contact cooling water, uncontaminated condensate, cooling tower and boiler blowdown, and demineralizer wastewater.	7
DSN009: Discharge limitations and monitoring requirements for uncontaminated storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas.	8
DSN010: Discharges of storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas.	9
Discharge Monitoring Requirements applicable to all storm water discharges.	10
<b>B. DISCHARGE MONITORING AND RECORD KEEPING REQUIREMENTS</b>	<b>11</b>
1. Representative Sampling	11
2. Test Procedures	11
3. Recording of Results	11
4. Records Retention and Production	11
5. Monitoring Equipment and Instrumentation	12
<b>C. DISCHARGE REPORTING REQUIREMENTS</b>	<b>12</b>
1. Reporting of Monitoring Requirements	12
2. Noncompliance Notification	14
<b>D. OTHER REPORTING AND NOTIFICATION REQUIREMENTS</b>	<b>15</b>
1. Anticipated Noncompliance	15
2. Termination of Discharge	15
3. Updating Information	15
4. Duty to Provide Information	15
5. New or Increased Discharges	15
6. Cooling Water, Boiler Water, and other Waste Water Additives	15
<b>E. SCHEDULE OF COMPLIANCE</b>	<b>16</b>
<b>PART II: OTHER REQUIREMENTS, RESPONSIBILITIES, AND DUTIES</b>	<b>17</b>
<b>A. REQUIREMENTS FOR COVERAGE UNDER THIS GENERAL PERMIT</b>	<b>17</b>
1. Notice of Intent	17
2. Content of Notice of Intent	17
<b>B. OPERATIONAL AND MANAGEMENT REQUIREMENTS</b>	<b>17</b>
1. Facilities Operation and Maintenance	17
2. Best Management Practices	17
3. Spill Prevention, Control, and Management	18
<b>C. OTHER RESPONSIBILITIES</b>	<b>18</b>
1. Duty to Mitigate Adverse Impacts	18

## TABLE OF CONTENTS (CONTINUED)

2. Right of Entry and Inspection .....	18
<b>D. BYPASS AND UPSET .....</b>	<b>18</b>
1. Bypass .....	18
2. Upset .....	19
<b>E. DUTY TO COMPLY WITH PERMIT, RULES, AND STATUTES .....</b>	<b>19</b>
1. Duty to Comply .....	19

<b>C. DISCHARGE(S) TO IMPAIRED WATERS REQUIREMENTS.....</b>	<b>32</b>
1. Requirements Applicable to a Facility Eligible for Coverage, or Covered, under this Permit with Discharge(s) to 303(d) Listed Waters.....	32
2. Requirements Applicable to a Facility Eligible for Coverage, or Covered, under this Permit with Discharges into Waters with EPA-Approved or EPA-Established TMDLs .....	32
3. Requirements for New or Revised BMP Plans.....	33
<b>D. COOLING WATER INTAKE STRUCTURES (CWIS) REQUIREMENTS.....</b>	<b>33</b>
1. Cooling Water Intake Requirements – Facility Obtaining Cooling Water from Facility Intake Structure.....	33
2. Cooling Water Intake Requirements – Facilities Obtaining Cooling Water from Another Entity .....	34

## PART I: DISCHARGE LIMITATIONS, CONDITIONS, AND REQUIREMENTS

### A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's Notice of Intent (NOI):

**DSN001: Discharges of storm water associated with commercial boat and commercial ship building and repair activities including offshore oil and gas well drilling and production platforms.<sup>4, 5</sup>**

Such discharge shall be limited and monitored by the permittee as specified below:

EFFLUENT CHARACTERISTIC	UNITS	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS <sup>1</sup>	
		Daily Minimum	Daily Maximum	Monthly Average <sup>2</sup>	Measurement Frequency	Sample Type
Rainfall	Inches	–	Monitor	Monitor	1/6 months	<sup>3</sup>
pH	s.u.	Monitor	Monitor	–	1/6 months	Grab
Oil and Grease	mg/l	–	15	Monitor	1/6 months	Grab
Chemical Oxygen Demand	mg/l	–	Monitor	Monitor	1/6 months	Grab
Zinc, Total Recoverable	mg/l	–	Monitor	Monitor	1/6 months	Grab
Copper, Total Recoverable	mg/l	–	Monitor	Monitor	1/6 months	Grab
Lead, Total Recoverable	mg/l	–	Monitor	Monitor	1/6 months	Grab
Tin, Total	mg/l	–	Monitor	Monitor	1/6 months	Grab
Total Suspended Solids	mg/l	–	Monitor	Monitor	1/6 months	Grab
Iron, Total Recoverable	mg/l	–	Monitor	Monitor	1/6 months	Grab
Aluminum, Total Recoverable	mg/l	–	Monitor	Monitor	1/6 months	Grab

**THE DISCHARGE SHALL HAVE NO SHEEN, AND THERE SHALL BE NO DISCHARGE OF VISIBLE OIL, FLOATING SOLIDS OR VISIBLE FOAM IN OTHER THAN TRACE AMOUNTS.**

Notes:

- <sup>1</sup> Samples collected to comply with the monitoring requirements specified above shall be collected at the following location: At the nearest accessible location just prior to discharge and after final treatment. Unless otherwise specified, composite samples shall be time composite samples collected using automatic sampling equipment or a minimum of eight (8) equal volume grab samples collected over equal time intervals. All composite samples shall be collected for the total period of discharge not to exceed 24 hours.
- <sup>2</sup> Monthly average limits apply only when a parameter is monitored more than once in a month.
- <sup>3</sup> See Part IV.A.
- <sup>4</sup> This outfall designation is intended for those establishments primarily engaged in activities categorized under the Standard Industrial Classification (SIC) Code of 3731.
- <sup>5</sup> See Part IV.B. for Best Management Practices (BMP) requirements.

## A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's NOI:

**DSN002: Discharges of storm water associated with recreational and pleasure boat building and repair activities including incidental boat repair associated with marina operations.**<sup>4, 5</sup>.

Such discharge shall be limited and monitored by the permittee as specified below:

EFFLUENT CHARACTERISTIC	UNITS	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS <sup>1</sup>	
		Daily Minimum	Daily Maximum	Monthly Average <sup>2</sup>	Measurement Frequency	Sample Type
Rainfall	Inches	–	Monitor	Monitor	1/year	<sup>3</sup>
pH	s.u.	Monitor	Monitor	–	1/year	Grab
Oil and Grease	mg/l	–	15	Monitor	1/year	Grab
Chemical Oxygen Demand	mg/l	–	Monitor	Monitor	1/year	Grab
Zinc, Total Recoverable	mg/l	–	Monitor	Monitor	1/year	Grab
Copper, Total Recoverable	mg/l	–	Monitor	Monitor	1/year	Grab
Lead, Total Recoverable	mg/l	–	Monitor	Monitor	1/year	Grab
Tin, Total	mg/l	–	Monitor	Monitor	1/year	Grab
Total Suspended Solids	mg/l	–	Monitor	Monitor	1/year	Grab
Iron, Total Recoverable	mg/l	–	Monitor	Monitor	1/year	Grab
Aluminum, Total Recoverable	mg/l	–	Monitor	Monitor	1/year	Grab

**THE DISCHARGE SHALL HAVE NO SHEEN, AND THERE SHALL BE NO DISCHARGE OF VISIBLE OIL, FLOATING SOLIDS OR VISIBLE FOAM IN OTHER THAN TRACE AMOUNTS.**

### Notes:

- <sup>1</sup> Samples collected to comply with the monitoring requirements specified above shall be collected at the following location: At the nearest accessible location just prior to discharge and after final treatment. Unless otherwise specified, composite samples shall be time composite samples collected using automatic sampling equipment or a minimum of eight (8) equal volume grab samples collected over equal time intervals. All composite samples shall be collected for the total period of discharge not to exceed 24 hours.
- <sup>2</sup> Monthly average limits apply only when a parameter is monitored more than once in a month.
- <sup>3</sup> See Part IV.A.
- <sup>4</sup> This outfall designation is intended for those establishments primarily engaged in activities categorized under the Standard Industrial Classification (SIC) Code of 3732. Also, included are marina operations, which perform incidental boat repair (blasting and painting).
- <sup>5</sup> See Part IV.B. for Best Management Practices (BMP) requirements.

**A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS**

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's NOI:

**DSN003: Discharges of storm water from those establishments where ship and boat building and repair activities are not exposed to storm water (i.e., conducted in a totally enclosed area).**

Such discharge shall be limited and monitored by the permittee as specified below:

**NO MONITORING REQUIREMENTS IMPOSED**

**THE DISCHARGE SHALL HAVE NO SHEEN, AND THERE SHALL BE NO DISCHARGE OF VISIBLE OIL, FLOATING SOLIDS OR VISIBLE FOAM IN OTHER THAN TRACE AMOUNTS.**

The permittee shall submit an **ANNUAL CERTIFICATION DMR** by January 28th of each year (but no earlier than January 1<sup>st</sup>) that reports whether all discharges were in accordance with the conditions of this permit for the previous calendar year.

This certification DMR is for the previous calendar year so the permittee shall not submit the DMR on or before December 31<sup>st</sup> of the calendar year being certified.

**DMR Reporting Instructions**

The Annual Certification DMR should be marked "0" (zero) if operations had not changed and all discharges were in accordance with the conditions of the permit. If conditions had changed or all discharges were not in accordance with the conditions of the permit, the DMR should be marked "1" and the facility should contact the department regarding any changes in conditions or discharge/permit noncompliance. Any noncompliance should also be reported in accordance with Part I.C.2

## A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's NOI:

### DSN004: Discharges of treated sanitary wastewater.<sup>5, 6</sup>

Such discharge shall be limited and monitored by the permittee as specified below:

EFFLUENT CHARACTERISTIC	UNITS	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS <sup>1</sup>	
		Daily Minimum	Daily Maximum	Monthly Average <sup>2</sup>	Measurement Frequency	Sample Type
Flow	gal/day	–	Monitor	Monitor	1/2 weeks	Instantaneous
Biochemical Oxygen Demand, 5-day	mg/l.	–	45	30r	1/2 weeks	Grab
Total Suspended Solids	mg/l	–	45	30	1/2 weeks	Grab
Total Residual Chlorine <sup>3 4</sup>	mg/l	–	0.013 / 0.019	0.0075 / 0.011	1/2 weeks	Grab
pH	s.u.	6.0	8.5	–	1/2 weeks	Grab
Enterococci	col/100 ml	–	104	35	1/2 weeks	Grab

**THE DISCHARGE SHALL HAVE NO SHEEN, AND THERE SHALL BE NO DISCHARGE OF VISIBLE OIL, FLOATING SOLIDS OR VISIBLE FOAM IN OTHER THAN TRACE AMOUNTS.**

#### Notes:

- <sup>1</sup> Samples collected to comply with the monitoring requirements specified above shall be collected at the following location: At the nearest accessible location just prior to discharge and after final treatment. Unless otherwise specified, composite samples shall be time composite samples collected using automatic sampling equipment or a minimum of eight (8) equal volume grab samples collected over equal time intervals. All composite samples shall be collected for the total period of discharge not to exceed 24 hours.
- <sup>2</sup> Monthly average limits apply only when a parameter is monitored more than once in a month.
- <sup>3</sup> For discharges to saltwater, the daily maximum is 0.013 mg/l and the monthly average is 0.0075 mg/l. For discharges to freshwater, the daily maximum is 0.019 mg/l and the monthly average is 0.011 mg/l.
- <sup>4</sup> A measurement of TRC below 0.05 mg/l shall be considered in compliance with the permit limitations above and should be reported as "NODI=B" on the hard copy Discharge Monitoring Report (DMR) or \*B on the electronic DMR.
- <sup>5</sup> Discharges are authorized only to that segment of the Mobile River classified as Limited Warmwater Fishery.
- <sup>6</sup> Discharges resulting from the normal operation of a vessel while being used as a means of transportation are excluded from state NPDES permitting requirements.

**A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS**

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's application:

**DSN005: Discharges of bilge and ballast water, wash water including pressure wash water resulting from the removal of marine growth, or waters from hydrostatic and pressure testing all which have not come into contact with product, waste, or waste residuals.**

Such discharge shall be limited and monitored by the permittee as specified below:

**NO MONITORING REQUIREMENTS IMPOSED.**

**All discharges from DSN005 shall meet the following conditions:**

1. Best Management Practices (BMP), as defined under Part IV.B., are to be used.
2. Wastewaters which have come into contact with product, waste, or waste residuals or which contain oils, solvents, or other additives (except chlorine and biodegradable and phosphate free detergents) not identified as required by Part 5 of this section are not authorized for discharge under this outfall.
3. The discharge shall have no sheen, and there shall be no discharge of visible oil, floating solids, or visible foam in other than trace amounts.
4. Pressure washing is allowed as necessary to remove marine growth from vessels. However, unless the pressure wash water is collected and treated prior to discharge under outfall DSN006 of this permit, pressure should be maintained at or below a level which will not result in the removal of the existing paint coating and shall be performed only on areas of the hull where existing paint coating is properly adhering to the hull that will not be significantly disturbed by pressure washing.
5. Additives other than chlorine and detergent to the source water such as biocides and corrosion inhibitors for pressure wash water, hydrostatic or pressure test waters must be reviewed by the Department prior to their use from which a discharge occurs. The information required by Part I.D.6.a. of this permit must be provided.

## A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's NOI:

**DSN006: Discharges of treated pressure wash waters which are contaminated with paint chips or other additives and/or hydroblast water (not including wet abrasive blasting water) resulting from the cleaning of vessels.** <sup>3</sup>

Such discharge shall be limited and monitored by the permittee as specified below:

EFFLUENT CHARACTERISTIC	UNITS	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS <sup>1</sup>	
		Daily Minimum	Daily Maximum	Monthly Average <sup>2</sup>	Measurement Frequency	Sample Type
Flow	gal/day	–	Monitor	Monitor	Daily	Instantaneous
pH	s.u..	6.0	8.5	–	1/ week	Grab
Oil and Grease	mg/l	–	15	10	1/ week	Grab
Chemical Oxygen Demand	mg/l	–	Monitor	Monitor	1/ week	Grab
Zinc, Total Recoverable	mg/l	–	Monitor	Monitor	1/ week	Grab
Copper, Total Recoverable	mg/l	–	Monitor	Monitor	1/ week	Grab
Lead, Total Recoverable	mg/l	–	Monitor	Monitor	1/ week	Grab
Tin, Total	mg/l	–	Monitor	Monitor	1/ week	Grab
Total Suspended Solids	mg/l	–	Monitor	Monitor	1/ week	Grab

**THE DISCHARGE SHALL HAVE NO SHEEN, AND THERE SHALL BE NO DISCHARGE OF VISIBLE OIL, FLOATING SOLIDS OR VISIBLE FOAM IN OTHER THAN TRACE AMOUNTS.**

### Notes:

<sup>1</sup> Samples collected to comply with the monitoring requirements specified above shall be collected at the following location: At the nearest accessible location just prior to discharge and after final treatment. Unless otherwise specified, composite samples shall be time composite samples collected using automatic sampling equipment or a minimum of eight (8) equal volume grab samples collected over equal time intervals. All composite samples shall be collected for the total period of discharge not to exceed 24 hours.

