EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ARC TERMINALS HOLDIN EPA ID:: ALR000038596	500 VIADUCT ROAD	0 - 1/8 (0.000 mi.)	B4	11
CHICKASAW EPA ID:: ALD980603708	***400 SHIPYARD STREET***	***N 0 - 1/8 (0.046 mi.)***	***6***	***19***

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
DOW CHEM INC/DOWELL EPA ID:: ALD000770289	OLD GULF SHIPYARD	NE 0 - 1/8 (0.018 mi.)	B5	15

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 09/28/2023 has revealed that there are 2 FUDS sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ALABAMA STATE DOCKS		0 - 1/8 (0.000 mi.)	A1	8
MOBILE DEFENSE HOMES		0 - 1/8 (0.000 mi.)	A2	8

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/28/2023 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
The Clean Air Markets Division Business System (CAMDBS) supports the implementation of market-based air pollution control programs administered by the EPA Clean Air Markets Division, within the Office of Air and Radiation. Programs include the Acid Rain Program and regional programs designed to reduce the transport of ozone.
The Resource Conservation and Recovery Act Information System

CHICKASAW (Continued) **1000161708**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

HWS DETAIL: Alabama Hazardous Substance Cleanup Fund Annual Report

The Alabama Hazardous Substance Cleanup Fund (AHSCF) was established in 1989 by act of the Alabama Legislature (Code of Alabama 1975, 22-30A) to provide a mechanism for ADEM to investigate, remediate, and monitor hazardous substance sites. These sites may potentially endanger human health and the environment, but may not qualify to be addressed by other federal or state cleanup programs.

INST CONTROL: Land Division Brownfields 128(a) Program Site Listing

Institutional Controls (ICs) are non-engineered instruments, such as administrative and/or legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of a remedy by limiting land or resource use. There are five different types of controls. These are governmental, proprietary, enforcement tools with IC components, informational devices and unrestricted. Unrestricted- No institutional controls (unrestricted for industrial and residential use). Governmental- controls implemented and enforced by state and local governments. (zoning restrictions, ordinances, building permits, etc.). Proprietary- controls which have their basis in real property law (easements, covenants). Enforcement and Permit Tools with IC components- these controls are issued to compel land owners to limit certain site activities on both federal and private sites. Informational devices- informational tools with provide information or notification that residual or capped contamination may remain on site (deed or hazard notices).

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

PFAS: PFAS Contamination Site Listing

PFAS have been widely used in numerous industrial and residential applications since the 1950a??s. Their stability and unique chemical properties produce waterproof, stain resistant, and nonstick qualities in products. They are found in some firefighting foams and a wide range of consumer products such as carpet treatments, non-stick cookware, water-resistant fabrics, food packaging materials, and personal care products.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

South Map:	16646113 MOBILE, AL
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

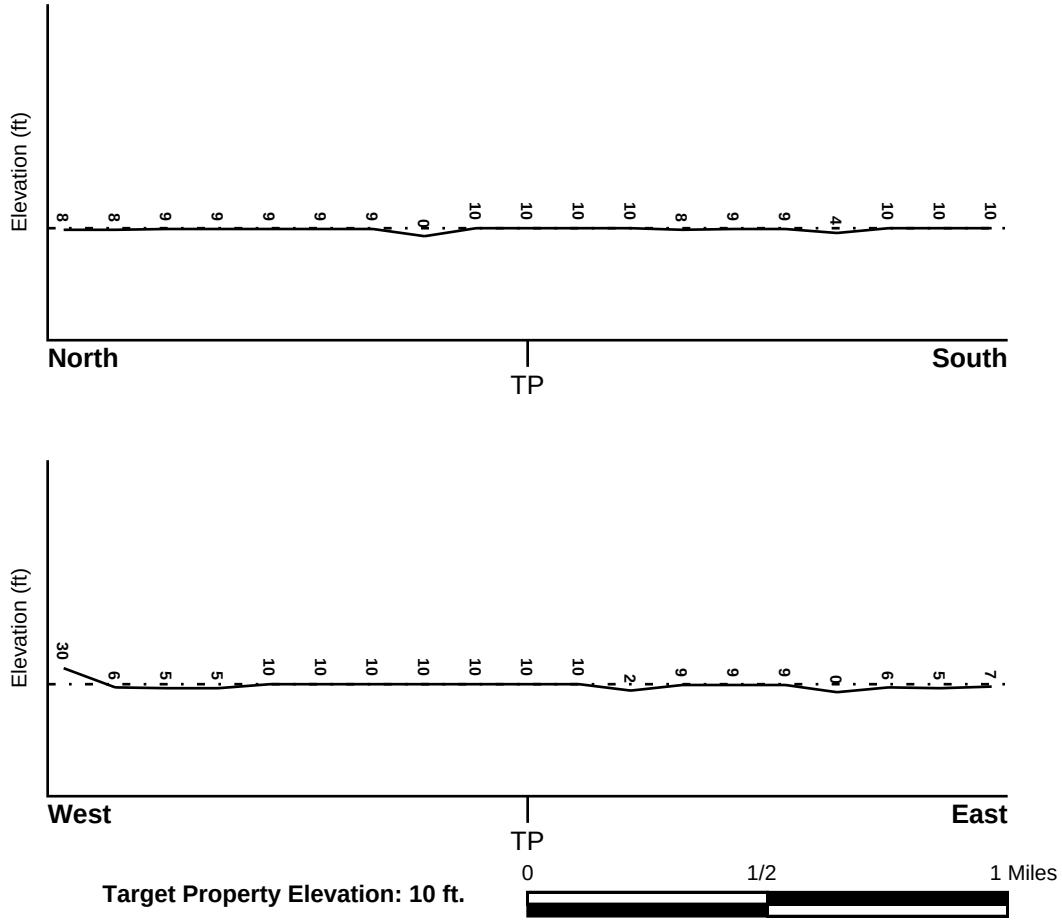
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Dorovan

Soil Surface Texture: mucky peat

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	79 inches	mucky peat	Not reported	Highly organic soils, Peat.	Max: 14 Min: 4	Max: Min:

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: mucky peat

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Miscellaneous Water

Soil Surface Texture: mucky peat

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-VSQG: A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

CHICKASAW MARINE TERMINAL
150 VIADUCT ROAD
MOBILE, AL 36610

TARGET PROPERTY COORDINATES

Latitude (North):	30.761546 - 30° 45' 41.57''
Longitude (West):	88.053463 - 88° 3' 12.47''
Universal Tranverse Mercator:	Zone 16
UTM X (Meters):	399175.8
UTM Y (Meters):	3403466.8
Elevation:	10 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	16646087 CHICKASAW, AL
Version Date:	2020
South Map:	16646113 MOBILE, AL
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