<sup>2</sup> Monthly average limits apply only when a parameter is monitored more than once in a month.

<sup>3</sup> Additives, other than chlorine and detergents, to the source water such as biocides and corrosion inhibitors must be reviewed by the Department prior to their use from which a discharge occurs. The information required by Part I.D.6.a. of this permit must be provided.

## A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's NOI:

**DSN007: Discharges associated with non-contact cooling water, uncontaminated condensate, cooling tower and boiler blowdown, and demineralizer wastewater<sup>2,8,9</sup>**

Such discharge shall be limited and monitored by the permittee as specified below:

EFFLUENT CHARACTERISTIC	UNITS	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS <sup>1</sup>	
		Daily Minimum	Daily Maximum	Monthly Average	Measurement Frequency	Sample Type
Flow	gal/day	–	Monitor	Monitor	1/month	Instantaneous
pH	s.u.	6.0	8.5	–	1/month	Grab
Temperature <sup>3</sup>	°F	–	90 <sup>3</sup>	–	1/month	Grab
Total Residual Chlorine <sup>4 5 6</sup>	mg/l	–	0.013 / 0.019 <sup>4</sup>	–	1/month	Grab
Chlorides, Total <sup>7</sup>	mg/l	–	860	–	1/month	Grab
Total Dissolved Solids <sup>7</sup>	mg/l	–	Monitor	–	1/month	Grab

**THERE SHALL BE NO DISCHARGE OF DEBRIS. THE DISCHARGE SHALL HAVE NO SHEEN, AND  
THERE SHALL BE NO DISCHARGE OF VISIBLE OIL, FLOATING SOLIDS OR VISIBLE FOAM IN OTHER THAN TRACE AMOUNTS  
THE DISCHARGE SHALL OCCUR IN SUCH A MANNER AS TO NOT COME INTO CONTACT WITH SPENT ABRASIVES AND PAINT  
IN ORDER TO AVOID THE DISCHARGE OF THESE POLLUTANTS.**

**DISCHARGE RESULTING FROM THE NORMAL OPERATION OF A VESSEL WHILE BEING USED AS A MEANS OF TRANSPORTATION  
IS EXCLUDED FROM PERMITTING REQUIREMENTS.**

### Notes:

- <sup>1</sup> Samples collected to comply with the monitoring requirements specified above shall be collected at the following location: At the nearest accessible location just prior to discharge and after final treatment. Unless otherwise specified, composite samples shall be time composite samples collected using automatic sampling equipment or a minimum of eight (8) equal volume grab samples collected over equal time intervals. All composite samples shall be collected for the total period of discharge not to exceed 24 hours.
- <sup>2</sup> If necessary, the demineralizer wastewater may be diluted to meet water quality standards.
- <sup>3</sup> Discharges into the Tennessee and Cahaba Rivers including their tributaries or into that stretch of the Tallapoosa River that lies between Thurlow Dam and the confluence of the Tallapoosa and Coosa Rivers including any tributaries shall not exceed 86°F.
- <sup>4</sup> Monitoring is required during "shock chlorination", if applicable. The daily maximum limitation for total residual chlorine is 0.013 mg/l for discharges to salt waters and 0.019 mg/l for discharges to freshwater streams.
- <sup>5</sup> Monitoring is not required if the source water is free of chlorine and no chlorine is added to the cooling water system. Also if the discharge is greater than 2,500 feet from water of the state, monitoring of chlorine may not be required if the conditions of "Cooling Water Monitoring Options" of the "Notice of Intent" are met. However, the facility must code the total residual chlorine parameter on the Discharge Monitoring Report (DMR) as \*9 (monitoring is conditional not required this period)
- <sup>6</sup> A measurement of TRC below 0.05 mg/l shall be considered in compliance with the permit limitations above and should be reported as \*B on the Discharge Monitoring Report (DMR).
- <sup>7</sup> To be monitored when demineralizer wastewater is discharged or when the boiler blowdown volume exceeds 5000 GPD. The 860 mg/l chloride limit only applies to discharges to freshwater.
- <sup>8</sup> The discharge shall occur in such a manner as to not come into contact with spent abrasives and paint in order to avoid the discharge of these pollutants.
- <sup>9</sup> A discharge resulting from the normal operation of a vessel while being used as means of transportation is excluded from permitting requirements.

## A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's NOI:

**DSN009: Discharge limitations and monitoring requirements for uncontaminated storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas**

**DISCHARGES UNDER DSN009 MAY NOT MIX WITH OTHER DISCHARGES UNLESS THOSE DISCHARGES ARE PERMITTED**

**All discharges from DSN009 shall meet the following conditions:**

1. The facility will have a valid Spill Prevention, Control and Countermeasures (SPCC) plan, if required, pursuant to 40 CFR Part 112.
2. Best Management Practices (BMP) will be used to prevent pollution of storm water by spillage or leakage during petroleum and other oil handling operations and fueling operations and from equipment maintenance and storage areas. The BMP shall include at a minimum:
  - a. Twice per week inspections of the area and removal of any leaked petroleum or other oil product;
  - b. Immediate cleanup of spilled or leaked petroleum or oil product during handling operations, including fueling; and
  - c. All cleanup activities shall be conducted using dry sweep or other approaches that do not result in the creation of polluted wastewater or storm water runoff.
3. Records shall be maintained in the form of a log and shall contain the following information, as a minimum:
  - a. Date and time of twice per week inspections;
  - b. Any cleanup accomplished as a result of the inspections;
  - c. Time the cleanup was initiated and the time it was completed;
  - d. Initials of person making visual inspection and performing any cleanup; and
  - e. Description of any spillage occurring during petroleum and oil handling, which shall include the date and time of the spill, estimated volume of spill, name of the person observing the spill, date and time the spill was cleaned up, and name of the person cleaning up the spill.
4. Best Management Practices (BMP) are used in draining the diked area. BMP is defined as use of a portable oil skimmer or similar device or the use of an absorbent material to remove oil and grease (as indicated by the presence of a sheen) immediately prior to draining.
5. Monitoring records for dike drainage shall be maintained in the form of a log and shall contain the following information, at a minimum:
  - a. Date and time of discharge;
  - b. Estimated volume of discharge
  - c. Initials of person making visual inspection and authorizing the discharge
6. The discharge shall have no sheen, and there shall be no discharge of visible oil, floating solids or visible foam in other than trace amounts.
7. The permittee shall submit an **ANNUAL CERTIFICATION DMR** by January 28th of each year (but no earlier than January 1<sup>st</sup>) that reports whether all discharges were in accordance with the conditions of this permit for the previous calendar year.

### **DMR Reporting Instructions**

The Annual Certification DMR should be marked "0" (zero) if operations had not changed and all discharges were in accordance with the conditions of the permit. If conditions had changed or all discharges were not in accordance with the conditions of the permit, the DMR should be marked "1" and the facility should contact the department regarding any changes in conditions or discharge/permit noncompliance. Any noncompliance should also be reported in accordance with Part I.C.2

## A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning on the effective date of this permit and lasting through the expiration date of this permit, the permittee is authorized to discharge from the following point source(s) outfall(s), described more fully in the permittee's NOI:

### DSN010: Discharges of storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas<sup>7</sup>

Such discharge shall be limited and monitored by the permittee as specified below:

EFFLUENT CHARACTERISTIC	UNITS	DISCHARGE LIMITATIONS		MONITORING REQUIREMENTS <sup>1</sup>	
		Daily Minimum	Daily Maximum	Measurement Frequency	Sample Type
Rainfall	inches	–	Monitor	1/quarter	<sup>2</sup>
pH	s.u.	Monitor	Monitor	1/quarter	Grab
Benzene <sup>3</sup>	µg/l	–	15.5	1/quarter	Grab
Ethylbenzene <sup>4</sup>	µg/l	–	1,244	1/quarter	Grab
Toluene <sup>5</sup>	µg/l	–	8,723	1/quarter	Grab
Xylene	µg/l	–	Monitor	1/quarter	Grab
Naphthalene <sup>6</sup>	µg/l	–	620	1/quarter	Grab
Oil and Grease	mg/l	–	15	1/quarter	Grab
MTBE (Methyl Tertiary Butyl Ether)	µg/l	–	Monitor	1/quarter	Grab

**THERE SHALL BE NO DISCHARGE OF DEBRIS. THE DISCHARGE SHALL HAVE NO SHEEN, AND  
THERE SHALL BE NO DISCHARGE OF VISIBLE OIL, FLOATING SOLIDS OR VISIBLE FOAM IN OTHER THAN TRACE AMOUNTS**

#### Notes:

- <sup>1</sup> Samples collected to comply with the monitoring requirements specified above shall be collected at the following location: At the nearest accessible location just prior to discharge and after final treatment.
- <sup>2</sup> See Part IV.A.
- <sup>3</sup> The limit for benzene shall be 1.12 µg/l if the discharge is to a body of water which is designated as a public water supply or within a 24-hour travel time to a body of water designated as a Public Water Supply (PWS).
- <sup>4</sup> The limit for ethylbenzene shall be 448 µg/l if the discharge is to a body of water which is designated as a public water supply or within a 24-hour travel time to a body of water designated as a PWS.
- <sup>5</sup> The limit for toluene shall be 1,206 µg/l if the discharge is to a body of water which is designated as a public water supply or within a 24-hour travel time to a body of water designated as a PWS.
- <sup>6</sup> To be monitored only at facilities which handle diesel fuel, aviation fuel, or jet fuel.
- <sup>7</sup> For facilities to have DSN009 in lieu of DSN010, they must have BMPs and other procedures in place which address the fueling area and the petroleum storage area, they must have a valid SPCC Plan, if required by 40 CFR Part 112, and they must be determined by the Department to not have a significant potential for environmental impact.

**A. DISCHARGE LIMITATIONS AND MONITORING REQUIREMENTS**

**Discharge Monitoring Requirements applicable to all storm water discharges.**

Monitoring of one storm water outfall within a designed drainage area as representative of the remaining outfalls, may be allowed if the applicant submits certification that the discharges are essentially the same. If at a later date the discharges are determined to be dissimilar or if pollutant concentrations are such that water quality standards are contravened, then monitoring of all discharges may be required.

## **B. DISCHARGE MONITORING AND RECORD KEEPING REQUIREMENTS**

### **1. Representative Sampling**

Samples and measurements taken as required herein shall be representative of the volume and nature of the monitored discharge and shall be in accordance with the provisions of this permit.

### **2. Test Procedures**

For the purpose of reporting and compliance, permittees shall use one of the following procedures:

- a. For parameters with an EPA established Minimum Level (ML), report the measured value if the analytical result is at or above the ML and report "0" or "\*\*B" for values below the ML. Test procedures for the analysis of pollutants shall conform to 40 CFR Part 136 and guidelines published pursuant to §304(h) of the FWPCA, 33 U.S.C. §1314(h). If more than one method for analysis of a substance is approved for use, a method having a minimum level lower than the permit limit shall be used. If the minimum level of all methods is higher than the permit limit, the method having the lowest minimum level shall be used and a report of less than the minimum level shall be reported as zero and will constitute compliance, however, should EPA approve a method with a lower minimum level during the term of this permit the permittee shall use the newly approved method.
- b. For pollutants parameters without an established ML, an interim ML may be utilized. The interim ML shall be calculated as 3.18 times the Method Detection Level (MDL) calculated pursuant to 40 CFR Part 136, Appendix B.

Permittees may develop an effluent matrix-specific ML, where an effluent matrix prevents attainment of the established ML. However, a matrix specific ML shall be based upon proper laboratory method and technique. Matrix-specific MLs must be approved by the Department, and may be developed by the permittee during permit issuance, reissuance, modification, or during compliance schedule.

In either case the measured value should be reported if the analytical result is at or above the ML and "0" or "\*\*B" reported for values below the ML.

- c. For parameters without an EPA established ML, interim ML, or matrix-specific ML, a report of less than the detection limit shall constitute compliance if the detection limit of all analytical methods is higher than the permit limit. For the purpose of calculating a monthly average, "0" shall be used for values reported less than the detection limit.

The Minimum Level utilized for procedures A and B above shall be reported on the permittee's DMR. When an EPA approved test procedure for analysis of a pollutant does not exist, the Director shall approve the procedure to be used.

### **3. Recording of Results**

For each measurement or sample taken pursuant to the requirements of this permit, the permittee shall record the following information:

- a. The facility name and location, point source number, date, time and exact place of sampling;
- b. The name(s) of person(s) who obtained the samples or measurements;
- c. The dates and times the analyses were performed;
- d. The name(s) of the person(s) who performed the analyses;
- e. The analytical techniques or methods used, including source of method and method number; and
- f. The results of all required analyses.

### **4. Records Retention and Production**

- a. The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by the permit, and records of all data used to complete the above reports or the NOI for this permit, for a period of at least three years from the date of the sample measurement, report or NOI. This period may be

extended by request of the Director at any time. If litigation or other enforcement action, under the AWPCA and/or the FWPCA, is ongoing which involves any of the above records, the records shall be kept until the litigation is resolved. Upon the written request of the Director or his designee, the permittee shall provide the Director with a copy of any record required to be retained by this paragraph. Copies of these records shall not be submitted unless requested.

- b. All records required to be kept for a period of three years shall be kept at the permitted facility or an alternate location approved by the Department in writing and shall be available for inspection. A complete copy of the permit, the Best Management Practices (BMP) Plan, most recent BMP inspection records, and, if applicable, a Spill Prevention, Control, and Countermeasures (SPCC) Plan shall be maintained at the facility. The past three years of DMRs, laboratory records, and historical BMP inspection and training records may be kept at an alternate Alabama location if approved by the Department.

## 5. Monitoring Equipment and Instrumentation

All equipment and instrumentation used to determine compliance with the requirements of this permit shall be installed, maintained, and calibrated in accordance with the manufacturer's instructions or, in the absence of manufacturer's instructions, in accordance with accepted practices. At a minimum, flow measurement devices shall be calibrated at least once every 12 months.

## C. DISCHARGE REPORTING REQUIREMENTS

### 1. Reporting of Monitoring Requirements

- a. This permit requires weekly, semi-monthly, monthly, quarterly, semiannual, and annual self-monitoring. The permittee shall conduct the required monitoring in accordance with the following schedule:

**MONITORING REQUIRED MONTHLY AND MORE FREQUENTLY THAN MONTHLY** shall be conducted during the first full month following the effective date of initial coverage under this permit and every month thereafter.

**QUARTERLY MONITORING** shall be conducted at least once during each calendar quarter. Calendar quarters are the periods of January through March, April through June, July through September, and October through December. The permittee shall conduct the quarterly monitoring during the first full quarter following the effective date of initial coverage and each quarter thereafter.

**SEMIANNUAL MONITORING** shall be conducted at least once during the period of January through June and at least once during the period of July through December. The permittee shall conduct the semiannual monitoring during the first complete six-month period following the effective date of initial coverage and each six-month period thereafter.

**ANNUAL MONITORING** shall be conducted at least once during the period of January through December. If six or more months are remaining in the first monitoring period after initial coverage, the annual monitoring shall be conducted and then once each twelve-month period thereafter.

If the permit coverage is a reissuance, then the permittee shall continue to submit DMRs in accordance with the requirements of their previous permit coverage until such time as DMRs are due as discussed in Part I. C. 1. b.

- b. The permittee shall submit discharge monitoring reports (DMRs) in accordance with the following schedule:

**REPORTS OF MORE FREQUENTLY THAN MONTHLY, MONTHLY, QUARTERLY, AND SEMIANNUAL MONITORING** shall be submitted on a semiannual basis. The semiannual reports shall be submitted so that they are received by the Department no later than the 28<sup>th</sup> day of July and the 28<sup>th</sup> day of January, unless otherwise directed by the Department. Each submittal shall report results of all testing performed during the six-month period preceding the reporting month. For example, the semiannual report due on January 28 should report the results of testing conducted during the months of July through December.

**REPORTS OF ANNUAL TESTING** shall be submitted on an annual basis. The annual reports shall be submitted so that they are received by the Department no later than the 28<sup>th</sup> day of January unless otherwise directed by the Department. Each submittal shall report results of all annual testing performed during the twelve month period preceding the reporting month. For example, the annual report due on January 28 should report the results of testing conducted during the previous months of January through December.

- c. Except as allowed by Provision I.C.1.c.(1) or (2), the permittee shall submit all Discharge Monitoring Reports (DMRs) required by Provision I.C.1.b. by utilizing the Department's web-based system.

- (1) If the permittee is unable to complete the electronic submittal of DMR data due to technical problems originating with the Department's web-based system (this could include entry/submittal issues with an entire set of DMRs or individual parameters), the permittee is not relieved of their obligation to submit DMR data to the Department by the date specified in Provision I.C.1.b., unless otherwise directed by the Department.

If the Department's web-based system is down on the 28<sup>th</sup> day of the month in which the DMR is due or is down for an extended period of time, as determined by the Department, when a DMR is required to be submitted, the permittee may submit the data in an alternate manner and format acceptable to the Department. Preapproved alternate acceptable methods include faxing, e-mailing, mailing, or hand-delivery of data such that they are received by the required reporting date. Within five calendar days of the Department's web-based system resuming operation, the permittee shall enter the data into the Department's web-based system, unless an alternate timeframe is approved by the Department.

- (2) The permittee may submit a request to the Department for a temporary electronic reporting waiver for DMR submittals. The waiver request should include the permit number; permittee name; facility/site name; facility address; name, address, and contact information for the responsible official or duly authorized representative; a detailed statement regarding the basis for requesting such a waiver; and the duration for which the waiver is requested. Approved electronic reporting waivers are not transferrable.

Permittees with an approved electronic reporting waiver for DMRs may submit hard copy DMRs for the period that the approved electronic reporting waiver request is effective. The permittee shall submit the Department-approved DMR forms to the address listed in Provision I.C.1.e.

- (3) If a permittee is allowed to submit a hard copy DMR, the DMR must be legible and bear an original signature. Photo and electronic copies of the signature are not acceptable and shall not satisfy the reporting requirements of this permit.
- (4) If the permittee, using approved analytical methods as specified in Provision I.B.2, monitors any discharge from a point source for a limited substance identified in Provision I.A. of this permit more frequently than required by this permit, the results of such monitoring shall be included in the calculation and reporting of values on the DMR and the increased frequency shall be indicated on the DMR.
- (5) In the event no discharge from a point source identified in Provision I.A. of this permit and described more fully in the permittee's NOI occurs during a monitoring period, the permittee shall report "No Discharge" for such period on the appropriate DMR.
- d. All reports and forms required to be submitted by this permit, the AWPCA and the Department's Rules and Regulations, shall be electronically signed (or, if allowed by the Department, traditionally signed) by a "responsible official" of the permittee as defined in ADEM Administrative Code Rule 335-6-6-.09 or a "duly authorized representative" of such official as defined in ADEM Administrative Code Rule 335-6-6-.09 and shall bear the following certification:

***"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."***

- e. Discharge Monitoring Reports required by this permit, the AWPCA, and the Department's Rules that are being submitted in hard copy shall be addressed to:

**Alabama Department of Environmental Management  
Water Division  
Office of Water Services  
Post Office Box 301463  
Montgomery, Alabama 36130-1463**

Certified and Registered Mail containing Discharge Monitoring Reports shall be addressed to:

**Alabama Department of Environmental Management  
Water Division  
Office of Water Services  
1400 Coliseum Boulevard  
Montgomery, Alabama 36110-2400**

- f. All other correspondence and reports required to be submitted by this permit, the AWPCA, and the Department's Rules shall be addressed to:

**Alabama Department of Environmental Management  
Water Division  
Post Office Box 301463  
Montgomery, Alabama 36130-1463**

Certified and Registered Mail shall be addressed to:

**Alabama Department of Environmental Management  
Water Division  
1400 Coliseum Boulevard  
Montgomery, Alabama 36110-2400**

## **2. Noncompliance Notification**

- a. If for any reason, the permittee's discharge (1) does not comply with any daily minimum or maximum discharge limitation for an effluent characteristic specified in Provision I. A. of this permit which is denoted by an "(X)", (2) threatens human health or welfare, fish or aquatic life, or water quality standards, (3) does not comply with an applicable toxic pollutant effluent standard or prohibition established under Section 307(a) of the FWPCA, 33 U.S.C. Section 1317(a), (4) contains a quantity of a hazardous substance which has been determined may be harmful to public health or welfare under Section 311(b)(4) of the FWPCA, 33 U.S.C. Section 1321(b)(4), (5) exceeds any discharge limitation for an effluent characteristic as a result of an unanticipated bypass, upset, (6) is an unpermitted direct or indirect discharge of a pollutant to a water of the state (unpermitted discharges properly reported to the Department under any other requirement are not required to be reported under this provision), the permittee shall orally report the occurrence and circumstances of such discharge to the Director within 24-hours after the permittee becomes aware of the occurrence of such discharge. In addition to the oral report, the permittee shall submit to the Director electronically a report (or if acceptable to the Department a written report) as provided in Provision I. C. 2. c. no later than five (5) days after becoming aware of the occurrence of such discharge.
- b. If for any reason, the permittee's discharge does not comply with any limitation of this permit, the permittee shall submit to the Director a written report as provided in Provision I. C. 2. c. below, such report shall be submitted with the next Discharge Monitoring Report required to be submitted by Provision I. C. 1. of this permit after becoming aware of the occurrence of such noncompliance.
- c. Any electronic report (or if acceptable to the Department a written report) required to be submitted to the Director by Provision I. C. 2 a. or b. shall be submitted using a copy of the Department's Noncompliance Notification Form and shall include the following information:
- (1) A description of the discharge and cause of noncompliance;
  - (2) The period of noncompliance, including exact dates and times or, if not corrected, the anticipated time the noncompliance is expected to continue; and
  - (3) A description of the steps taken and/or being taken to reduce or eliminate the noncomplying discharge and to prevent its recurrence.

## **D. OTHER REPORTING AND NOTIFICATION REQUIREMENTS**

### **1. Anticipated Noncompliance**

The permittee shall give the Director written advance notice of any planned changes or other circumstances regarding a facility, which may result in noncompliance with permit requirements. This information must be submitted electronically unless acceptable to the Department to submit otherwise.

### **2. Termination of Discharge**

The permittee shall notify the Director, when any point source discharges authorized by this permit have permanently ceased, by submitting a permit termination request electronically through the Department's web-based system. This notification shall serve as sufficient cause for instituting procedures for termination of the permittee's authority to discharge under this General Permit.

### **3. Updating Information**

- a. The permittee shall inform the Director of any change in the permittee's mailing address or telephone number or in the permittee's designation of a facility contact or office having the authority and responsibility to prevent and abate violations of the AWPCA, the Department's Rules and the terms and conditions of this permit, in writing, no later than ten (10) days after such change. Upon request of the Director or his designee, the permittee shall furnish the Director with an update of any information provided in the NOI.
- b. If the permittee becomes aware that it failed to submit any relevant facts in the NOI, or submitted incorrect information in the NOI; or in any report to the Director, it shall promptly submit such facts or information with a written explanation for the mistake and/or omission. This information must be submitted electronically unless acceptable to the Department to submit otherwise.

### **4. Duty to Provide Information**

- a. Any permittee shall furnish to the Director, within a reasonable time, any information which the Director or his designee may request to determine whether cause exists for suspending or revoking the permittee's authorization to discharge under this General Permit, in whole or in part, or to determine compliance with this permit or to determine if the permittee should be required to apply for an individual permit.
- b. Any or all permittees shall furnish to the Director, within a reasonable time, any information which the Director or his designee may request to determine whether cause exists for modifying or terminating this permit.

### **5. New or Increased Discharges**

If there is an increase in pollution potential of the discharges from the permittee's facility the permittee must notify the Director in writing. The Director may at his discretion determine under Part II.F. of this permit what action if any will be taken.

### **6. Cooling Water, Boiler Water, and other Waste Water Additives**

- a. The permittee shall notify the Director in writing not later than sixty (60) days prior to instituting the use of any biocide corrosion inhibitor or chemical additive, not identified in the NOI, from which discharge is allowed by this permit. Such notification shall include:
  - (1) name and general composition of biocide or chemical;
  - (2) 48-hour or 96-hour LC50 data for the fathead minnow (*Pimephales promelas*) and cladoceran (*Ceriodaphnia dubia*) for fresh water discharges. For salt water, the mysid shrimp and sheepshead minnow or inland silverside. Other acceptable aquatic organisms may be allowed by the Department if sufficient information is submitted;
  - (3) quantities to be used;
  - (4) frequencies of use;
  - (5) maximum proposed discharge concentrations; and,
  - (6) EPA registration number, if applicable.

- b. The use of a biocide or additive containing tributyl tin, tributyl tin oxide, zinc, chromium or related compounds in discharges regulated by this permit is prohibited. The use of any additive not identified in this permit or in the NOI for coverage for this permit prior to a determination by the Department that permit modification to control discharge of the additive is not required or prior to issuance of a permit modification controlling discharge of the additive is prohibited.

#### **E. SCHEDULE OF COMPLIANCE**

1. The permittee shall achieve compliance with the discharge limitations specified in Provision I. A. in accordance with the following schedule:

##### **COMPLIANCE SHALL BE ACHIEVED ON THE EFFECTIVE DATE OF COVERAGE UNDER THIS PERMIT**

2. If required, no later than 14 calendar days following a date identified in the above schedule of compliance, the permittee shall submit either a report of progress or, in the case of specific actions being required by identified dates, a written notice of compliance or noncompliance. In the latter case, the notice shall include the cause of noncompliance, any remedial actions taken, and the probability of meeting the next scheduled requirement. This information must be submitted electronically unless acceptable to the Department to submit otherwise.

## **PART II: OTHER REQUIREMENTS, RESPONSIBILITIES, AND DUTIES**

### **A. REQUIREMENTS FOR COVERAGE UNDER THIS GENERAL PERMIT**

#### **1. Notice of Intent**

- a. Any person wishing to be permitted to discharge under this General Permit shall submit a Notice of Intent (NOI) to be covered by this General Permit at least 30 days prior to the date of desired coverage. No discharge authorized under this General Permit may commence until the discharger receives the Director's acknowledgement of the NOI and approval of the coverage of the discharge by this General Permit. The Director's acknowledgement shall include a copy of this General Permit.
- b. The permittee must complete and submit all Departmental forms, including the NOI, utilizing the Department's web-based system unless the permittee submits in writing valid justification as to why the electronic submittal process cannot be utilized and the Department approves in writing utilization of hard copy submittals. For approved hard copy submissions, the Departmental forms are available on ADEM's webpage at <http://adem.alabama.gov/DeptForms/default.cnt>.
- c. Any person discharging to a municipal storm sewer, sanitary sewer or combination sewer must notify the municipality by letter of the discharge.

#### **2. Content of Notice of Intent**

- a. A description of the process generating the discharge for which coverage is desired. This description shall be in sufficient detail to allow the Director to determine that the discharge is included in the category permitted by this General Permit;
- b. The latitude and longitude of the discharge points for each discharge and the name of the waterbody receiving each discharge for which coverage under this General Permit is desired; and
- c. A contact person, address and phone number for the facility or activity to be covered under this General Permit;
  - (1) The NOI shall be electronically signed (or if acceptable to the Department traditionally signed) by a person meeting the requirements for signatories to permit application under ADEM Administrative Code Rule 335-6-6-.09 and the person signing the NOI shall make the certification required for submission of documents under ADEM Administrative Code Rule 335-6-6.09.
  - (2) Signatories to reports, discharge monitoring reports and any other submissions required by this General Permit shall be signed in accordance with the requirements of ADEM Administrative Code Rule 335-6-6.09.

### **B. OPERATIONAL AND MANAGEMENT REQUIREMENTS**

#### **1. Facilities Operation and Maintenance**

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of the permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities only when necessary to achieve compliance with the conditions of the permit.