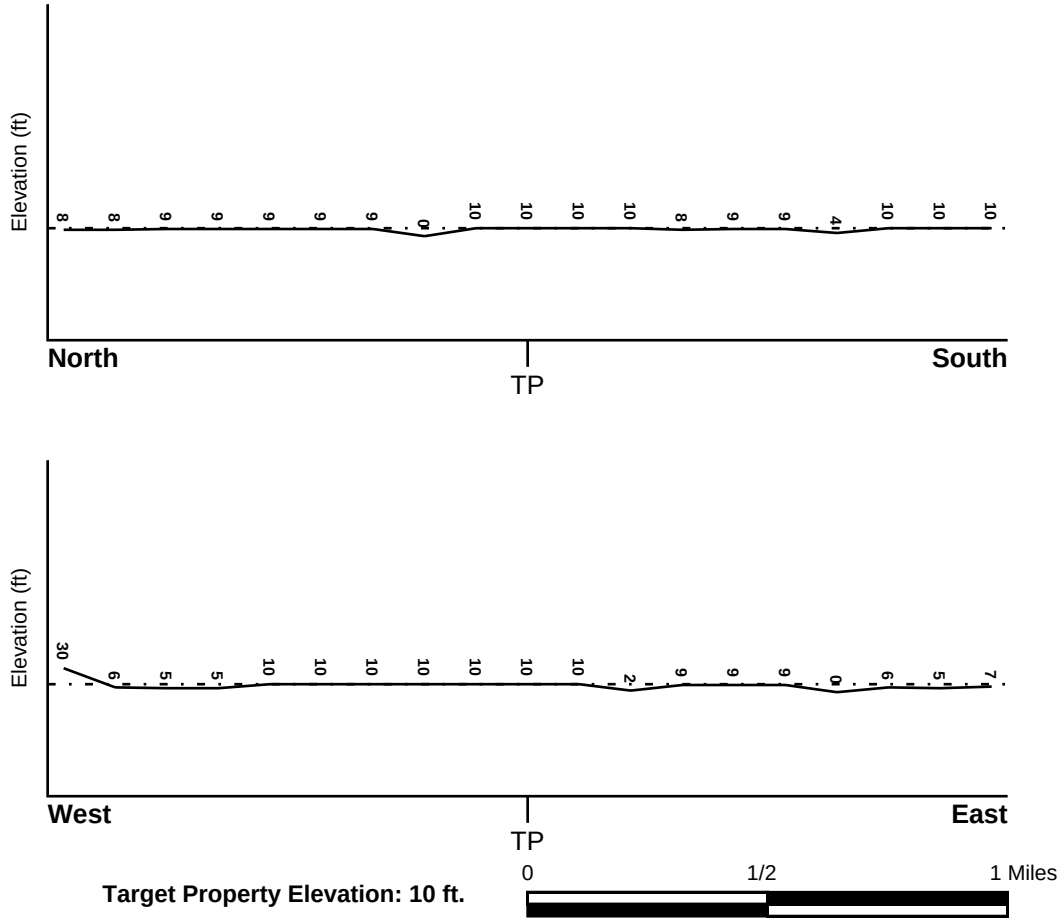
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
01097C0443K	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
01097C0439K	FEMA FIRM Flood data
01097C0552K	FEMA FIRM Flood data
01097C0556K	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CHICKASAW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Dorovan

Soil Surface Texture: mucky peat

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	79 inches	mucky peat	Not reported	Highly organic soils, Peat.	Max: 14 Min: 4	Max: Min:

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: mucky peat

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Miscellaneous Water

Soil Surface Texture: mucky peat

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Telephone: 334-844-3927

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Dear Mr. Johnson:

Personnel with ADEM have reviewed your request to dispose of approximately 200 cubic yards of petroleum contaminated soil and absorbant pads. According to the information submitted dated July 20, 1995, this waste appears to be non-hazardous in accordance with the applicable regulations.

We are approving the Timberlands Landfill, permit number 27-08, to accept this material for disposal. Contact Mr. Gary Merchant at (334) 867-8921 for permittee approval and any additional requirements prior to delivery.

Please note this letter does not exempt yuou from complying with applicable requirements of ADEM Administrative Code Division 335-14, Hazardous Waste Progam rules.

If you have any questions regarding this, please contact me at (334) 271-7819.

Sincerely,

Giles Steele-Perkins

_____ No, explain in full detail below, then go to 6.

3. **Excluded From Regulation**

Yes, explain in full detail below, then go to 6.

X No, continue to question 4.

4. **Listed Hazardous Waste**

_____ Yes, identify the EPA waste code in the space provided below, then go to 6.

X No, continue to question 5.

5. **Characteristic Hazardous Waste**

_____ Yes, identify the waste code in the space provided below and continue to 6.

X No, continue to 6.

6. **Petroleum Waste**

Does the waste contain any petroleum material?

X Yes, include a copy of the Total Petroleum Hydrocarbons (TPH) of the waste for every 20 cubic yards and the methods utilized.

_____ No, continue to question 7.

A. Does the waste contain or has it been contaminated with any leaded material?

X Yes, include a copy of a Toxicity Characteristic Leaching Procedure (TCLP) analysis for heavy metals.

_____ No, continue to question 7.

7. **Waste Description**

Estimated 200 cubic yards of petroleum contaminated soil generated by the excavation of the Site to construct a transmission powerline tower (230 KVTL Line) support structure. Source of contamination unknown - believed to be Asphalt, Bunker C / Diesel type contamination. WASTE Also contains Absorbents and pads.

One time only Request for disposal.

No Recycling options Available

Analytical shows waste to be non-HAZARDOUS

** **If additional space is needed, attach a separate sheet.**
Upon completion, continue to 8.

8. Intended method of Disposal-List Facility name and Permit Number if intended for disposal at a Solid Waste Disposal Facility.

Timberlands Landfill Permit # 27-08

Upon completion, continue to 9.

9. Certification

I certify under penalty of law that this waste material is not an infectious or hazardous waste and that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to be the best of my knowledge and belief, true accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Dear Mr. Johnson:

Personnel with ADEM have reviewed your request to dispose of approximately 200 cubic yards of petroleum contaminated soil. According to the information submitted dated July 26, 1995, this waste appears to be non-hazardous in accordance with the applicable regulations.

We are approving the Timberlands Landfill, Permit Number 27-08, to accept this material for disposal. Contact Mr. Gary Merchant at (334) 867-8921 for permittee approval and any additional requirements prior to delivery.

Please note this letter does not exempt you from complying with applicable requirements of ADEM Administrative Code Division 335-14, Hazardous Waste Program Rules.

If you have any questions regarding this, please contact Mr. Giles Steele-Perkins at (334) 271-7819.

Sincerely,

John Warramore, Chief
Compliance Section
Solid Waste Branch
Land Division

3. **Excluded From Regulation**

Yes, explain in full detail below, then go to 6.

X (No), continue to question 4.

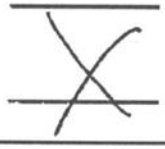
4. Listed Hazardous Waste

_____ Yes, identify the EPA waste code in the space provided below, then go to 6.

No, continue to question 5.

5. Characteristic Hazardous Waste

_____ Yes, identify the waste code in the space provided below and continue to 6.



No, continue to 6.

6. **Petroleum Waste**

Does the waste contain any petroleum material?

X Yes, include a copy of the Total Petroleum Hydrocarbons (TPH) of the waste for every 20 cubic yards and the methods utilized.

_____ No, continue to question 7.

A. Does the waste contain or has it been contaminated with any leaded material?

X Yes, include a copy of a Toxicity Characteristic Leaching Procedure (TCLP) analysis for heavy metals.

_____ No, continue to question 7.

7. **Waste Description**

Estimated 200 cubic yards of petroleum contaminated soil generated by the excavation of the site to construct a transmission powerline tower (230 KVTL Line) support structure. Source of contamination unknown - believed to be Asphalt, Bunker C / Diesel type contamination. Waste also contains Absorbents and pads.

One time only Request for Disposal.

No Recycling options available

Analytical shows waste to be non-hazardous

** If additional space is needed, attach a separate sheet. Upon completion, continue to 8.

8. Intended method of Disposal-List Facility name and Permit Number if intended for disposal at a Solid Waste Disposal Facility.

Timberlands Landfill Permit # 27-08

Upon completion, continue to 9.

9. Certification

I certify under penalty of law that this waste material is not an infectious or hazardous waste and that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to be the best of my knowledge and belief, true accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

ALABAMA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

SOLID/HAZARDOUS WASTE DETERMINATION*

In an effort to accurately identify all industrial solid wastes received at Solid Waste Disposal Facilities and in conjunction with ADEM Administrative Code, Division 14, Hazardous Waste Regulations, the Department has adopted the following guidelines for industries that generate wastes.

Each facility waste stream must be approved on an annual basis, or whenever a process changes, thereby producing a new or different waste, whichever is more frequent.

Requests for approval to dispose of any materials at a Solid Waste Disposal Facility in the State of Alabama must provide complete and comprehensive information to the following questions for each individual waste stream:

Please respond to each question on the attached form.
A separate form must be completed for each waste stream.

(1) General Facility Information

Upon completion, continue to 2.

(2) Is the waste a Solid Waste as defined in Rule 335-14-2-.01(2)?

If Yes, continue to question 3.

If No, explain in full detail and go to 6.

(3) Is the waste excluded from regulation under Rule 335-14-2-.01(4)?

If Yes, explain in full detail and go to 6.

If No, continue to question 4.

(4) Is the waste a Listed Hazardous Waste as identified in Rule 335-14-2-.04?

If Yes, identify the EPA waste code and go to 6.

If No, continue to question 5.

(5) Is the waste a Characteristic Hazardous Waste as identified in Rule 335-14-2-.03?