#### **2. Best Management Practices**

- a. Dilution water shall not be added to achieve compliance with discharge limitations except when the Director or his designee has granted prior written authorization for dilution to meet water quality requirements.
- b. The permittee shall prepare, implement, and maintain a Spill Prevention, Control and Countermeasures (SPCC) Plan in accordance with 40 CFR Part 112 if required thereby.
- c. The permittee shall prepare and implement a Best Management Practices (BMP) Plan according to Part IV of this permit.

### **3. Spill Prevention, Control, and Management**

The permittee shall provide spill prevention, control, and/or management sufficient to prevent any spills of pollutants from entering a water of the state or a publicly or privately owned treatment works. Any containment system used to implement this requirement shall be constructed of materials compatible with the substance(s) contained and which shall prevent the contamination of groundwater and such containment system shall be capable of retaining a volume equal to 110 percent of the capacity of the largest tank for which containment is provided.

## **C. OTHER RESPONSIBILITIES**

### **1. Duty to Mitigate Adverse Impacts**

The permittee shall promptly take all reasonable steps to mitigate and minimize or prevent any adverse impact on human health or the environment resulting from noncompliance with any discharge limitation of this permit, including such accelerated or additional monitoring of the discharge and/or the receiving waterbody as necessary to determine the nature and impact of the noncomplying discharge.

### **2. Right of Entry and Inspection**

The permittee shall allow the Director, or an authorized representative, upon the presentation of proper identification to:

- a. Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of the permit;
- b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
- c. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under the permit; and
- d. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the AWPCA, any substances or parameters at any location.

## **D. BYPASS AND UPSET**

### **1. Bypass**

- a. Any bypass is prohibited except as provided in b. and c. below:
- b. A bypass is not prohibited if:
  - (1) It does not cause any discharge limitation specified in Provision I. A. of this permit to be exceeded;
  - (2) It is necessary for essential maintenance of a treatment or control facility or system to assure efficient operation of such facility or system; or
  - (3) It is part of the storm water control system when the intention of the design, as approved by the Director, is to contain the first flush only.
- c. A bypass is not prohibited and need not meet the discharge limitations specified in Provision I. A. of this permit if:
  - (1) It is unavoidable to prevent loss of life, personal injury, or severe property damage;
  - (2) There are no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime (this condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgement to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance); and
  - (3) The permittee submits a written request for authorization to bypass to the Director at least ten (10) days prior to the anticipated bypass (if possible), the permittee is granted such authorization, and the permittee complies with any conditions imposed by the Director to minimize any adverse impact on human health or

the environment resulting from the bypass. This request must be submitted electronically unless acceptable to the Department to submit otherwise.

- d. The permittee has the burden of establishing that each of the conditions of Provision II. D. 1. b. or c. have been met to qualify for an exception to the general prohibition against bypassing contained in a. and an exemption, where applicable, from the discharge limitations specified in Provision I. A. of this permit.

## **2. Upset**

- a. A discharge which results from an upset need not meet the discharge limitations specified in Provision I. A. of this permit if:
  - (1) No later than 24-hours after becoming aware of the occurrence of the upset, the permittee orally reports the occurrence and circumstances of the upset to the Director or his designee; and
  - (2) No later than five (5) days after becoming aware of the occurrence of the upset, the permittee furnishes the Director with evidence, including properly signed, contemporaneous operating logs, or other relevant evidence, demonstrating that (i) an upset occurred; (ii) the permittee can identify the specific cause(s) of the upset; (iii) the permittee's facility was being properly operated at the time of the upset; and (iv) the permittee promptly took all reasonable steps to minimize any adverse impact on human health or the environment resulting from the upset.
- b. The permittee has the burden of establishing that each of the conditions of Provision II D. 2. a. of this permit have been met to qualify for an exemption from the discharge limitations specified in Provision I. A. of this permit.

## **E. DUTY TO COMPLY WITH PERMIT, RULES, AND STATUTES**

### **1. Duty to Comply**

- a. The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the AWPCA and the FWPCA and is grounds for: enforcement action, termination, or suspension of authorization under this permit; denial of a permit reissuance NOI; a requirement that permittee submit an NOI for an individual NPDES permit.
- b. The necessity to halt or reduce production or other activities in order to maintain compliance with the conditions of the permit shall not be a defense for a permittee in an enforcement action.
- c. The discharge of a pollutant from a source not specifically identified in the NOI to be covered under this General Permit and not specifically included in the description of an outfall in this permit is not authorized and shall constitute noncompliance with this permit.
- d. The permittee shall take all reasonable steps, including cessation of production or other activities, to minimize or prevent any violation of this permit or to minimize or prevent any adverse impact of any permit violation.

### **2. Removed Substances**

Solids, sludges, filter backwash, or any other pollutant or other waste removed in the course of treatment or control of storm waters and/or process water shall be disposed of in a manner that complies with all applicable Department Rules.

### **3. Loss or Failure of Treatment Facilities**

Upon the loss or failure of any treatment facility, including but not limited to the loss or failure of the primary source of power of the treatment facility, the permittee shall, where necessary to maintain compliance with the discharge limitations specified in Provision I. A. of this permit, or any other terms or conditions of this permit, cease, reduce, or otherwise control production and/or all discharges until treatment is restored.

### **4. Compliance with Statutes and Rules**

- a. This permit has been issued under ADEM Administrative Code, Chapter 335-6-6. All provisions of this chapter, that are applicable to this permit, are hereby made a part of this permit. A copy of this chapter may be obtained on the Department's website or for a small charge from the Office of General Counsel, Alabama Department of Environmental Management, 1400 Coliseum Boulevard, Montgomery, AL 36110.

- b. This permit does not authorize the noncompliance with or violation of any Laws of the State of Alabama or the United States of America or any regulations or rules implementing such laws. FWPCA, 33 U.S.C. Section 1319, and Code of Alabama 1975, Section 22-22-14.

## **F. PERMIT TRANSFER, MODIFICATION, SUSPENSION, REVOCATION, REISSUANCE, AND TERMINATION**

### **1. Duty to Reapply or Notify of Intent to Cease Discharge**

- a. The permittee authorized to discharge under this General Permit, who wishes to continue to discharge upon the expiration of this permit, shall submit an NOI to request reissuance of coverage under the reissued General Permit. Such NOI shall be submitted at least 90 days prior to the expiration date of this General Permit. The permittee shall electronically submit the NOI utilizing the Department's web-based system, unless the permittee submits in writing valid justification as to why the electronic submittal process cannot be utilized, and the Department approves in writing the utilization of hard copy submittals.
- b. Failure of the permittee to submit the appropriate NOI material for reauthorization under this permit at least 90 days prior to the permit's expiration will void the automatic continuation of the authorization to discharge under this permit as provided by ADEM Administrative Code Rule 335-6-6-.06. Should the permit not be reissued for any reason prior to its expiration date, permittees who failed to meet the 90-day submittal deadline will be illegally discharging without a permit after the expiration date of the permit.

### **2. Change in Discharge**

- a. The permittee shall give notice to the Director at least 90 days in advance of any facility expansion, production increase, process change, or other action that could result in:
  - (1) The discharge of additional pollutants;
  - (2) The increase in the quantity of any discharge such that existing permit limitations would be exceeded;
  - (3) Or that could result in an additional discharge point.

This requirement applies to pollutants that are or that are not subject to discharge limitations in this permit. No new or increased discharge may begin until the Director has reviewed the information and taken appropriate action to authorize the discharge under this General Permit, or until such time as an appropriate action has been taken to authorize the discharge under an individual permit.

- b. The permittee shall notify the Director as soon as it is known or there is reason to believe:
  - (1) That any activity has occurred or will occur which would result in the discharge on a routine or frequent basis, of any toxic pollutant which is not limited in this permit, if that discharge will exceed the highest of the following notification levels:
    - (a) One hundred micrograms per liter;
    - (b) Two hundred micrograms per liter for acrolein and acrylonitrile; five hundred micrograms per liter for 2,4-dinitrophenol and for 2-methyl-4,6-dinitrophenol; and one milligram per liter for antimony;
    - (c) Five times the maximum concentration value reported for that pollutant in the permit NOI; or
  - (2) That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following notification levels:
    - (a) Five hundred micrograms per liter;
    - (b) One milligram per liter for antimony;
    - (c) Ten times the maximum concentration value reported for that pollutant in the permit NOI.

### 3. Transfer of Permit or Change in Name

This permit may not be transferred or the name of the permittee changed without notice to the Director and subsequent modification or revocation and reissuance of the permit to identify the new permittee and to incorporate any other changes as may be required under the FWPCA or AWPCA.

- a. In the case of a change in ownership or control of the permittee's premises only, a request for permit transfer must be submitted electronically through the Department's web-based system at least 30 days prior to the change.
- b. In the case of a change in ownership or control of the permittee's premises accompanied by a change or proposed change in effluent characteristics, a complete NOI is required to be submitted to the Director electronically through the Department's web-based system at least 90 days prior to the change.
- c. In the case of a change in Permittee Name or Facility Name only, a request for permit name change must be submitted electronically through the Department's web-based system at least 30 days prior to the change.

Whenever the Director is notified of a change in ownership or control, he may decide not to modify the existing permit and require the submission of a new permit NOI.

### 4. Permit Modification, Revocation and Reissuance (of Modified General or Individual), and Termination

- a. During the term of this General Permit the Director may, for cause, and subject to the public notice procedure of ADEM Administrative Code, Rule 335-6-6-.21, modify or revoke and reissue this General Permit, or terminate it and require all those authorized under it to apply for individual NPDES permits. The causes for this action include but are not limited to the causes listed below:
  - (1) There are material and substantial alterations or additions to the facility or activity generating the discharges which occurred after permit issuance which justify the application of permit conditions that are different or absent in the existing permit;
  - (2) When the Director receives any information that was not available at the time of permit issuance and that would have justified the application of different permit conditions at the time of issuance;
  - (3) When the standards or regulations on which the permit was based have been changed by promulgation of amended standards or regulations or by judicial decision after the permit was issued;
  - (4) Upon the failure of the state to notify, as required by Section 402(b)(3) of the FWPCA, another state whose waters may be affected by a discharge;
  - (5) When the level of discharge of any pollutant which is not limited in the permit exceeds the level which can be achieved by the technology based treatment requirements appropriate to discharge under 40 CFR 125.3(c);
  - (6) To correct technical mistakes, such as errors in calculation, clerical errors or mistaken interpretations of law made in determining permit conditions;
  - (7) If the permit limitations are found not to be protective of water quality standards;
  - (8) To incorporate an applicable 307(a) FWPCA toxic effluent standard or prohibition;
  - (9) When required by the reopener conditions in this permit, and
  - (10) For any applicable cause set forth in ADEM Administrative Code Rule 335-6-6-.17.
- b. Subject to the public notice procedures of ADEM Administrative Code Rule 335-6-6-.21, the Director may terminate this General Permit during its term for any of the causes for modification listed in Part II.F.4.a.
- c. The Director may terminate authorization to discharge under this General Permit for cause. Cause shall include but not be limited to:
  - (1) Noncompliance with the permit;
  - (2) Noncompliance with Department Rules;

- (3) A finding that this General Permit does not control the discharges sufficiently to protect water quality or comply with treatment based limits applicable to the discharge;
  - (4) The permittee's misrepresentation or failure to disclose fully all relevant facts in the permit NOI or during the permit issuance process or the permittee's misrepresentation of any relevant facts at any time;
  - (5) Materially false or inaccurate statements or information in the permit NOI or the permit;
  - (6) A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge;
  - (7) The permittee's discharge threatens human life or welfare;
  - (8) Permanent closure of the facility generating the wastewater permitted to be discharged by this permit or permanent cessation of wastewater discharge; and
  - (9) New or revised requirements of any applicable standard or limitation that is promulgated under Sections 301(b)(2)(C),(D),(E),and (F), and 307(a)(2) of the FWPCA that the Director determines cannot be complied with by the permittee.
- d. If the permittee believes that any past or planned activity would be cause for modification or revocation and reissuance of this General Permit under ADEM Administrative Code Rule 335-6-6-.23 (7), or termination and issuance of an individual permit under ADEM Administrative Code Rule 335-6-6-.23 (9) the permittee must report such information to the Permit Issuing Authority. The submittal of a new NOI may be required of the permittee. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned change, anticipated noncompliance or application for an individual permit, does not stay any permit condition.

**5. Issuance by the Director of an Individual NPDES Permit to a Person Eligible for Coverage or Covered by This General Permit.**

- a. The Director may require any person, otherwise eligible for coverage under this General Permit, to apply for an individual NPDES permit by notifying that person that an application is required. Notification shall consist of a written description of the reason(s) for the decision, appropriate permit application forms and directions, and a statement informing the person that coverage by this General permit shall automatically terminate upon issuance of the individual permit. Reasons for this requirement may be:
- (1) Noncompliance with the General Permit;
  - (2) Noncompliance with Department Rules;
  - (3) A change has occurred in the availability of demonstrated technology or practices for the control or abatement of pollutants applicable to the wastewater being discharged;
  - (4) Effluent guidelines are promulgated for a point source(s) covered by the General Permit;
  - (5) A water quality management plan applicable to the wastewater being discharged under this General Permit;
  - (6) Circumstances have changed since the time of the request to be covered so that the discharger is no longer appropriately controlled under this General Permit or either a temporary reduction or permanent reduction or elimination of the authorized discharge is necessary;
  - (7) Standards for sewage sludge use or disposal have been promulgated for the sludge use or disposal practice covered by this General Permit;
  - (8) The discharge(s) is a significant contributor of pollutants. In making this decision the Director may consider:
    - (a) the location of the discharges with respect to waters of the state,
    - (b) the size of the discharger, and
    - (c) the quantity and nature of the pollutants discharged to waters of the state.

- (9) A determination that the water of the state receiving the discharge is not meeting applicable water quality standards.

**6. Request for an Individual NPDES Permit by a Person Covered Under This General Permit.**

- a. Any person covered by this General Permit may apply for termination of coverage by applying for an individual NPDES permit.
- b. A permit NOI submitted voluntarily or at the direction of the Director for the purpose of termination of coverage by this General Permit shall be processed in accordance with the rules found in ADEM Administrative Code 335-6-6 applicable to individual permits.
- c. Any person may petition the Director for withdrawal of this General Permit authority from a discharger. The Director shall consider the information submitted by the petitioner and any other information he may be aware of and may obtain additional information from the discharger and through inspections by Department staff and shall decide if coverage should be withdrawn. The petitioner shall be informed of the Director's decision and shall be provided a summary of the information considered.

**7. Request for Permit Action Does Not Stay Any Permit Requirement**

The filing of a request by the permittee for any permit action such as termination, or application for individual permit or any other action, does not stay any permit term or condition.