If Yes, identify the EPA waste code and continue to 6.

If No, continue to 6.

* **This application is not to be used for pre-approval of Solid Waste at a Commercial Hazardous Waste Disposal Facility in the State of Alabama.**

(6) Does the waste contain any petroleum hydrocarbons?

If Yes, include a copy of the Total Petroleum Hydrocarbons (TPH) of the waste for every 20 cubic yards and the methods utilized.

If No, continue to question 7.

(A) Does the waste contain or has it been contaminated with any leaded material? If yes, include a copy of a Toxicity Characteristic Leaching Procedure (TCLP) analysis for heavy materials.

If No, continue to question 7.

(7) A detailed description of the waste steam must include at a minimum the following areas.

(A) Physical characteristics of the waste.

(B) Type of waste (liquid, solid, soil, debris, bladeable sludge, etc)

(C) Waste Analysis, including P.H. of waste.

(D) Background of waste (detailed description of process that produced waste stream, historical information).

(E) Estimated quantity of waste generated per calendar month. Report units of measure (i.e. tons, cubic yards, gallons, etc.)

(F) Information on availability of potential for recycling.

Upon completion, continue to 8.

(8) The intended method of disposal must be identified. If the waste will be disposed of at a Solid Waste Disposal Facility, said Facility must be identified by facility name and permit number.

Upon completion, continue to 9.

(9) The Certification for submitted information must be signed and dated by an authorized representative of the Company.

** Incomplete applications will be returned to the sender without review or approval until completed.

To place an order for ADEM, Administrative Code, Division 14, Hazardous Waste Regulations, please send a request in writing along with a check or money order for $41.00 to:

Qualifications

DAVID WALL, REM

Technical Scientist

David Wall brings to LaBella over 18 years of expertise as an environmental scientist with a strong background in soil and groundwater investigations and remediation for Resource Conservation and Recovery Act (RCRA), Brownfield, and Underground Storage Tank (UST) sites. Extensive experience in environmental due diligence for real estate investment portfolios, industrial acquisitions, and other commercial real estate matters. He has over six years of management expertise supervising, mentoring, and training professional and technical employees. His relevant project experience includes;

EDUCATION

University of Montevallo: B.S. Biology

CERTIFICATIONS

40- hour Wetland Delineation Course

40-hour OSHA Certification

Alabama Risk Based Corrective Action Guidance Training

Phase I Site Assessments and Due Diligence

Sanitas Applied Groundwater Statistics

ORGANIZATIONS

Registered Environmental Manager Certification

Member Birmingham Environmental Professionals Association (BEPA)

Member North Alabama Environmental Professionals Association (NEPA)

Member Alabama Brownfields Association (ALBFA) and Economic Development Committee

LaBella
Powered by partnership.

Former Maxus Agricultural Chemicals

David currently serves as project manager for a closed industrial wood pulp manufacturing facility located adjacent to the Black Warrior River. His role includes; oversight of post-closure corrective action activities and groundwater monitoring, management of project finances, oversight of operation and maintenance associated with a groundwater extraction system, underground injection system, an on-site groundwater treatment plant, and periodic riverbank stability repairs, coordination and planning with the project team; scheduling/oversight of weekly site visits, oversight of groundwater sampling events, preparation of monthly operation and maintenance reports, and required ADEM reports including an Annual Corrective Action Report, UIC Report, and Alabama Risk Based Corrective Action (ARBCA) Evaluation.

Auburn University—Auburn, AL

David serves as a project manager assisting Auburn University with its Resource Conservation Recover Act (RCRA) permitted sites throughout the University campus. Sites include numerous underground storage tank release sites, waste oil recycling facility, and several other solid waste management units (SWMUs). Activities have included completion of RCRA Facility Investigation (RFI) Work Plans and Assessments, ARBCA Evaluations, Corrective Action Plans, RCRA permit modifications, and on-going site monitoring and reporting. Auburn has successfully achieved clean-up and closure of numerous sites within the RCRA permit.

Jacks Family Restaurant, Sites throughout Alabama

Served as project manager for three Jack's Restaurant Sites which successfully completed the requirements of the ADEM Voluntary Clean-up Program (VCP). Each of the sites were entered into the ADEM VCP and assessed following ADEM approval of an assessment plan prepared by HTSI (now LaBella). Assessment activities included the installation of soil borings and monitoring wells at each of the sites and groundwater monitoring. Correction activities at two of the sites included the preparation of

environmental covenants and the sites issued Conditional Letters of Concurrence. The remaining site was able to achieve clean-up without use restrictions and was issued a Letter of Concurrence.

McWane Pipe— Birmingham, AL

David served as project manager and was responsible for the clean-up and successful completion of ADEM requirements for a diesel fuel release at a steel mill facility in Birmingham, Alabama. The facility participated in the ADEM Alabama Tank Trust Fund (ATTF) which paid for the clean-up activities. The project included several phases of assessment, installation of numerous Type II monitoring wells and one Type III well, removal of free product, preparation of an ARBCA evaluation, Corrective Action Plan, and on-going groundwater monitoring. The site successfully achieved No Further Action with Conditions status from the ADEM.

Altman Property Site— Birmingham, AL

Served as project manager for a site located on a former light industrial use property that underwent commercial redevelopment. The site was entered into the ADEM VCP and successfully completed the requirements of the ADEM Brownfield Program. The site was assessed following ADEM approval of an assessment plan. Assessment activities included the installation of soil borings and monitoring wells at each of the sites and groundwater monitoring. Corrective Action activities at the site included a combination of engineering controls and land use restrictions, which resulted in achieving No Further Action with Conditions status from the ADEM. The site was redeveloped and currently operates as a successful commercial retail facility.

DANIEL GOSSETT

Phase I ESA Manager

Daniel is an Environmental Professional (EP) with more than 17 years of experience with Phase I Environmental Site Assessments (ESAs). He has managed and performed hundreds of Phase I ESAs on various property types, such as large industrial sites, large undeveloped wooded sites as well as service stations and various commercial properties. Daniel has provided various regulatory compliance services to municipal, commercial, and industrial entities including SWPPP and SPCC drafting, discharge monitoring reports, and various other submittals on behalf of the client. Further, he has managed and performed numerous stormwater inspections of construction sites as well as other industrial sites required under NPDES regulation regulations for the Alabama Department of Environmental Management (ADEM). Daniel has responded to multiple violations and consent orders on behalf of private and local governmental clients. Earlier in his career, Daniel managed and oversaw a mercury remediation project and a hazardous materials emergency response project which both required specialized knowledge related to Department of Transportation (DOT), Environmental Protection Agency (EPA), and Drug Enforcement Agency (DEA) regulations.

involved reviewing a complex development history to determine recognized environmental conditions (RECs). Daniel assisted with a building materials survey to help identify business environmental risks (BERs) associated with the renovation of the building. This project involved safety coordination between coworkers, the client, the property owner, and third-party security personnel.

NPDES Stormwater Experience

Love's Travel Stops—Heflin, AL*

Project Manager for a construction stormwater inspection project to construct a Love's Travel Stop & Country Store. Daniel coordinated and performed inspections, trouble-shooting erosion & sediment control issues with multiple entities, and provided guidance on stormwater permit compliance. Because of a good partnership with the general contractor and effective communication with all involved, this work was finished on schedule, within budget, and to the satisfaction of the client and other parties with whom we worked.

Midfield Quarry—Midfield, AL*

Project Manager for a construction stormwater site for a major waste recycling company. When Daniel and his team were first approached about coming on board as the consultant for this work, the client was already in receipt of a proposed Consent Order from the Alabama Department of Environmental Management (ADEM) for alleged violations of environmental stormwater regulations. Daniel was able to negotiate on behalf of this client for a reduced fine, a significantly reduced scope of required remediation, and was able to successfully complete the permitting process and remediation activities to the satisfaction of the client and regulatory agency. Project received a final consent order, a stabilized site, and a cordial relationship between ADEM and the client.

BH Transfer—Sylacauga, AL*

Project Manager for a state indirect discharge (SID) permit at B-H Transfer's Sylacauga Terminal tank washing facility. Work included managing and performing monthly sampling of the facility's effluent, preparation of monthly discharge monitoring reports (DMRs), assisting with noncompliance reports, and miscellaneous assistance.