**G. COMPLIANCE WITH TOXIC POLLUTANT STANDARD OR PROHIBITION**

If any applicable effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under Section 307(a) of the FWPCA, 33 U.S.C. Section 1317(a), for a toxic pollutant discharged by the permittee and such standard or prohibition is more stringent than any discharge limitation on the pollutant specified in Provision I. A. of this permit, or controls a pollutant not limited in Provision I. A. of this permit, this permit shall be modified to conform to the toxic pollutant effluent standard or prohibition and the permittee shall be notified of such modification. If this permit has not been modified to conform to the toxic pollutant effluent standard or prohibition before the effective date of such standard or prohibition, the permittee shall attain compliance with the requirements of the standard or prohibition within the time period required by the standard or prohibition and shall continue to comply with the standard or prohibition until this permit is modified or reissued.

**H. DISCHARGE OF WASTEWATER GENERATED BY OTHERS**

The discharge of wastewater, generated by any process, facility, or by any other means not under the operational control of the permittee or not identified in the NOI for this permit or not identified specifically in the description of an outfall in this permit is not authorized by this permit.

## **PART III: OTHER PERMIT CONDITIONS**

### **A. CIVIL AND CRIMINAL LIABILITY**

#### **1. Tampering**

Any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained or performed under the permit shall, upon conviction, be subject to penalties as provided by the AWPCA.

#### **2. False Statements**

Any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance shall, upon conviction, be subject to penalties as provided by the AWPCA.

#### **3. Permit Enforcement**

- a. Any NPDES permit issued or reissued by the Department is a permit for the purpose of the AWPCA and the FWPCA and as such any terms, conditions, or limitations of the permit are enforceable under state and federal law and as described under Rule 335-6-6-.18.
- b. Any person required to have a NPDES permit pursuant to ADEM Administrative Code Chapter 335-6-6 and who discharges pollutants without said permit, who violates the conditions of said permit, who discharges pollutants in a manner not authorized by the permit, or who violates applicable orders of the Department or any applicable rule or standard of the Department, is subject to any one or combination of the following enforcement actions under applicable state statutes.
  - (1) An administrative order requiring abatement, compliance, mitigation, cessation, clean-up, and/or penalties;
  - (2) An action for damages;
  - (3) An action for injunctive relief; or
  - (4) An action for penalties.

#### **4. Relief From Liability**

Except as provided in Provision II. D. 1. (Bypass) and Provision II. D. 2. (Upset), nothing in this permit shall be construed to relieve the permittee of civil or criminal liability under the AWPCA or FWPCA for noncompliance with any term or condition of this permit.

### **B. OIL AND HAZARDOUS SUBSTANCE LIABILITY**

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities or penalties to which the permittee is or may be subject under Section 311 of the FWPCA, 33 U.S.C. Section 1321.

### **C. PROPERTY AND OTHER RIGHTS**

This permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to persons or property or invasion of other private rights, or any infringement of federal, state, or local laws or regulations, nor does it authorize or approve the construction of any physical structures or facilities or the undertaking of any work in any waters of the state or of the United States.

### **D. AVAILABILITY OF REPORTS**

Except for data determined to be confidential under Code of Alabama 1975, Section 22-22-9(c), all reports prepared in accordance with the terms of this permit shall be available for public inspection at the offices of the Department. Effluent data shall not be considered confidential.

### **E. COMPLIANCE WITH WATER QUALITY STANDARDS**

1. The permittee may be required by the Director to apply for an individual permit, if the Director determines that discharge under this General Permit causes a violation of a water quality standard or stream use classification.

2. Compliance with permit terms and conditions notwithstanding, if the permittee's discharge(s) from point sources identified in Provision I. A. of this permit cause or contribute to a condition in contravention of state water quality standards, the Department may require the permittee to take abatement action or apply for an individual permit pursuant to the Department's Rules, or both.
3. If the Department determines, on the basis of a notice provided pursuant to this permit or any investigation, inspection or sampling, that a modification of this permit is necessary to assure maintenance of water quality standards or compliance with other provisions of the AWPCA or FWPCA, the Department may require such modification.

#### F. GROUNDWATER

Unless specifically authorized under this permit, this permit does not authorize the discharge of pollutants to groundwater. Should a threat of groundwater contamination occur, the Director may require groundwater monitoring to properly assess the degree of the problem and the Director may require that the permittee undertake measures to abate any such discharge and/or contamination.

#### G. DEFINITIONS

1. *Authorization* – means granted the privilege of discharging under the terms of this General Permit.
2. *Average monthly discharge limitation* - means the highest allowable average of "daily discharges" over a calendar month, calculated as the sum of all "daily discharges" measured during a calendar month divided by the number of "daily discharges" measured during that month (zero discharge days shall not be included in the number of "daily discharges" measured and a less than detectable test result shall be treated as a concentration of zero if the most sensitive EPA approved method was used).
3. *Average weekly discharge limitation* - means the highest allowable average of "daily discharges" over a calendar week, calculated as the sum of all "daily discharges" measured during a calendar week divided by the number of "daily discharges" measured during that week (zero discharge days shall not be included in the number of "daily discharges" measured and a less than detectable test result shall be treated as a concentration of zero if the most sensitive EPA approved method was used).
4. *AWPCA* - means the Alabama Water Pollution Control Act.
5. *Bypass* - means the intentional diversion of waste streams from any portion of a treatment facility.
6. *Daily discharge* - means the discharge of a pollutant measured during any consecutive 24 hour period in accordance with the sample type and analytical methodology specified by the discharge permit.
7. *Daily maximum* - means the highest value of any individual sample result obtained during a day.
8. *Daily minimum* - means the lowest value of any individual sample result obtained during a day.
9. *Day* - means any consecutive 24-hour period.
10. *Department* - means the Alabama Department of Environmental Management.
11. *Director* - means the Director of the Department.
12. *Discharge* - means "[t]he addition, introduction, leaking, spilling or emitting of any sewage, industrial waste, pollutant or other wastes into waters of the state". Code of Alabama 1975, Section 22-22-1(b)(8).
13. *Discharge monitoring report (DMR)* - means the form approved by the Director to accomplish reporting requirements of an NPDES permit.
14. *EPA* - means the United States Environmental Protection Agency.
15. *Equipment* – means for the purpose of this permit equipment used in the transportation industry such as trucks, rail cars and engines, and aircraft. It could also include other motorized equipment in other industries (e.g., heavy equipment in the construction industry).
16. *FWPCA* - means the Federal Water Pollution Control Act.

16. *New facility* in relation to 316(b) - means any building, structure, facility, or installation that meets the definition of a "new source" or "new discharger" in [40 CFR 122.2](#) and [122.29\(b\)\(1\), \(2\), and \(4\)](#) and is a greenfield or stand-alone facility; commences construction after January 17, 2002; and uses either a newly constructed cooling water intake structure, or an existing cooling water intake structure whose design capacity is increased to accommodate the intake of additional cooling water. New facilities include only "greenfield" and "stand-alone" facilities. A greenfield facility is a facility that is constructed at a site at which no other source is located, or that totally replaces the process or production equipment at an existing facility (see [40 CFR 122.29\(b\)\(1\)\(i\)](#) and [\(ii\)](#)). A stand-alone facility is a new, separate facility that is constructed on property where an existing facility is located and whose processes are substantially independent of the existing facility at the same site (see [40 CFR 122.29\(b\)\(1\)\(iii\)](#)). New facility does not include new units that are added to a facility for purposes of the same general industrial operation (for example, a new peaking unit at an electrical generating station).
18. *Notice of Intent (NOI)* – means forms and additional information that are required by ADEM Administrative Code Rule 335-6-6-.23 and applicable permit fees.
19. *Oil* – means oil of any kind or in any form, including, but not limited to: fats, oils, or greases of animal, fish, or marine mammal origin; vegetable oils, including oils from seeds, nuts, fruits, or kernels; and, other oils and greases, including petroleum, fuel oil, sludge, synthetic oils, mineral oils, oil refuse, or oil mixed with wastes other than dredged spoil.
20. *Permit application* - means forms and additional information that is required by ADEM Administrative Code Rule 335-6-6-.08 and applicable permit fees.
21. *Petroleum oil* – means petroleum in any form, including but not limited to crude oil, fuel oil, mineral oil, sludge, oil refuse, and refined products.
22. *Point source* - means "any discernible, confined and discrete conveyance, including but not limited to any pipe, channel, ditch, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." Section 502(14) of the FWPCA, 33 U.S.C. Section 1362(14).
23. *Pollutant* - includes for purposes of this permit, but is not limited to, those pollutants specified in Code of Alabama 1975, Section 22-22-1(b)(3) and those effluent characteristics specified in Provision I. A. of this permit.
24. *Severe property damage* - means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.
25. *Shock chlorination* – means the periodic use of chlorine in cooling water systems as a biocide.
26. *Solvent*-means organic material (e.g. benzene, acetone, or gasoline) used to clean (dissolve) oils or grease from machinery, fabrics, or other surfaces, or to extract hydrocarbons from some source material.
27. *Upset* - means an exceptional incident in which there is an unintentional and temporary noncompliance with technology-based permit discharge limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.
28. *Waters* - means "[a]ll waters of any river, stream, watercourse, pond, lake, coastal, ground or surface water, wholly or partially within the state, natural or artificial. This does not include waters which are entirely confined and retained completely upon the property of a single individual, partnership or corporation unless such waters are used in interstate commerce." Code of Alabama 1975, Section 22-22-1(b)(2). Waters "include all navigable waters" as defined in Section 502(7) of the FWPCA, 22 U.S.C. Section 1362(7), which are within the State of Alabama.
29. *Week* - means the period beginning at twelve midnight Saturday and ending at twelve midnight the following Saturday.

#### H. SEVERABILITY

The provisions of this permit are severable, and if any provision of this permit or the application of any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

## **PART IV: ADDITIONAL REQUIREMENTS, CONDITIONS, AND LIMITATIONS**

### **A. STORM WATER MEASUREMENT AND SAMPLING**

#### **1. Storm Water Measurement**

- a. All storm water samples shall be collected from the discharge resulting from a storm event that is greater than 0.1 inches.
- b. The storm water event must be monitored, including the date and rainfall (in inches) for the storm event(s) sampled. The duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event must be a minimum of 72 hours. This information must be recorded as part of the sampling procedure and records retained according to Part I.B.4.b. of this permit.
- c. During the sampling storm event, rainfall must be reported and may be measured using a rain gauge. This information must be recorded as part of the sampling procedure and records retained according to Part I.B.4.b. of this permit.

#### **2. Storm Water Sampling**

- a. A grab sample, if required by this permit, shall be taken during the first thirty minutes of the discharge (or as soon thereafter as practicable); and a flow weighted composite sample, if required by this permit, shall be taken for the entire event or for the first three hours of the event.
- b. All test procedures will be in accordance with Part I.B.2. of this permit.

### **B. BEST MANAGEMENT PRACTICES (BMP) PLAN**

The permittee shall develop and implement a Best Management Practices (BMP) plan for the facility. The plan shall be directed toward reducing pollutants to surface waters and shall be prepared in accordance with good engineering and good housekeeping practices. The plan shall address all activities which could or do contribute pollutants to the surface water discharge, including process, treatment, and ancillary activities.

#### **1. Signatory Authority & Management Responsibilities**

- a. The plan shall be signed by the plant manager and shall be reviewed by the plant environmental staff. A copy of the plan shall be retained at the facility and shall be made available to the Department upon request.
- b. The plan shall contain a written statement from the plant management indicating management's commitment to the goals of the program. Management shall also provide training for the individuals responsible for implementing the BMP Plan.

#### **2. General BMP Plan Requirements**

- a. Name & description of facility, a map illustrating the location of the facility and adjacent receiving waters, and other maps, plot plans or drawings, as necessary;
- b. Overall objectives and scope of the plan;
- c. A description of procedures relative to spill prevention, control & countermeasures and a description of measures employed to prevent storm water contamination;
- d. A description of practices involving preventive maintenance, housekeeping, record keeping, inspections, and plant security;
- e. Provide for routine inspections of designated equipment and areas of the facility, at a minimum, twice weekly, on workdays, of any structures that function to prevent storm water pollution or to remove pollutants from storm water and of the facility in general to ensure that the BMP Plan is continually implemented and effective. The following areas shall be included in all inspections: pressure washing area, blasting and painting areas, material storage areas, engine maintenance and repair areas, material handling areas, dry-dock area, and general yard area.
- f. A log of the routine inspections required by this Part shall be maintained at the facility and shall be made available for inspection by representatives of the Department. The log shall contain records of all inspections performed for the last three years and the person performing the inspection shall sign each entry. A set of

tracking or follow-up procedures shall be used to ensure that appropriate actions are taken in response to the inspections.

- g. The permittee shall provide training for any personnel required to implement the BMP Plan and shall retain documentation of such training at the facility. This documentation shall be available for inspection by representatives of the Department. Training shall be performed prior to the date that implementation of the BMP is required and annually thereafter, at a minimum. Employee training must, at a minimum, address the following areas when applicable to a facility: Used oil management; spent solvent management; proper disposal of spent abrasives; proper disposal of vessel wastewaters, spill prevention and control; fueling procedures; and used battery management. Employees and independent contractors must be informed about the BMPs and be required to perform in accordance with these practices.

### **3. Plan Development and Implementation**

The BMP plan shall be developed or revised, and implemented upon the effective date of coverage under the permit.

### **4. Plan Review and Modification**

- a. If following review by the Department, the BMP plan is determined insufficient, the Department may notify the permittee that the BMP plan does not meet one or more of the minimum requirements of this Part. Upon such notification from the Department, the permittee shall amend the plan and shall submit to the Department written certification that the requested changes have been made. Unless otherwise provided by the Department, the permittee shall have 30 days after such notification to make the changes necessary.
- b. The permittee shall modify the BMP plan whenever there is a change in design, construction, operation, or maintenance, which has a significant effect on the potential for the discharge of pollutants to a water of the state or if the plan proves to be ineffective in achieving the general objectives of reducing pollutants in storm water discharges. The Department may review modifications to the plan in the same manner as described above.

### **5. Specific BMPs for Implementation**

- a. Only biodegradable and phosphate free detergents and/or surfactants are to be used in cleaning activities from which a discharge occurs.
- b. Direct deck drainage to a collection system sump for settling and/or additional treatment, if contaminants are present. Discharges of treated deck drainage must be included as one of the designated outfalls for which coverage has been granted under the permit prior to discharge. Otherwise, treated or contaminated deck drainage must be collected and properly disposed off-site.
- c. Pressure washing is allowed as necessary to remove marine growth from vessels. However, unless the pressure wash water is collected and treated prior to discharge, pressure shall be maintained at or below a level which will not result in the removal of the existing paint coating and shall be performed only in areas of the hull and will not be significantly disturbed by pressure washing. Pressure wash water contaminated with paint chips shall be collected and properly disposed off-site or treated prior to discharge. Discharges of treated pressure wash water must be included as one of the designated outfalls for which coverage has been granted under the permit prior to discharge.

### **6. Surface Preparation, Sanding, and Paint Removal**

- a. Enclose, cover, or contain blasting and sanding activities to the extent practical to prevent or minimize abrasives and paint chips from repair work, and dust from both repair and new construction activities from reaching storm sewers or the receiving water.
- b. Where feasible, cover drains, trenches, and drainage channels to prevent or minimize entry of blasting debris from repair work to the system.
- c. Prohibit uncontained blasting or sanding activities performed over open water for both new construction and repair activities.
- d. Prohibit blasting or sanding activities from both repair work and new construction from being performed during windy conditions, which render containment ineffective.

- e. Sweep accessible areas of the dry-dock to remove debris and spent blasting material from both repair and new construction activities prior to flooding and/or install filtering system prior to flooding. The filtering system utilized must be sufficient to remove solids such that the discharge turbidity is in compliance with the state instream water quality standard.
- f. Collect spent abrasives from repair work where paint is removed and store under a cover to await proper disposal off site.
- g. Unless specifically authorized for discharge under this permit, collect and properly dispose of wastewaters from hydroblasting. Discharges of wastewaters from hydroblasting must be included as one of the designated outfalls for which coverage has been granted under the permit prior to discharge.
- h. Collect and properly dispose of wastewater from wet abrasive blasting.

## **7. Painting**

- a. Enclose, cover, or contain spray-painting activities to the maximum extent practical to prevent or minimize over spray from reaching the receiving water.
- b. Prohibit uncontained spray painting activities over open water.
- c. Prohibit spray-painting activities during windy conditions, which render containment ineffective.
- d. Mix paints and solvents in designated areas to prevent spills or releases from entering drains, ditches, and surface waters, preferably indoors or under cover.
- e. Have absorbent and other cleanup items readily available for immediate cleanup of spills.
- f. Allow empty paint cans to dry before disposal.
- g. Keep paint and paint thinner only in areas designated by the BMP plan.
- h. Recycle paint, paint thinner, and solvents or properly dispose.
- i. Train employees on proper painting and spraying techniques, and use effective spray equipment that delivers more paint to the target and less over spray.

## **8. Dry-dock Maintenance**

- a. Clean and maintain dry-dock on a regular basis to minimize the potential for pollutants in the storm water runoff.
- b. Sweep accessible areas of the dry-dock to remove debris and spent sandblasting material from both repair and new construction activities prior to flooding and/or install filtering system prior to flooding. The filtering system utilized must be sufficient to remove solids such that the discharge turbidity is in compliance with the state instream water quality standard.
- c. If hosing must be used as a removal method, collect and dispose of wastewaters off-site or filter wash water to remove solids and potential metals prior to discharge. The filtering system utilized must be sufficient to remove solids such that the discharge turbidity is in compliance with the state instream water quality standard. Also, non-chlorinated water should be used as the source water.
- d. Clean the remaining areas of the dock after a vessel has been removed and the dock raised unless a filtering system has been installed. The filtering system utilized must be sufficient to remove solids such that the discharge turbidity is in compliance with the state instream water quality standard.
- e. Remove and properly dispose of floatable and other low-density waste (wood, plastic, insulation, etc.), prior to flooding.

## **9. Floating Dry-dock Containment**

- a. Use containment barriers hung from the wing walls of the dry-dock, from the bow or stern of the vessel, or from temporary structures for containment.
- b. Weight or otherwise secure the bottom edge of the containment tarpaulins or plastic sheeting during a light breeze.

- c. Use plywood and/or plastic sheeting to cover open areas between decks when sandblasting (scuppers, railings, freeing ports, ladders, and doorways).

#### **10. Non-dry-dock Containment**

- a. Hang tarpaulins, if necessary, from the boat, fixed, or floating platforms to reduce pollutants transported by wind to adjacent waterways.
- b. For repair activities install a boundary surface (i.e. paving or tarping) under marine railways to facilitate collection of spent abrasives and paint chips.
- c. Clean railways of floatable and other low-density waste (wood, plastic, insulation, etc.) and spent abrasives and paint chips from repair work before the incoming tide, if the area could be potentially effected.
- d. Haul vessels beyond the high tide zone before work commences or halt work during high tide.
- e. Place plastic sheeting or tarpaulin underneath boats, if a boundary surface layer is not present, to contain and collect waste and spent materials from repair work and clean and sweep regularly to remove debris.
- f. Use fixed or floating platforms with appropriate plastic or tarpaulin barriers as work surfaces and for containment when work is performed on a vessel in the water to prevent or minimize blast material or paint over spray from contacting storm water or the receiving water.
- g. Sweep, rather than hose, debris present on the dock.

#### **11. Engine Maintenance and repairs**

- a. Maintain an organized inventory of materials used in the maintenance shop.
- b. Dispose of greasy rags, oil filters, air filters, batteries, spent coolant, and degreasers properly.
- c. Label, if necessary for identification, and track the recycling of waste material (i.e., used oil, spent solvents, batteries).
- d. Drain oil filters before disposal or recycling.
- e. Store cracked batteries in a non-leaking secondary container.
- f. Promptly transfer used fluids to the proper container; do not leave full drip pans or other open containers around the shop. Empty and clean drip pans and containers.
- g. Do not pour waste oil, spent coolants, or solvents down floor drains, sinks, or outdoor storm drain inlets.
- h. Plug floor drains that are connected to the storm or sanitary sewer unless otherwise authorized by the sanitary sewer authority or by a permit from the Department; if it is necessary, install a sump that is pumped regularly.
- i. Inspect the maintenance area regularly for proper implementation of control measures.
- j. Train employees on proper waste control and disposal procedures.

#### **12. Material Handling: Bulk liquid storage and containment**

- a. Store permanent tanks in an impervious area surrounded by a dike system, which provides sufficient containment for the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- b. Maintain good integrity of all liquids storage tanks.
- c. Inspect liquid storage tanks to detect potential leaks and perform preventive maintenance.
- d. Inspect piping systems (pipes, pumps, flanges, couplings, hoses, valves) for failure or leaks.
- e. Train employees on proper filling and transfer procedures.

### **13. Material Handling: Containerized material storage**

- a. Store containerized materials (fuels, paints, solvents, etc.) in a protected, secured location and provide sufficient control to prevent releases to the sanitary sewer or adjacent waterways in the event of spills or releases.
- b. Store reactive, ignitable, or flammable liquids in compliance with the local fire code.
- c. Identify potentially hazardous materials, their characteristics, and use.
- d. Keep records to identify quantity, receipt date, service life, users, and disposal routes for all hazardous materials.
- e. Secure and carefully monitor hazardous materials to prevent theft, vandalism, and misuse of materials.
- f. Educate personnel for proper storage, use, cleanup, and disposal of materials.
- g. Comply with 40 CFR Part 112, Spill Prevention Control and Countermeasures, if applicable, for petroleum storage.
- h. Use temporary containment where required by portable drip pans.
- i. Use spill troughs for drums with taps.

### **14. Material Handling: Designated material mixing areas**

- a. Mix paints and solvents in designated areas to prevent spills or releases from entering drains, ditches, and surface waters. Locate designated areas preferably indoors or under a shed.
- b. If spills occur,
  - (1) Stop the source of the spill immediately.
  - (2) Contain the liquid until cleanup is complete.
  - (3) Deploy oil containment booms if the spill may reach the water.
  - (4) Cover the spill with absorbent material.
  - (5) Keep the area well ventilated.
  - (6) Dispose of cleanup materials properly.
  - (7) Do not use emulsifier or dispersant.

### **15. Shipboard Wastewater Handling**

- a. Discharges of wastewater and cooling water from a vessel while not being used as a means of transportation is prohibited unless these wastewaters are included as a specifically designated outfall for which coverage has been granted under the permit.
- b. Keep all wastewaters and cooling waters from contact with spent abrasives and paint to avoid discharging these pollutants.
- c. Inspect connecting hoses for leaks.

### **16. Shipboard Sanitary Waste Disposal**

- a. Discharge sanitary wastes from the ship being repaired to the yard's sanitary system or dispose of properly by a commercial waste disposal company unless authorized for discharge under the permit. Discharges of sanitary wastewater must be included as a specific outfall for which coverage has been granted under the permit unless the discharge results from the normal operation of the vessel while being used as a means of transportation.
- b. Use appropriate material transfer procedures, including spill prevention and containment activities.

## **17. Bilge and Ballast Water**

Collect and dispose of bilge and ballast waters which have come into contact with product, waste, or waste residuals or which contain oils, solvents, detergents, or other additives and dispose of properly to certified waste disposal company.

## **C. DISCHARGE(S) TO IMPAIRED WATERS REQUIREMENTS**

### **1. Requirements Applicable to a Facility Eligible for Coverage, or Covered, under this Permit with Discharge(s) to 303(d) Listed Waters**

This permit does not authorize new sources or new dischargers of pollutants of concern to impaired waters unless consistent with an EPA-approved or EPA-established Total Maximum Daily Load (TMDL) and applicable State law. Impaired waters are those that do not meet applicable water quality standards and are identified by an EPA-approved or EPA-established TMDL and/or on the State of Alabama's 303(d) list. Pollutants of concern are those pollutants for which the water body is listed as impaired and which contribute to the listed impairment.

- a. The facility eligible for coverage, or covered, under this permit must determine whether its discharge(s) contributes directly or indirectly to a waterbody that is included on the latest 303(d) list or otherwise designated by the Department as impaired or is included in an EPA-approved or EPA-established TMDL. If the facility has discharges meeting this criterion, it must comply with Part IV.C., if its discharge does not meet this criterion, Part IV.C. does not apply to the facility.
- b. Facilities that discharge into a receiving water which is listed on the State of Alabama's 303(d) list of impaired waters, and with discharges that contain the pollutant(s) for which the waterbody is impaired, must by April 30<sup>th</sup> of the following year or within 6 months of such approval of the 303(d) list or applicable TMDL or establishment of TMDL by EPA (whichever is longer), document in its BMP plan how the BMPs will control the discharge of the pollutant(s) of concern, and must ensure that there will be no increase of the pollutants of concern. A monitoring plan to assess the effectiveness of the BMPs in achieving the allocations must also be included in the BMP plan.
- c. If the facility discharges to a waterbody described above, it must also determine whether a total maximum daily load (TMDL) has been developed and approved or established by EPA for the listed waterbody. If a TMDL is approved or established during this permit cycle by USEPA for any waterbody into which the facility discharges, the facility must review the applicable TMDL to see if it includes requirements for control of storm water discharges. By April 30<sup>th</sup> of the following year or within 6 months of such approval of the 303(d) list or applicable TMDL or establishment of TMDL by EPA (whichever is longer), the facility must notify the Department how it will modify its BMP plan to include best management practices specifically targeted to achieve the allocations prescribed by the TMDL. Revised BMP plans must be submitted to the Department for review. The facility must include a monitoring component in the BMP plan to assess the effectiveness of the BMPs in achieving the allocations. If the facility cannot ensure its discharges will not cause or contribute to impairment, then the facility must apply for and obtain permit coverage under an individual permit.

### **2. Requirements Applicable to a Facility Eligible for Coverage, or Covered, under this Permit with Discharges into Waters with EPA-Approved or EPA-Established TMDLs**

- a. The facility must determine whether the EPA-approved or EPA-established TMDL is for a pollutant likely to be found in discharges from its facility.
- b. The facility must determine whether the TMDL includes a pollutant allocation or other performance requirements specifically for discharges from its facility.
- c. If, after the determinations above have been made and if it is determined that the facility must implement specific allocations provisions of the TMDL, then the facility must assess whether the allocations are being met through implementation of existing control measures or if additional control measures are necessary.
- d. The facility must document all control measures currently being implemented or planned to be implemented, to include a schedule of implementation for all planned controls, and must document calculations or other evidence showing that the allocations will be met. Revised BMP plans must be submitted to the Department for review.
- e. If a TMDL contains requirements for control of pollutants from the facility's discharges, then the BMP plan must include BMPs specifically targeted to achieve the allocations prescribed by the TMDL. A monitoring plan to assess the effectiveness of the BMPs in achieving the allocations must also be included in the BMP plan.

Implementation of the monitoring plan in accordance with Part IV.C.2 will determine whether the controls are adequate to meet the TMDL allocations. If the facility cannot comply with the requirements of the TMDL, then the facility must apply for and obtain permit coverage under an individual permit.

- f. If the evaluation shows that additional or modified controls are necessary, the facility must describe the type and schedule for the control additions/revisions in the BMP plan. The facility must also continue Paragraphs IV.C.2.d.-f. until two continuous monitoring cycles, as defined in the monitoring plan in accordance with Part IV.C.2., show that the TMDL allocations are being met or that water quality (WQ) standards are being met.

### **3. Requirements for New or Revised BMP Plans**

New or revised BMP plans developed in accordance with Parts IV.C.1 and IV.C.2 above must be submitted to the Department for review by April 30<sup>th</sup> of the year following EPA approval of the 303(d) list or EPA establishment/approval of applicable TMDL or within 6 months of such approval of the 303(d) list or applicable TMDL or establishment of TMDL by EPA (whichever is longer).

## **D. COOLING WATER INTAKE STRUCTURES (CWIS) REQUIREMENTS**

For new facilities that are not subject to the Phase I rule, existing facilities that are not subject to the Phase II rule, or oil and gas facilities that are not subject to the Phase III rule, an initial determination of Best Technology Available (BTA) will be made for the facility CWIS during the permit coverage renewal process. The coverage under this General Permit will only be allowed if the Department makes a Best Professional Judgement (BPJ) determination that the cooling water structure represents BTA to minimize adverse environmental impacts in accordance with Section 316(b) of the Federal Clean Water Act (33 U.S.C. Section 1326) or the provider of the water to the permittee is a public water supply and therefore is exempt from 316(b).