CHEY-ANNE KILPATRICK

Brownfield Redevelopment & Grant Specialist

Chey-Anne brings a wealth of knowledge and experience related to Brownfields and the Alabama Department of Environmental Management (ADEM) Voluntary Cleanup Program (VCP). She previously worked at the ADEM within the Redevelopment Unit of Land Division. With the VCP, she was the project manager of over 15 active sites. With Brownfield Redevelopment, she assisted communities and non-profits with brownfield identification and environmental site assessments (ESA). She has led several community meetings and spoken during several speaking engagements to inform individuals of the benefits and processes to redevelop Brownfields. Chey-Anne has organized several grant writing courses for communities throughout the State and assisted the ADEM with writing EPA Brownfield Grants.

WILLIAM DIRENZO

Environmental Scientist

William's experience as an Environmental Scientist includes working on Phase I and Phase II Environmental Site Assessments (ESAs) and investigation and remediation under the Brownfield Cleanup Program. William is responsible for performing Phase I ESAs, Transaction Screens, and Risk Assessment Reports. He has also performed numerous Phase II ESAs that include overseeing direct push soil boring for on-site soil sampling and groundwater monitoring well installation. William has spent extensive time on active construction sites monitoring Brownfield Cleanup Program remediation projects. William also has experience performing New York Storm Water Pollution Prevention Plan (SWPPP) inspections at active construction sites.

Brownfields

East Lake Commons LLC, Oswego Midtown Plaza Brownfield Cleanup Program: Oswego, NY

William provided Community Air Monitoring Plan (CAMP) oversight during the removal of soils as earthwork occurred. William was responsible for tracking all soils relocated by an environmental contractor, including the excavation of historical fill and import of geotechnical backfill. Construction of a five-story mixed use building was completed in early 2022.

DePaul Group, Former Breneman Site: Oswego. NY

William provided CAMP oversight during the removal of soils as earthwork occurred. William ensured all soils were handled in accordance with Brownfield Cleanup Program regulations and that material reused on-site was done so in accordance with the NYSDEC approved Site Management Plan.

PG Carpenter Park LLC, Cayuga Park: Ithaca, NY

William provided monitoring oversight during the implementation of the Environmental Management Plan (EMP) to address environmental concerns associated with planned earthwork, construction, and development of a four building complex in Ithaca, New York. As part of this work, William oversaw the removal of over 18,000 tons of soil for re-use at other locations in accordance with the NYSDEC.

Phase II ESA

Phase II ESAs: New York State

William has conducted Phase II ESAs at various sites across New York State. Activities include: selecting soil boring/ groundwater monitoring well locations based on previous site activities, working alongside Geoprobe direct push soil borings, logging and screening soil borings using olfactory method, selecting samples based on field observations, groundwater monitoring and well installation.

Phase I ESAs

William has conducted numerous Environmental Site Assessments. These assessments have included the evaluation of environmental liability associated with properties such as warehouses, gas stations, colleges, commercial properties, and residential homes. William has completed environmental assessments for the following groups:

- Lyons National Bank
- TruMark Financial Credit Union
- Community Bank
- Five Star Bank
- Rochester Gas and Electric
- OYA Solar NY
- Bond, Schoeneck & King
- Tiffany Energy LLC
- The Effect Group

SWPPP Inspections

William conducted weekly SWPPP inspections for the construction of new solar fields. He provided inspection reports in accordance with the NYSDEC Blue Book. William worked with project engineers to direct contractors on proper erosion and sediment control measures.

- Green Spark – Verona Solar – SWPPP Inspection
- Light Edison – Taft Solar – SWPPP Inspection
- Light Edison – Locust Solar – SWPPP Inspection
- Nexamp Inc – Sulphur Creek Solar – SWPPP Inspection
- Nexamp Inc – Sparrow Bush Solar – SWPPP Inspection
- Precision Solar Renewables - Eureka Solar North & South – SWPPP Inspection

SUBJECT: Report of Modified Phase I/II Environmental Site Assessment
Vacant Lot on Viaduct Road in Mobile County, Chickasaw, Alabama
Job No: 98-2005

Dear Mr. Buchanan:

Analytical Chemical Testing Laboratory, Inc. (ACT Lab.) is pleased to submit this authorized Modified Phase I/II Environmental Site Assessment. The enclosed report presents our findings in accordance with the investigative procedures outlined herein. The Modified Phase I/II assessment was performed in substantial compliance with ASTM E 1527-97 and ASTM E 1528-96.

We appreciate the opportunity to provide these services and look forward to working with you in the future. Should you have any questions, please give us a call at your convenience.

1.0 EXECUTIVE SUMMARY

Analytical Chemical Testing Laboratory, Inc. (ACT) was retained by B&F Terminals to provide a Modified Phase I/II Environmental Site Assessment (ESA) of the property located at Viaduct Road in Mobile County, Chickasaw, AL. The site consisted of a vacant lot.

The Modified Phase I/II Environmental Site Assessment consisted of physical inspection and review of applicable and obtainable information of the subject property. The property was visited on June 26, 1998 and inspected in general accordance with the scope of work, ACT's standard environmental assessment procedures and ASTM E 1527-97. The Modified Phase I/II assessment was intended to provide an overview of the properties and environmental conditions as a result of current and past site activities.

ACT personnel drilled 18 hand auger soil borings in various areas that, by appearance could potentially be contaminated. Samples were then collected from each boring and site location and sent to the laboratory to determine the presence of petroleum contamination. The results indicate that some areas, particularly near the ditch, had levels that were elevated above the Alabama Department of Environmental Management (ADEM) Corrective Action Limit (CAL) for TPH in soils of 100 mg/Kg. One water sample was obtained from a soil boring beside the ditch and was analyzed for BTEX. The results from the water sample were below the ADEM CAL.

Based on ACT's site inspection and records review as performed during the Modified Phase I/II Site Assessment, the overall condition of the property appeared to be fair. Some apparent areas of potential environmental concern were identified at the site, particularly along the ditch that is located on the site.

ACT recommends continuing the Phase II Investigation to determine the extent of the soil contamination on the property. ACT also recommends sampling the soil and groundwater under the guidelines of the April 1998 ADEM regulations for Risk Based Corrective Action (RBCA) analyzing for Chemicals of Concern (COC). If all COC are below the Initial Screening Levels (ISLs) as outlined in ADEM's RBCA guidelines, then possibly no remediation would be required at the site.

2.0 INTRODUCTION

This Environmental Site Assessment (ESA) Phase I/II report presents the findings and conclusions of our study of the property located at the vacant lot on Viaduct Road, in Section 26, T3S, R1W in Mobile County, Mobile, AL. The purpose of the assessment was to provide general information regarding the presence of, or the potential for, hazardous materials at the site for use in the evaluation of the property.

2.1 Background Information

ACT utilized several sources of information to perform this evaluation of the property. Database information, available under the Freedom of Information Act, was obtained from EDR in Southport CT.

3.0 GENERAL INFORMATION

3.1 Property Description

The property was located close to 50 Viaduct Road in Mobile County, Mobile, AL. The site consisted of vacant land. Figure 1, a topographic map from the United States Geological Survey, shows the site location as well as the topography of the surrounding area. The area topography is relatively flat. Figure 2 is a smaller scale street map showing the location of the site.

3.2 Surrounding Properties

The property is bound on the north by Coastal Refinery, west and south by undeveloped property, and east by B&F Terminal. A road separates the site from B&F Terminal and a ditch is located on the north side of the property.

3.3 Regional Soil/Geology/Hydrogeology

ACT reviewed the Geologic Map for Mobile County (Figure 3). The site is located in the southwest part of Alabama.

The Geologic setting for this site is as follows: South Alabama is underlain by a series of sedimentary formations, composed primarily of sand, gravel, clay, marl, and limestone. Most of the exposed deposits are comprised of deltaic or estuarine sediments that are essentially horizontal, dipping southward at less than one degree, 15 to 25 feet per mile. These sediments range in age from Miocene through Pliocene and Pleistocene. In many places they are overlain by younger Pleistocene and Holocene terrace and stream deposits.

GEOLOGIC MAP OF MOBILE AND BALDWIN COS.

Job # **98-2005** | Date: **7/6/98** | **FIGURE 3**

EXPLANATION

System	Series	Stratigraphic unit	Map symbol	Lithology
Quaternary	Holocene	Alluvium, coastal, low terrace	Qalt	Very pale-orange to grayish-orange varicolored fine to coarse quartz sand containing clay lenses and gravel in places. Gravel composed of quartz and chert pebbles. Coastal deposits include fine to medium quartz sand with shell fragments and accessory heavy minerals along Gulf beaches: fine to medium quartz sand, silt, clay, peat, mud and ooze in Mississippi Sound, Little Lagoon, bays, lakes, streams, and estuaries.
	Pleistocene			
		High terrace	Qt	Pale-yellowish-orange to moderate-reddish-brown lenticular beds of poorly sorted sand, ferruginous sand, silt, clay, and gravel. Sand composed primarily of very fine to very coarse poorly sorted quartz grains; gravel composed mainly of quartz and chert pebbles.
Tertiary	Pliocene	Citronelle Formation	QTci	Moderate-reddish-brown deeply weathered fine to very coarse quartz sand and varicolored typically mottled lenticular beds of clay and clayey gravel. Limonite pebbles and lenses of limonite cemented sand occur locally in weathered exposures. Gravel is composed of chert and quartz pebbles.
	Miocene	Miocene undifferentiated	Tm	Thin-bedded to massive fine to coarse quartz sand, gravelly sand, thin-bedded to massive clay, and sandy clay; clays are plastic in part. Gravel is composed of quartz and chert granules and pebbles. Locally, the upper part of the unit is Pliocene in age.

~~~

All of these sediments for the most part are permeable and the entire sequence is usually considered as a single, continuous unconfined aquifer with discontinuous localized aquicludes occurring. Formations of concern for this report are the Miocene Series, Pliocene and Pleistocene Series, and Holocene. Sediments of Miocene age in Alabama are believed to represent a transition between the better known estuarine and deltaic deposits of the Catahoula Sandstone - Hattiesburg Formation - Pascagoula Formation sequence to the west in Mississippi. The sands and clays that comprise the Miocene beds are discontinuous and subject to abrupt lateral and vertical variations.

The Pliocene and Pleistocene Series consists of the Citronelle Formation locally which is comprised of layers and lenses of interbedded sands and clays with occasional beds of gravel. The Citronelle sediments were deposited under a combination of fluviatile and estuarine conditions, and they vary both laterally and vertically, and few, if any, marker beds are available for correlation over much distance. The thickness of the Citronelle varies from a very thin mantle to approximately 140 feet and it occurs as a cap on the interfluve areas throughout South Alabama. The formation consists largely of sand throughout South Alabama and is considered the principal aquifer. The sand units of the Citronelle Formation overlie Miocene sands and, in many places, there is no impermeable barrier separating them. The interconnection of these sand units causes this entire unit to be considered as one large aquifer. The aquifer can yield 1 mgd per well and can be larger. Larger capacity municipal wells that tap this aquifer range in depth from 94 to 800 feet.

The Holocene consists of alluvium and the thickness of this alluvium ranges from a thin veneer to more than 150 feet near Mobile. In general, the alluvium consists of beds and lenses of fine to coarse gravel, fine to coarse grained sand, silty sand, silt, sand clay, soft to stiff clay and carbonaceous material. Bedding is usually lenticular and interfingering of the sediments is common. Individual beds cannot be correlated over great distances. Many of the large capacity (50 to 800 gpm) water wells developed in the alluvium in the Mobile area produce from the coarser deposits at or near the base of the alluvium where it is in contact with the underlying Citronelle Formation.

4.0 ENVIRONMENTAL INFORMATION AND DATA

4.1 Hazardous Materials

No visible hazardous materials were observed at the site.

4.2 Underground and Aboveground Storage Tanks

One skid mounted 500 gallon above ground storage tank (AST) was observed at the terminal. No underground storage tanks (UST) were observed at the site.

4.3 Site Investigation

A visual reconnaissance of the property was conducted during the site visit on June 26, 1998 for signs of the possible use, storage and/or disposal of hazardous waste/materials on the site. The inspection was performed by viewing the existing property, walking around the building and in open spaces and observing and noting the physical conditions of the site. Some areas appeared to have a potential for contamination and were examined further as discussed in Section 6 of this report.

The site reviewed consisted of vacant land and a ditch in the northern portion of the property.

Photographs of pertinent features are included in Appendix I.

4.4 Housekeeping

The property in general was covered with grassy vegetation, sparse brush, and was clean of any debris.

5.0 REGULATORY/GOVERNMENTAL AGENCY INQUIRIES

EDR in Southport, CT was used to obtain information from federal and state agencies concerning these properties. This information is as follows:

5.1 Federal/State

ACT conducted a review of the U.S. EPA Comprehensive Environmental Response, Compensation and Liability Index System (CERCLIS) list for the State of Alabama. The CERCLIS list contains properties included on the EPA Superfund list. These records indicate that the subject site is not listed as a CERCLIS site. No CERCLIS facilities were identified within 1/2 mile of the subject site.

CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity. A review of the CORRACTS list indicate that the subject site is not listed as a CORRACTS site. No CORRACTS site was listed within a mile of the subject site.

The EPA Resource Conservation and Recovery Act Index System List (RCRIS) for facilities in Mobile County was also reviewed. The subject site is not listed as RCRIS site. No RCRIS sites were identified within 1/4 mile radius of the subject site. No RCRIS small or large quantity generator sites were identified within 1/4 mile of the site. The RCRIS list reports those facilities and/or locations that are handling, storing or transporting hazardous substances or wastes.

Inclusion on RCRIS does not necessarily indicate contamination, but rather the potential due to the presence and handling of hazardous substances.

The EPA Emergency Response Notification System (ERNS) listing for Mobile County was reviewed. No ERNS sites were identified at the subject site.

ACT conducted a review of the State of Alabama Leaking Underground Storage Tanks (UST) list. No leaking underground storage tanks were identified within 1/2 mile of the subject site.

ACT conducted a review of the State of Alabama Registered Underground Storage Tanks (UST) list. No regulated underground storage tank sites were identified within 1/4 mile of the subject site.

ACT conducted a windshield survey to identify UST sites within 1/4 mile of the site. No UST sites were identified within 1/4 mile of the site.

ACT conducted a review of Dept. of Environmental Management Solid Waste Branch/Land Division records to determine if any landfills were within 1/2 mile of the subject property. None were located within a 1/2 mile.

Copies of the federal listings and the Leaking UST lists for Mobile County are included in Appendix II.

6.0 SOIL INVESTIGATION

As part of this modified Phase I/II, ACT drilled 18 soil borings on the property. The areas sampled were located throughout the site. The location of the borings drilled and soil samples collected is indicated on Figure 4. The borings were drilled with a hand auger to depths ranging from just beneath the surface to 6 feet. The soil in this area is dredge spoil sand. Soil samples were then collected from each boring and transported to ACT Laboratory, Inc. to determine the presence of any petroleum contamination. The samples were analyzed for Total Petroleum Hydrocarbons and none of the samples had TPH levels greater than ADEM's action limit for soil of 100 mg/Kg as indicated in Table 1. One water sample from the ditch was collected and analyzed for BTEX. The results from the water sample were below the ADEM CAL.

A copy of the analytical results is included in Appendix III.

7. CONCLUSIONS AND RECOMMENDATIONS

Based on ACT's site inspection and records review as performed during the Modified Phase I/II Site Assessment, the overall condition of the property appeared to be fair. Some apparent areas of potential environmental concern were identified at the site, particularly along the ditch that is located on the site.

ACT recommends continuing the Phase II Investigation to determine the extent of the soil contamination on the property. ACT also recommends sampling the soil and groundwater under the guidelines of the April 1998 ADEM regulations for Risk Based Corrective Action (RBCA) analyzing for Chemicals of Concern (COC). If all COC are below the Initial Screening Levels (ISLs) as outlined in ADEM's RBCA guidelines, then possibly no remediation would be required at the site.

8.0 QUALIFICATIONS OF REPORT