### **1. Cooling Water Intake Requirements – Facility Obtaining Cooling Water from Facility Intake Structure**

- a. The cooling water intake structure used by the permittee will be evaluated using available information. In order to obtain coverage under this Permit, the Department must determine that the cooling water intake structure represents the best technology available (BTA) to minimize adverse environmental impact in accordance with Section 316(b) of the Federal Clean Water Act (33 U.S.C. Section 1326).
- b. The permittee shall submit, if available or applicable, the following information with the permit NOI within 90 days prior to permit expiration. The information will be evaluated to determine compliance with Section 316(b) of the Federal Clean Water Act (33 U.S.C. Section 1326) prior to issuance of this permit.
  - (1) Design in-take flow of the CWIS;
  - (2) Percentage of in-take flow, based on the highest monthly average in last 5 years, used for cooling purposes;
  - (3) An estimate of the intake-flow reduction at the facility based upon the use of a 100 percent (or some lesser percentage) closed-cycle re-circulating cooling water system compared to a conventional once-through cooling water system;
  - (4) Through screen design in-take velocity;
  - (5) Any impingement and entrainment data that may have been collected based on the operation of the facility's CWIS, collected since Permit coverage; and,
  - (6) A detailed description of any changes in the operation of the CWIS, or changes in type of technologies used at the CWIS such as screens or other technologies affecting the rates of impingement and/or entrainment of fish and shellfish.
- c. The permittee is required to operate and maintain the CWIS in a manner that minimizes impingement and entrainment levels. Documentation detailing the steps that have and are being taken to minimize the impingement and entrainment levels shall be maintained on-site and made available upon request during inspections. The Permittee must keep records of all submissions that are part of the permit NOI pertaining to the CWIS until the subsequent coverage. Nothing in this Permit authorizes "take" for the purpose of a facility compliance with the Endangered Species Act. Under the Endangered Species Act, "take" means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct, of endangered, or threatened species.

**2. Cooling Water Intake Requirements – Facilities Obtaining Cooling Water from Another Entity**

- a. If an entity provides water to the permittee which is used for cooling by means of a surface water intake, the intake structure operated by the entity must be determined to represent the best technology available (BTA) to minimize adverse environmental impact in accordance with Section 316(b) of the federal Clean Water Act (33 U.S.C. section 1326).
- b. If the entity providing water to the permittee is a public water system in accordance with Section 1401 of the Safe Water Drinking Act or the water used for cooling consists of treated effluent which would otherwise be discharged, the permittee is exempt from the requirements of this permit condition.

**FACT SHEET**  
**APPLICATION FOR**  
**NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM**  
**PERMIT TO DISCHARGE STORM WATER AND WASTEWATER**  
**TO WATERS OF THE STATE OF ALABAMA**

**Date: June 13, 2022**

**Prepared By: Lee Warren**

**NPDES Permit No. ALG030000**

**1. Description of Category:**

This permit is intended to cover discharges associated with boat and ship building and repair industries (including oil and gas well drilling and production platforms building and repair). Facilities that typically obtain coverage under this General Permit are facilities with Standard Industrial Classification (SIC) Codes 3731 (ship building and repairing) and 3732 (boat building and repairing). However, the Department may issue coverages for similar facilities with SIC codes other than listed above. Marinas which are classified in the Transportation Industry group as SIC Code 4493 and which perform incidental boat repair (blasting and painting) are not listed under the ship building and repair major code group but have been included for coverage under this permit for these activities.

**2. Geographic area covered:**

State of Alabama

**3. Receiving waters:**

All waters of the State not designated Outstanding National Resource Water, Outstanding Alabama Water, or shellfish harvesting area.

**4. Types of discharge:**

This permit is intended to cover discharges associated with boat and ship building and repair industries (including oil and gas well drilling and production platforms building and repair) consisting of storm water, non-contact cooling water, uncontaminated condensate, cooling tower blowdown, boiler blowdown, demineralizer wastewater, treated sanitary wastewater, bilge/ballast water, wash water, hydrostatic and pressure test water, hydroblast water (not including wet abrasive blast water), and storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas.

**5. Permit Conditions:**

The permit conditions are based on 40 CFR Parts 122.26 and ADEM Admin Code div. 335-6

## 6. Procedures for the formulation of final determinations

### a. Comment Period

The Alabama Department of Environmental Management proposes to reissue this General NPDES Permit subject to the conditions outlined above. These determinations are tentative.

Interested persons are invited to submit written comments on the proposed general permit to the following address:

**Jeffery W. Kitchens, Chief**  
**ADEM-Water Division**  
**1400 Coliseum Blvd.**  
**[Mailing address: PO Box 301463; Zip 36130-1463]**  
**Montgomery, Alabama 36110-2400**  
**(334) 271-7823**  
[water-permits@adem.alabama.gov](mailto:water-permits@adem.alabama.gov)

All comments received prior to the closure of the public notice period (see attached public notice) will be considered in the formulation of final determinations with regard to this general permit.

### b. Public Hearing

A written request for a public hearing may be filed within the public notice period and must state the nature of the issues proposed to be raised in the hearing. A request for a hearing should be filed with the Department at the following address:

**Jeffery W. Kitchens, Chief**  
**ADEM-Water Division**  
**1400 Coliseum Blvd.**  
**[Mailing address: PO Box 301463; Zip 36130-1463]**  
**Montgomery, Alabama 36110-2400**  
**(334) 271-7823**  
[water-permits@adem.alabama.gov](mailto:water-permits@adem.alabama.gov)

The Director shall hold a public hearing whenever it is found, on the basis of the hearing request, that there exist a significant degree of public interest in a permit application or draft permit. The Director may hold a public hearing whenever such a hearing might clarify one or more issues involved in the permit decision. Public notice of such a hearing will be made in accordance with ADEM Admin. Code r. 335-6-6-.21.

### c. Issuance of the Permit

All comments received during the public comment period shall be considered in making the final permit decision. At the time that any final permit decision is issued, the Department shall prepare a response to comments in accordance with ADEM Admin. Code r. 335-6-6-.21. **The permit record, including the response to comments, will be available to the public via the eFile System (<http://app.adem.alabama.gov/eFile>) or an appointment to review the record may be made by writing the Permits and Services Division at the above address.**

Unless a request for a stay of the permit or permit provision is granted by the Environmental Management Commission, the proposed permit contained in the Director's determination shall be

issued and effective; and such issuance will be the final action of the Alabama Department of Environmental Management.

**d. Appeal Procedures**

As allowed under ADEM Admin. Code chap. 335-2-1, any person aggrieved by the Department's final administrative action may file a request for hearing to contest such action. Such requests should be received by the Environmental Management Commission within thirty days of issuance of the permit. Requests should be filed with the Commission at the following address:

Alabama Environmental Management Commission  
1400 Coliseum Blvd  
(Mailing Address: Post Office Box 301463; Zip 36130-1463)  
Montgomery, Alabama 36110-2400

All requests must be in writing and shall contain the information provided in ADEM Admin. Code r. 335-2-1-.04.

**ADEM GENERAL PERMIT RATIONALE  
BOAT AND SHIP BUILDING AND REPAIR  
ALG030000**

**Date:** June 13, 2022

**Prepared by:** Lee Warren

**LOCATION:** ALL WATERS OF THE STATE NOT DESIGNATED OUTSTANDING NATIONAL RESOURCE WATER, OUTSTANDING ALABAMA WATER, OR SHELLFISH HARVESTING AREA

PERMIT IS REISSUANCE DUE TO EXPIRATION

**DISCUSSION:**

The Department is proposing to reissue NPDES General Permit ALG030000. The permit is intended to cover discharges associated with the boat and ship building and repair industry (including offshore oil and gas well drilling and production platforms building and repair). Discharges include storm water, non-contact cooling water, uncontaminated condensate, cooling tower blowdown, boiler blowdown, demineralizer wastewater, treated sanitary wastewater, bilge/ballast water, wash water, hydrostatic and pressure test water, hydroblast water (not including wet abrasive blast water), and storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas.

Final Ocean Discharge Criteria Guidelines, which were promulgated on October 3, 1980, require the Regional Administrator to determine, on the basis of available information whether or not the discharge will cause unreasonable degradation of the marine environment. In consideration of the data collected and evaluated for similar discharges under the previous permits, it is believed that given the permit limitations and monitoring requirements proposed by the general permit, there will be no unreasonable degradation outside of the regulatory mixing zone as a result of routine discharges.

This permit shall be modified or revoked at any time if, on the basis of any new data, the Director determines that the continued discharge may cause unreasonable degradation of the marine environment.

**NOTE: The parameters for each of the following discharges, i.e. DSN#..., are proposed to be continued in this permit, as in the previous permit, unless otherwise noted.**

**DSN001:** Discharges of storm water associated with commercial boat and commercial ship building and repair activities including offshore oil and gas well drilling and production platforms.

**Rainfall**

The amount of rainfall occurring during the monitored rain event is to be reported in inches. Monitoring frequency is 1/6 months.

**pH**

Numeric pH limits are not imposed for storm water discharges as the permittee would not be expected to significantly impact the pH of the storm water, therefore, only monitoring is required. Monitoring frequency is 1/6 months.

#### Oil and Grease

The oil and grease daily maximum limit is 15 mg/l. This limit has been demonstrated through experience by the Department to be best conventional technology (BCT) to be achievable by gravity oil/water separators; however, to further ensure adequate oil removal occurs, a requirement for no oil sheen is also imposed. Monitoring frequency is 1/6 months.

#### Chemical Oxygen Demand (COD)

COD serves as a measure of the presence of reducing chemical compounds in the storm water runoff from spills or exposure of fuel, paint, or solvents. The COD parameter will also measure the presence of reducing biological wastes. No limitations are proposed. Monitoring will be used to evaluate the BMP plan effectiveness. Monitoring frequency is 1/6 months.

#### Total Recoverable Zinc, Total Recoverable Copper, and Total Recoverable Lead

Zinc, copper, and lead are constituents of paints and persist in abrasive blasting debris as components of the spent paint and abrasive. Antifouling paints are of particular concern. Toxic constituents, such as organotin compounds are used in these paint formulations. Zinc usually in the form of dust is also used as an anticorrosive additive in epoxy-based or vinyl base paint. Zinc, copper and lead are to be reported as "total recoverable" in order to measure that portion of the metal that is bioavailable. Also, this method of reporting is consistent with the ADEM Administrative Water Quality Rules. No limitations for these parameters are proposed since the discharge will occur only during storm events. Monitoring for all parameters will be used to evaluate the effectiveness of the BMP plan. Monitoring frequency is 1/6 months.

#### Total Tin

Tin will be reported as "total" in order to measure both the inorganic and organic tin which may be present. In the absence of a state water quality standard for tin, no limitation is proposed. Monitoring for this parameter will be used to evaluate the effectiveness of the BMP plan. Monitoring frequency is 1/6 months.

#### Total Suspended Solids

The permit includes the monitoring of total suspended solids to evaluate BMP effectiveness. Monitoring frequency is 1/6 months.

#### Total Recoverable Iron & Total Recoverable Aluminum

To minimize the amount of dust generated during dry abrasive blasting some of the yards in Alabama use "Black Beauty" abrasive. This abrasive is often the slag collected from coal-fired boilers. The principal constituents are iron, aluminum, and silicon oxides. Storm water runoff data collected under the individual NPDES permit monitoring program has indicated significant levels of iron and aluminum to warrant continued monitoring. Both constituents are to be reported as "total recoverable" in order to represent that portion of the metal which is bioavailable. This method of reporting is also consistent with the ADEM Administrative Water Quality Rules. In the absence of state water quality standards for these parameters no limitations are proposed. Monitoring will be used to evaluate the BMP plan effectiveness. Monitoring frequency is 1/6 months.

**DSN002:** Discharges of storm water associated with recreational and pleasure boat building and repair activities including incidental boat repair associated with marina operations.

The pollutants of concern in the storm water runoff are the same as those listed under DSN001 for the larger commercial vessels. Based on the rationale presented above, the same limitations and monitoring requirements apply with exception to monitoring frequency. Due to the size of these

operations, it is believed, based on BPJ, that a monitoring frequency of once per year is adequate for BMP evaluation.

Rainfall

See DSN001. Monitoring frequency is 1/year.

pH

See DSN001. Monitoring frequency is 1/year.

Oil and Grease

See DSN001. Monitoring frequency is 1/year.

Chemical Oxygen Demand (COD)

See DSN001. Monitoring frequency is 1/year.

Total Recoverable Zinc, Total Recoverable Copper, and Total Recoverable Lead

See DSN001. Monitoring frequency is 1/year.

Tin, Total

See DSN001. Monitoring frequency is 1/year.

Total Suspended Solids

See DSN001. Monitoring frequency is 1/year.

Total Recoverable Iron & Total Recoverable Aluminum

See DSN001. Monitoring frequency is 1/year.

**DSN003:** Discharges of storm water from those establishments where ship and boat building and repair activities are not exposed to storm water (i.e., conducted in a totally enclosed area).

Because all industrial activity is conducted under roof and is not exposed to storm water, no monitoring requirements are imposed. Best Management Practices (BMP) are to be implemented. Annual certification shall be submitted in January stating that the operations have not changed and that all discharges have been made in accordance with conditions of the permit.

**DSN004:** Discharges of treated sanitary wastewater. (This discharge can only be assigned when there is no other feasible discharge alternative and only to that segment of the Mobile River classified as Limited Warmwater Fishery (LWF).

In the past, this segment of the Mobile River was Classified as Agricultural and Industrial (A&I). Since the classification is now LWF, DSN004 is being updated to reflect this change.

Flow Flow is to be measured in gallons per day. Monitoring frequency is 1/2 weeks.

Biochemical Oxygen Demand, 5-day (BOD<sub>5</sub>) & Total Suspended Solids (TSS)

State water quality standards require that secondary treatment is provided for any biologically degradable waste. For sanitary waste this is considered equivalent to an average limitation of 30 mg/l for biochemical oxygen demand (BOD<sub>5</sub>) and total suspended solids (TSS). Therefore, these limitations have been applied with a daily maximum limit of 45 mg/l based on a factor of 1.5 which is considered Best Professional Judgment (BPJ) and is consistent with permitting procedures. Monitoring frequency is 1/2 weeks.

#### Total Residual Chlorine (TRC)

The daily maximum and the monthly average limits for chlorine are 0.019 mg/l and 0.011 mg/l. EPA's suggested water quality criteria for total residual chlorine of 0.011 mg/l for chronic toxicity and 0.019 mg/l for acute toxicity are being used as the monthly average and maximum values respectively for discharges into zero flow freshwater streams. Monitoring frequency is 1/2 weeks.