This report is intended for the use of B&F Terminals in the evaluation of the subject property. ACT is not responsible for opinions, conclusions or recommendations made by others based on the findings of this report. The conclusions presented in this report are our professional opinions based on the findings obtained in accordance with customary practices, principles and methodologies utilized in the fields of environmental science and engineering.

No investigation can absolutely deny the existence of hazardous materials since existing hazardous materials can escape detection using the customary methods. The conclusions of the environmental assessment are based on conditions as observed during our site visit and historical information about the site. Future changes in environmental conditions and site characteristics may occur with passage of time, in which case the conclusions of this report may have to be re-evaluated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-97. Search distances are per ASTM standard or custom distances requested by the user.

The address of the subject property for which the search was intended is:

50 VIADUCT ROAD
CHICKASAW, AL 36611

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the subject property or within the ASTM E 1527-97 search radius around the subject property for the following Databases:

NPL:	National Priority List
Delisted NPL:	NPL Deletions
RCRIS-TSD:	Resource Conservation and Recovery Information System
SHWS:	State Haz. Waste
CERCLIS:	Comprehensive Environmental Response, Compensation, and Liability Information System
CERC-NFRAP:	Comprehensive Environmental Response, Compensation, and Liability Information System
CORRACTS:	Corrective Action Report
SWF/LF:	Permitted Landfills
LUST:	Leaking Underground Storage Tank Listing
UST:	UST Data with Owner/Site/Tank Information

GROUNDWATER FLOW INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, including well data collected on nearby properties, regional groundwater flow information (from deep aquifers), or surface topography.‡

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM RECORDS:

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA/NTIS
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/31/97
Date Made Active at EDR: 04/13/98
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 02/17/98
Elapsed ASTM days: 55
Date of Last EDR Contact: 05/22/98

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/97
Date Made Active at EDR: 01/02/98
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 12/04/97
Elapsed ASTM days: 29
Date of Last EDR Contact: 03/05/98

NPL: National Priority List
Source: EPA
Telephone: 703-603-8852
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC).

Date of Government Version: 09/25/97
Date Made Active at EDR: 11/28/97
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 09/26/97
Elapsed ASTM days: 63
Date of Last EDR Contact: 02/06/98

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 01/01/98
Date Made Active at EDR: 04/13/98
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 02/17/98
Elapsed ASTM days: 55
Date of Last EDR Contact: 06/05/98

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/15/97
Date Made Active at EDR: 02/02/98
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 01/05/98
Elapsed ASTM days: 28
Date of Last EDR Contact: 05/06/98

FEDERAL NON-ASTM RECORDS:

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/95
Database Release Frequency: Biennially
Date of Last EDR Contact: 03/24/98
Date of Next Scheduled EDR Contact: 06/22/98

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: Varies
Database Release Frequency: Varies
Date of Last EDR Contact: Varies
Date of Next Scheduled EDR Contact: N/A

FINDS: Facility Index System
Source: EPA/NTIS
Telephone: 703-908-2493
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/01/97
Database Release Frequency: Quarterly
Date of Last EDR Contact: 02/26/98
Date of Next Scheduled EDR Contact: 06/22/98

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4526
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/96
Database Release Frequency: Annually
Date of Last EDR Contact: 03/31/98
Date of Next Scheduled EDR Contact: 07/27/98

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 01/30/98
Database Release Frequency: Quarterly
Date of Last EDR Contact: 04/13/98
Date of Next Scheduled EDR Contact: 07/13/98

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 05/26/98
Date of Next Scheduled EDR Contact: 08/24/98

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-260-3936
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 09/22/97
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 06/05/98
Date of Next Scheduled EDR Contact: 08/17/98

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/15/98
Date of Next Scheduled EDR Contact: 09/14/98

ROD: Records Of Decision
Source: NTIS
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 03/31/95
Database Release Frequency: Annually

Date of Last EDR Contact: 05/22/98
Date of Next Scheduled EDR Contact: 08/31/98

TRIS: Toxic Chemical Release Inventory System
Source: EPA/NTIS
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/95
Database Release Frequency: Annually

Date of Last EDR Contact: 06/11/98
Date of Next Scheduled EDR Contact: 06/29/98

TSCA: Toxic Substances Control Act
Source: EPA/NTIS
Telephone: 202-260-1444
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site. USEPA has no current plan to update and/or re-issue this database.

Date of Government Version: 12/31/94
Database Release Frequency: Annually

Date of Last EDR Contact: 04/27/98
Date of Next Scheduled EDR Contact: 07/27/98

STATE OF ALABAMA ASTM RECORDS:

LUST: Leaking Underground Storage Tank Listing
Source: Department of Environmental Management
Telephone: 334-270-5655
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 01/02/98
Date Made Active at EDR: 04/29/98
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/31/98
Elapsed ASTM days: 29
Date of Last EDR Contact: 05/11/98

SHWS: Hazardous Substance Cleanup Fund
Source: Department of Environmental Management
Telephone: 334-271-7984
State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 10/01/97
Date Made Active at EDR: 12/01/97
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 11/03/97
Elapsed ASTM days: 28
Date of Last EDR Contact: 06/03/98

LF: Permitted Landfills
Source: Department of Environmental Management
Telephone: 334-271-7988
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 02/01/98
Date Made Active at EDR: 04/29/98
Database Release Frequency: Annually
Date of Data Arrival at EDR: 03/30/98
Elapsed ASTM days: 30
Date of Last EDR Contact: 05/18/98

UST: UST Data with Owner/Site/Tank Information
Source: Department of Environmental Management
Telephone: 334-270-5655
Registered Underground Storage Tanks. UST's are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program.

Date of Government Version: 01/02/98
Date Made Active at EDR: 05/15/98
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 04/13/98
Elapsed ASTM days: 32
Date of Last EDR Contact: 05/11/98

STATE OF ALABAMA NON-ASTM RECORDS:

AST: AST Sites List
Source: Department of Environmental Management
Telephone: 334-271-7926
Registered Aboveground Storage Tanks.

Database Release Frequency: Quarterly
Date of Last EDR Contact: 05/11/98
Date of Next Scheduled EDR Contact: 08/03/98

Historical and Other Database(s)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

DELISTED NPL: NPL Deletions
Source: EPA
Telephone: 703-603-8769
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/25/97
Date Made Active at EDR: 11/28/97
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 09/26/97
Elapsed ASTM days: 63
Date of Last EDR Contact: 02/06/98

NFRAP: No Further Remedial Action Planned
Source: EPA/NTIS
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 12/31/97
Date Made Active at EDR: 04/13/98
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 02/17/98
Elapsed ASTM days: 55
Date of Last EDR Contact: 05/22/98

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-260-2805
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-260-2805
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SWDIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

Area Radon Information: The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1996 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in March 1997 from the U.S. Fish and Wildlife Service.

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Water Dams: National Inventory of Dams
Source: Federal Emergency Management Agency
Telephone: 202-646-2801
National computer database of more than 74,000 dams maintained by the Federal Emergency Management Agency.

User Provided Information

LaBella
Powered by partnership

PHASE I ESA USER/CLIENT PROVIDED INFORMATION QUESTIONNAIRE

The Phase I Environmental Site Assessment that LaBella Associates, D.P.C. (LaBella) was engaged to perform is being conducted pursuant to current industry standards established by the American Society for Testing and Materials (ASTM). The particular standard utilized is E 1527-13 Standard Practice for Conducting Environmental Site Assessments: *Phase I Environmental Site Assessment Process*. The purpose of this standard practice is:

> *"to define good commercial and customary practice... for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products."*

This standardized process allows our client, as the "User" of the report, to satisfy one of the requirements in qualifying for specified land owner and purchaser liability defenses related to environmental issues. That is, the "*all appropriate inquiry*" (AAI) clause as defined at *42 U.S.C. §9601(35)(B)*. In order to qualify, the User of the assessment must provide to the environmental professional conducting the assessment the following information, if available. *Failure to do so could result in a determination that "all appropriate inquiry" is not complete.*

1. ***Are you aware of any environmental cleanup liens that are filed or recorded against the subject property (40 CFR 312.25)***

No.

2. ***Are you aware of any activity and land use limitations that are in place on the subject property or that have been filed or recorded in a registry (40 CFR 312.26)***

No.

3. ***Specialized knowledge or experience of the person seeking to qualify for the land owner liability protection (LLP) (40 CFR 312.28)*** *[e.g. Do you have specialized knowledge of, or experience with, the chemicals, if any, used by the occupants of this property?]*

No.

4. ***Are you aware of any reduction in fair market value of the purchase price of the subject property, if acquiring, due to known or suspected environmental impact (40 CFR 312.29)***

No.

5. ***Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30) concerning the following:***

(a) *Do you know the past uses of the property?*

General cargo operations.

6. ***The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation? (40 CFR 312.31)*** *[e.g. Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the site?]*

1.0 INTRODUCTION

LaBella Associates, D.P.C. (LaBella) appreciates the opportunity of providing this report summarizing the findings of the Limited Phase II Environmental Site Assessment (ESA) conducted on the property located at 150 Viaduct Road in Chickasaw, Mobile County, Alabama (Site). The location of the Site is provided in Figure 1.

1.1 PURPOSE

The purpose of this assessment was to investigate recognized environmental conditions (RECs) that were previously identified in a Phase I ESA conducted by LaBella in a report dated March 21, 2024.

1.2 SITE HISTORY AND DESCRIPTION

According to historical documentation, the shipyard was established around 1917. In 1940, the property was purchased by Gulf Shipbuilding Corporation. During WWII, the shipyard was contracted by the War Department to assist in the war efforts to construct and repair naval vessels. Based on the review of historical aerial photographs and documentation, it was identified that Gulf Shipbuilding operated a 200' x 300' waste oil pit onsite to dispose of waste oil, sludges, and possibly other hazardous chemicals generated during the shipbuilding and repair process. The waste oil pit is known to have been in operation from 1940 to the 1970s. In 1974, an aerial photograph of the site shows the development of a new warehouse on the site and the footprint of the waste oil pit appears covered with dirt. Gulf Shipbuilding Corporation sold the property to the Morgan Stanley and Central States Southeast and Southwest Pension Fund (Teamsters Union). It is unknown when this transaction occurred, but it is believed to have been in the early 1970s. During the 1980s, the site was investigated by the Department of the Army under the Defense Environmental Restoration Account (DERA) program for the formerly used War Department sites (now known as the DOD). The investigation indicated that the site was never owned or leased by the DOD and therefore the site did not qualify for a restoration project under the DERA program. Between 1992 and 1997, based on aerial photographs, an additional warehouse was constructed on the northern portion of the site. The site remained relatively unchanged until sometime between 1997 and 2006, when the empty lot across the street began to be utilized as a staging area and a warehouse was built over the former waste oil pit.

In 1995, the Alabama Power Company (APCO) subcontracted with Jordan Pile Driving Company to construct the transmission tower seen on the site today. During the construction process, while "jeting a hole", a large amount of a dark black substance was sprayed over an area of around 1,000-square feet. APCO cleaned up this spill and collected approximately 210-cubic yards of contaminated

materials in seven roll-off containers. APCO contacted ADEM during this course of the events and an investigation by ADEM's UST Corrective Action Unit was conducted. Based on the ADEM report, APCO collected samples from two of the roll-off containers for analysis. Samples collected showed levels of total petroleum hydrocarbons (TPH) and total PCBs contamination of 320,000 and 45 parts per million (ppm), respectively. Review of the ADEM report indicates that the UST Branch did not have the authority to manage this site and referred it to the Hydrogeologic Unit for review. No additional action was taken by the ADEM.

2.0 SOIL SAMPLING ACTIVITIES

On July 29, 2024 LaBella mobilized to the Site to conduct a Limited Phase II ESA using direct push technology (DPT) drilling methods to advance 16 soil borings (denoted as SB-1 through SB-16) for the purpose of collecting subsurface soil samples. SB-1, SB-2, SB-5, SB-8, SB-10, SB-13, SB-14, SB-15, and SB-16 were converted to flush-mounted Type-II monitoring wells and advanced to the total depths listed in Table 2.0 below. Prior to soil boring installation, all locations were scanned using ground penetrating radar (GPR) to identify the location of underground utilities. Boring logs and monitoring well construction summaries are provided as Appendix A. A Soil Boring and Monitoring Well Location Map is provided as Figure 2.

Table 2.0- Soil Boring Details

Soil Boring ID/Monitoring Well ID	Depth of Boring	Sample Depth (ft-bgs)		Location
SB-1/MW-1	16	1-4	4-7	Near former AST area
SB-2/MW-2	16	1-6	--	Near main gate, west of former waste oil pit
SB-3	12	--	6-8	West of former waste oil pit
SB-4	16	3-6	--	West side of former waste oil pit
SB-5/MW-3	16	2-4	4-7	Center of former waste oil pit
SB-6	7	3-5	--	South side of former waste oil pit, near Office Building
SB-7	12	2-3	--	East side of former waste oil pit
SB-8/MW-4	11.5	--	--	SE corner of former waste oil pit, near Office Building
SB-9	12	--	5-7	SE corner of former waste oil pit, near Office Building
SB-10/MW-5	16	2-4	4-5.5	SE corner of Site
SB-11	12	4-6	--	North side of former waste oil pit
SB-12	12	3-5.5	--	North of former waste oil pit
SB-13/MW-6	16	2-4	5-7	East-central portion of the Site
SB-14/MW-7	16	1-3	3-6	East of the former waste oil pit
SB-15/MW-8	16	1-4	--	Northern corner of Site
SB-16/MW-9	16	0-2	2-4	West of Site, across Viaduct Road

ft-bgs – feet below ground surface
-- no sample collected

2.1 SOIL CHARACTERISTICS AND OBSERVATIONS

During soil boring activities, a licensed Professional Geologist logged the soil characteristics. Boring logs are included as Appendix A.

With exception of SB-14 and SB-16, which were advanced in a gravely and grassy areas, the borings were advanced in areas of the Site capped with concrete that ranged from approximately 6 inches to 12 inches thick. Soils in the top five feet below ground surface (ft-bgs) displayed a moderate degree of variability but were often stained black and had noticeable petroleum odors. The soils in the

approximately five to ten ft-bgs horizon displayed a moderate degree of variability but typically consisted of a grey, well-sorted, sand and often had noticeable petroleum odors. A soft, moderately dense, dark brown, clay layer was consistently observed at approximately 10-11 ft-bgs in the soil borings.

Significant oil staining was observed in soil borings SB-2 through SB-14. Free product was observed in soil borings SB-4, SB-5, SB-6, SB-7, SB-8, SB-9, and SB-11. The eastern extent of the free product was not defined directly to the east of soil boring SB-9, which containing free product; however, free product was not observed in SB-10 and SB-14, which were also located to the east of the former waste oil pit area. A strong sulfur odor was observed in the soil and water in SB-16.

2.2 Soil Sampling & Analysis

Soil samples collected during this investigation were placed in laboratory provided containers and maintained at 4° Celsius and delivered under proper chain of custody to a qualified laboratory for analysis. Samples collected from soil borings SB-1 through SB-16 were analyzed for volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), and polycyclic aromatic hydrocarbons (PAHs). Additionally, the samples collected from the nine soil borings that were converted to monitoring wells were analyzed for Resource Conservation & Recovery Act (RCRA)-8 metals. Except in instances where insufficient volumes of material were present, a single soil sample was collected from the soil boring not converted to monitoring wells and two soil samples were collected from soil borings that were converted to monitoring wells.