The daily maximum and the monthly average limits for chlorine are 0.013 mg/l and 0.0075 mg/l. EPA's suggested water quality criteria for total residual chlorine of 0.0075 mg/l for chronic toxicity and 0.013 mg/l for acute toxicity are being used as the monthly average and maximum values respectively for discharges into salt waterbodies. Monitoring frequency is 1/2 weeks.

In accordance with a letter dated August 11, 1998 from EPA Headquarters and a 1991 memorandum from EPA Region 4's Environmental Services Division (ESD), due to testing and method detection limitations, a Total Residual Chlorine measurement below 0.05 mg/L shall be considered below detection for compliance purposes.

pH      pH limitations are 6.0 daily minimum and 8.5 daily maximum for waste water discharges as set forth in ADEM Administrative Code R. 335-6-10. Monitoring frequency is 1/ 2 weeks.

#### Enterococci

In coastal waters, bacteria of the enterococci group shall not exceed a geometric mean of 35 colonies/100 ml nor exceed a maximum of 104 colonies/100 ml in any sample.

#### E. coli

The E. coli parameter is being removed from DSN004 since discharge under DSN004 only applies to that segment of the Mobile River classified as Limited Warmwater Fishery (LWF) which is considered coastal water and is subject to monitoring for enterococci.

**DSN005:** Discharges of bilge and ballast water, wash water including pressure wash water resulting from the removal of marine growth, or waters from hydrostatic and pressure testing all which have not come into contact with product, waste, or waste residuals.

No monitoring requirements imposed. Best Management Practices (BMP) are to be implemented.

**DSN006:** Discharges of treated pressure wash waters which are contaminated with paint chips or other additives and/or hydroblast water (not including wet abrasive blasting water) resulting from the cleaning of vessels.

Flow      See DSN004. Monitoring frequency is daily.

pH      See DSN004. Monitoring frequency is 1/ week.

#### Oil and Grease

Because of widespread use of fuel, solvents, and paint, oil and grease can occur in wastewater from these activities. Based on Best Professional Judgment (BPJ), a daily maximum oil and grease limit of 15 mg/l and a monthly average limit of 10 mg/l is proposed. These limitations coupled with the requirement that the discharge shall have no sheen have been proven to be effective in protecting water quality. These limitations have also been demonstrated to be achievable using gravity oil/water separators. For this reason they are considered equivalent to BCT.

Chemical Oxygen Demand (COD)

See DSN001. Monitoring frequency is 1/week.

Total Recoverable Zinc, Total Recoverable Copper, Total Recoverable Lead

See DSN001. Monitoring frequency is 1/week.

Tin, Total

See DSN001. Monitoring frequency is 1/week.

Total Suspended Solids (TSS)

See DSN001. Monitoring frequency is 1/week.

**DSN007:** Discharges associated with non-contact cooling water, uncontaminated condensate, cooling tower blowdown, boiler blowdown, and demineralizer wastewater.

This outfall requires monitoring and/or numeric limitations for the following parameters.

Flow See DSN004. Monitoring frequency is 1/month.

pH See DSN004. Monitoring frequency is 1/month.

Temperature

The temperature will be limited to 90 degrees Fahrenheit, except in the Tennessee and Cahaba River Basins and in the Tallapoosa River from Thurlow Dam to the confluence of the Tallapoosa and Coosa Rivers where it will be limited to 86 degrees Fahrenheit in accordance with ADEM Administrative Code R. 335-6-10. Monitoring frequency is 1/month.

Total Residual Chlorine (TRC)

EPA's suggested water quality value for total residual chlorine of 0.013 mg/l for salt water acute toxicity is used as the daily maximum limitation for salt water. Monitoring for chlorine is required when "shock chlorination" is performed, if applicable. Facilities that do not add chlorine or use chlorinated source water are not required to monitor under the permit. The monthly average limit is not needed due to a monthly monitoring frequency. Monitoring frequency is 1/month.

The daily maximum limit for chlorine is 0.019 mg/l for fresh water streams. EPA's suggested water quality criteria for total residual chlorine of 0.019 mg/l for acute toxicity is being used as the maximum values respectively for discharges into zero flow freshwater streams. Monitoring frequency is 1/month.

In accordance with a letter dated August 11, 1998 from EPA Headquarters and a 1991 memorandum from EPA Region 4's Environmental Services Division (ESD), due to testing and method detection limitations, a Total Residual Chlorine measurement below 0.05 mg/L shall be considered below detection for compliance purposes.

Based on best professional judgment (BPJ), facilities will be required to monitor for the concentrations of chlorine listed above except under two conditions. The conditions are:

1. If no chlorine is present in or added to the source water.
2. If the distance from the end of the pipe to the receiving water of the state is greater than 2,500 feet and the applicant can demonstrate that the above limits are being met at the receiving water of the state.

If these conditions cannot be met, the permittee must monitor as required by the permit. However, if these conditions are met, the facility must code the total residual chlorine parameter on the electronic Discharge Monitoring Report (e-DMR) as \*9 or the hardcopy DMR as "NODI=9" (monitoring is conditional not required this period).

The permittee will be required to monitor during shock chlorination, if applicable.

#### Chlorides, Total

If the boiler blowdown exceeds 5,000 gallons per day or if demineralizer wastewater is discharged, then total chlorides must be monitored. If the discharge is to freshwater, Chlorides will have a numeric limit of 860 mg/l to protect water quality. This limitation is based upon EPA's National Recommended Water Quality Criteria. If necessary, the demineralizer wastewater may be diluted to meet water quality standards. Monitoring frequency is 1/month.

#### Total Dissolved Solids

If the boiler blowdown exceeds 5,000 gallons per day or if demineralizer wastewater is discharged, then total dissolved solids must be monitored. Monitoring frequency is 1/month.

#### Use of biocides

A biocide clause as noted below will be present in this permit to assure that information is available for Departmental review. The use of biocides containing tributyl tin, tributyl tin oxide, zinc, and/ or chromium are prohibited, based on available data which indicates that these compounds are very toxic at low levels, and thus have the potential for causing toxicity in the receiving stream.

The permit requires that the permittee shall notify the Director in writing not later than sixty (60) days prior to instituting the use of any biocide corrosion inhibitor or chemical additive, not identified in the notice of intent for coverage for this permit, from which discharge is allowed by this permit. Such notification shall include:

- (1) name and general composition of biocide or chemical,
- (2) 48-hour or 96-hour LC50 data for the fathead minnow (*Pimephales promelas*) and cladoceran (*Ceriodaphnia dubia*) for freshwater discharges. For salt water, mysid shrimp; and sheepshead minnow or inland silverside. Other acceptable aquatic organisms may be allowed by the Department if sufficient information is submitted.
- (3) quantities to be used,
- (4) frequencies of use,
- (5) maximum proposed discharge concentrations, and
- (6) EPA registration of number, if applicable.

The use of a biocide or additive containing tributyl tin, tributyl tin oxide, zinc, chromium or related compounds in discharges regulated by the permit occurs is prohibited. The use of any additive not identified in the permit or in the notice of intent for coverage for the permit prior to a determination by the Department that permit modification controlling discharge of the additive is prohibited.

The Part I.D.6 a and b of the draft permit has been updated to clarify that wastewater discharges not only associated with cooling and boiler systems are also subject to the additives requirements of the permit.

#### Cooling Water Intake Structures (CWIS)

Section 316(b) of the Clean Water Act requires that facilities minimize adverse environmental impact resulting from the operation of cooling water intake structures (CWIS) by using the “best technology available” (BTA). U.S. EPA has promulgated rules to implement these requirements for new facilities (Phase I rules), existing industrial facilities (Phase II rules) and new offshore oil and gas extraction facilities (Phase III rules), and implementation must take place through the issuance of NPDES permits. However, there is a universe of facilities which are not specifically addressed by the rules, including:

- New and existing facilities, including offshore oil and gas, with a CWIS design flow less than 2 MGD;

All of these facilities, including those not specifically addressed by rules, must be evaluated for 316(b) compliance. For those facilities not addressed in Phase I, II, or III rules, a BTA determination must be made using best professional judgment.

For new facilities that are not subject to the Phase I rule, existing facilities that are not subject to the Phase II rule, or oil and gas facilities that are not subject to the Phase III rule, a determination of BTA will be made for the facility’s CWIS during the permit coverage renewal process.

For facilities with CWIS the following information shall be submitted at least 90 days to expiration of this permit.

- Design in-take flow of the CWIS;
- Percentage of in-take flow, based on the highest monthly average in last 5 years, used for cooling purposes;
- An estimate of the intake-flow reduction at the facility based upon the use of a 100 percent (or some lesser percentage) closed-cycle re-circulating cooling water system compared to a conventional once-through cooling water system;
- Through screen design in-take velocity;
- Any impingement and entrainment data that may have been collected based on the operation of the facility’s CWIS, collected since the effective date of this NPDES permit; and,
- A detailed description of any changes in the operation of the CWIS, or changes in type of technologies used at the CWIS such as screens or other technologies affecting the rates of impingement and/or entrainment of fish and shellfish.

The Permittee is required to operate and maintain the CWIS in a manner that minimizes impingement and entrainment levels. Documentation detailing the steps that have and are being taken to minimize the impingement and entrainment levels shall be maintained on-site and made available upon request during inspections. The Permittee must keep records of all submissions that are part of the permit NOI pertaining to the CWIS until the subsequent permit is issued to the Permittee. Nothing in this Permit authorizes “take” for the purpose of a facility compliance with the Endangered Species Act. Under the Endangered Species Act, “take” means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct, of endangered, or threatened species.

If an entity provides water to the permittee which is used for cooling by means of a surface water intake, the intake structure operated by the entity must be determined to represent the best technology available (BTA) to minimize adverse environmental impact in accordance with Section 316(b) of the federal Clean Water Act (33 U.S.C. section 1326).

If the entity providing water to the permittee is a public water system in accordance with Section 1401 of the Safe Water Drinking Act or the water used for cooling consists of treated effluent which would otherwise be discharged, the permittee is exempt from the requirements of this permit condition.

**DSN009:** Discharge limitations and monitoring requirements for uncontaminated storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas.

For facilities to have only DSN009 in lieu of DSN010, they must have BMPs and other procedures in place which address the fueling area and the petroleum storage area, they must have a valid SPCC Plan, if required by 40 CFR Part 112, and they must be determined by the Department to not have a significant potential for environmental impact.

**DSN010** Discharges of storm water from fueling, petroleum storage and handling, equipment storage, and maintenance areas

Rainfall

The amount of rainfall occurring during the monitored rain event is to be reported in inches. Monitoring frequency is 1/quarter.

pH pH limits are not imposed for storm water discharges as the permittee should not be influencing the pH of the discharge, and pH levels should not cause receiving stream water quality to be violated. Monitoring frequency is 1/quarter.

Benzene (Facilities that discharge into a body of water which is designated as a public water supply)

The Department is proposing a daily maximum limit of 1.12 µg/l for benzene. This limit is based on the benzene human health (consumption of fish and water) standard for streams designated as public water supply as set forth at ADEM Administrative Code R. 335-6-10. A limit of 1.12 µg/l for benzene should be protective of water quality. Monitoring frequency is 1/ quarter.

Benzene (All other areas)

The Department is proposing a limit of 15.5 µg/l for benzene. The human health (consumption fish only) standard for benzene is now 15.5 µg/l and should be protective of water quality. Monitoring frequency is 1/ quarter.

Ethylbenzene (Facilities that discharge into a body of water which is designated as a public water supply)

The Department is proposing a daily maximum limit of 448 µg/l for ethylbenzene. This limit is based on the ethylbenzene human health (consumption of fish and water) standard for streams designated as public water supply as set forth at ADEM Administrative Code R. 335-6-10. A limit of 448 µg/l for ethylbenzene should be protective of water quality. Monitoring frequency is 1/ quarter.

Ethylbenzene (All other areas)

The Department is proposing a limit of 1,244 µg/l for ethylbenzene. The human health (consumption fish only) standard for ethylbenzene is 1,244 µg/l and should be protective of water quality. Monitoring frequency is 1/ quarter.

Toluene (Facilities that discharge into a body of water which is designated as a public water supply)

The Department is proposing a daily maximum limit of 1,206 µg/l for toluene. This limit is based on the toluene human health (consumption of fish and water) standard for streams designated as public water supply as set forth at ADEM Administrative Code R. 335-6-10. A limit of 1,206 µg/l for toluene should be protective of water quality. Monitoring frequency is 1/ quarter.

Toluene (All other areas)

The Department is proposing a limit of 8,723 µg/l for toluene. The human health (consumption fish only) standard for toluene is 8,723 µg/l and should be protective of water quality. Monitoring frequency is 1/ quarter.

Xylene

The results of xylene will be used to track the effectiveness of the permittee's BMP plan. Monitoring frequency is 1/ quarter.

Naphthalene

The naphthalene daily maximum limit is 620 µg/l. In the absence of state water quality criteria for naphthalene, this limit is based on information contained in the EPA Quality Criteria for Water 1986 Document (EPA 440/5-86-001) May 1, 1986. This limitation has also been shown to be protective of water quality. While naphthalene is insoluble in water it is soluble in both benzene and toluene. Therefore, if benzene is sufficiently removed using BAT technology, the naphthalene should also be removed. Monitoring for naphthalene will only be required at facilities which handle aviation fuel, jet fuel or diesel fuel. Monitoring frequency is 1/ quarter.

Oil and Grease

The oil and grease daily maximum limit is 15 mg/l. This limit has been demonstrated through experience by the Department to be best conventional technology (BCT) to be achievable by gravity oil/water separators; however, to further ensure adequate oil removal occurs, a requirement for no oil sheen is also imposed. Monitoring frequency is 1/ quarter.

MTBE (methyl tertiary butyl ether)

MTBE is an oxygenate that is added to fuel and is found at many petroleum release sites.

The results of MTBE monitoring will be used to track the effectiveness of the permittee's BMP plan. Monitoring frequency is 1/ quarter.

New Sources

This permit does not authorize new sources or new discharges of pollutants of concern to impaired waters unless consistent with an EPA-approved Total Maximum Daily Load (TMDL) and applicable State law or determined by the Department to not cause or contribute to the impairment. Impaired waters are those that do not meet applicable water quality standards and are identified on the State of Alabama's 303(d) list, or an EPA approved TMDL. Pollutants of concern are those pollutants for which the water body is listed as impaired and contribute to the listed impairment.