The analytical methods utilized during this assessment for soil included the following:

- VOCs - EPA Method 8260B
- PAHs - EPA Method 8270D-SIM
- PCBs- EPA Method 8082
- Metals – EPA Methods 6010D and 7471A

2.2.1 Soil Boring Sampling

Soil samples were collected from each of the 16 soil borings (SB-1 through SB-16) using a DPT rig to advance four-foot-long sample barrels lined with four-foot-long acetate sleeves to total depths as indicated in Table 2.0. Soil samples were collected at the approximate intervals as detailed in Table 2.0. The lithology of each sample interval was recorded, and the soils were screened for organic vapors using a photoionization detector (PID).

2.3 SOIL ANALYTICAL RESULTS

The analytical results of the soil samples collected from the soil borings are provided in the following sections. Table 1 in the Tables Section provides a summary of the detected constituents within soil. The soil laboratory analytical report is provided in Appendix B. Figure 3 illustrates the Constituents of Concern (COCs) Above EPA Industrial Regional Screening Levels (RSLs) in Soil.

2.3.1 Soil Boring Sample Analytical Results

It is LaBella's understanding that the current and likely future use of the Site is commercial/industrial use. As such, LaBella compared the detected concentrations of constituents to EPA Industrial Regional Screening Levels (RSLs) to determine which constituents exceed EPA RSLs. Additional constituents may exceed EPA Residential RSLs.

VOCs

Laboratory analytical results for the 21 soil samples submitted to the laboratory from each of the soil borings SB-1 through SB-16 indicate that a total of 20 VOCs were detected. However, no VOCs were detected at or above EPA Industrial RSLs in any of the soil samples.

PAHs

Laboratory analytical results for the 21 soil samples submitted to the laboratory from each of the soil borings SB-1 through SB-16 indicate that one PAH was detected at concentrations exceeding its corresponding EPA Industrial RSL in six of the soil borings. Soil samples collected from SB-1, SB-2, SB-3, SB-4, SB-5, and SB-11 contained concentrations of 1-methylnaphthalene that exceeded its EPA Industrial RSL of 0.077 ppm, with concentrations ranging from 0.134 ppm to 8.37 ppm. No other Industrial RSL exceedances were identified in the soil samples collected from the 16 borings.

PCBs

No PCBs were detected in any of the 21 soil samples submitted for analysis.

RCRA-8 Metals

RCRA-8 metals analysis was conducted on the samples from the nine soil borings that were converted to monitoring wells. Laboratory analytical results for the 14 soil samples submitted to the laboratory from each of the soil borings SB-1, SB-2, SB-5, SB-8, SB-10, SB-13, SB-14, SB-15, and SB-16 indicate that metals including arsenic, barium, cadmium, total chromium, lead, and mercury were detected in multiple samples submitted for analysis.

Arsenic exceeded its Industrial RSL of 3.0 ppm in some of the samples collected from soil borings SB-1, SB-10, and SB-14, with 3.91 ppm being the highest detected concentration. Although arsenic slightly exceeded EPA screening levels, arsenic is naturally occurring and is commonly found at concentrations above EPA Industrial RSLs. According to *Elements in North American Soils*, James Dragun, Ph.D. and Khaled Chekiri, Ph.D., arsenic is naturally occurring in soils in Alabama up to 11 mg/kg with a mean concentration of 4.7 mg/kg. All of the detected arsenic concentrations from the Site were less than the mean concentration of arsenic for naturally occurring arsenic in Alabama. As such, LaBella is of the opinion that the arsenic present at the Site is not likely the result of on-site contamination and should not be considered a COC for the Site and is not further discussed as a COC for the Site. No other metals were detected at concentrations exceeding EPA Industrial RSLs.

3.0 GROUNDWATER SAMPLING ACTIVITIES

Following the soil boring installation activities, soil borings SB-1, SB-2, SB-5, SB-8, SB-10, SB-13, SB-14, SB-15, and SB-16 were converted to Type-II groundwater monitoring wells for the purpose of collecting groundwater samples and measuring free product. The monitoring wells were constructed using 2-inch inside diameter (ID) PVC riser and a 10-foot length of 0.01-inch slotted screen and were finished with flush-mount covers. Monitoring well construction descriptions are included on the soil boring logs found in Appendix A. Groundwater was encountered in the monitoring wells at depths ranging from approximately 4.02 feet below ground surface (ft-bgs) in MW-9 to 6.3 ft-bgs in MW-7. Following completion of the monitoring wells, and prior to groundwater sampling, each monitoring well was developed by purging between three and five well volumes utilizing a submersible pump.

It should be noted that during the sampling event conducted on August 2nd, 2024, free product was observed in monitoring wells MW-3 and MW-4 with thickness of approximately 2.0 inches and 1.0 inch, respectively. On August 21, 2024, free product was observed in monitoring wells MW-3 and MW-4 with thickness of approximately 1.04 ft and 0.1 inch, respectively.

On August 28th, 2024, a Site wide groundwater and free product level measurement event was completed. Free product was detected in monitoring well MW-3 with a thickness of approximately 3.5 inches. Measurable free product was not detected in any other monitoring well. Based on the potentiometric surface elevations collected from monitoring wells MW-2 and MW-7 groundwater flow is generally to the east toward the river with a hydraulic gradient of approximately 0.0095 ft/ft. The measurement data for the August 28th, 2024 event is presented in Table 3.0. A Potentiometric Surface map is provided as Figure 4.

TABLE 3.0 MONITORING WELL CONSTRUCTION SUMMARY AND GROUNDWATER DATA – AUGUST 28, 2024

Monitoring Well ID	Casing Diameter & Material	Top of Casing Elevation (ft-amsl)	Measured Total Depth (ft-btoc)	Screened Interval (ft-btoc)	Measured Depth to Water (ft-btoc)*	Measured Depth to Product (ft-btoc)	Potentiometric Surface Elevation (ft-amsl)
MW-1	2-in PVC	9.24	15.3	5.3 - 15.3	4.83	--	4.41
MW-2	2-in PVC	9.42	15.3	5.3 - 15.3	4.30	--	5.12
MW-3	2-in PVC	8.22	15.1	5.1 – 15.1	6.20	5.85	2.32
MW-4	2-in PVC	8.30	14.9	4.9 – 14.9	6.30	--	2.00
MW-5	2-in PVC	8.86	13.9	3.9 – 13.9	6.05	--	2.81
MW-6	2-in PVC	8.52	15.6	5.6 – 15.6	5.90	--	2.62
MW-7	2-in PVC	7.74	13.7	3.7 – 13.7	6.60	--	1.14
MW-8	2-in PVC	8.20	13.3	3.3 – 13.3	5.25	--	2.95
MW-9	2-in PVC	5.56	13.7	3.7 – 13.7	5.30	--	0.26

*Depth to water measurements collected on 8/28/2024
– Not detected
Ft-amsl – Feet above mean sea level
Ft-btoc – Feet below top of casing

3.1 GROUNDWATER SAMPLING & ANALYSIS

The groundwater samples were placed in laboratory provided containers, wrapped in bubble wrap and plastic bags, and stored in coolers with ice to achieve and maintain a sample temperature of approximately 4° Celsius. The samples were shipped via overnight courier to the laboratory for analysis of VOCs, PAHs, PCBs, and dissolved metals. The analytical methods utilized during this assessment for groundwater included the following:

- VOCs - EPA Method 8260B
- PAHs - EPA Method 8270D-SIM
- PCBs- EPA Method 8082
- Dissolved Metals – EPA Methods 6010D and 7471A

3.2 GROUNDWATER ANALYTICAL RESULTS

A discussion of the detected constituents identified in groundwater is provided below along with a comparison of the detected constituents to EPA RSLs which include the EPA Maximum Contaminant Level (MCL) or Tapwater RSL, if no MCL is available. A summary of the constituents detected in groundwater is provided in Table 2 in the Tables Section. The groundwater laboratory analytical report is provided in Appendix C. Figure 5 illustrates the COCs Above EPA RSLs in Groundwater.

VOCs

Laboratory analytical results for the nine groundwater samples submitted for analysis indicated that a total of 21 VOCs were detected in the groundwater samples submitted for analysis. VOCs including

1,2-dibromo-3-chloropropane, 1,2-dichloroethane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, and 1,2,3-trimethylbenzene were detected at concentrations that exceeded their corresponding EPA RSLs. One or more VOCs were detected at concentrations exceeding the EPA RSL in one or more samples collected from MW-2, MW-3, MW-4 and MW-8. No other VOCs were detected at concentrations that exceeded their EPA RSL.

PAHs

Laboratory analytical results for the nine groundwater samples submitted for analysis indicated that a total of 10 PAHs were detected in the groundwater samples submitted for analysis. 1-methylnaphthalene was exceeded in each of the nine samples submitted for laboratory analysis. Additionally, 2-methylnaphthalene and exceeded the EPA RSL in samples submitted from monitoring wells MW-3 and MW-4, and naphthalene exceeded the EPA RSL in samples submitted from monitoring wells MW-2, MW-3, and MW-4. No other detections exceeded their corresponding EPA RSLs in the groundwater samples.

PCBs

No PCBs were detected in any of the groundwater samples submitted for analysis.

RCRA-8 Metals

Laboratory analytical results for the nine groundwater samples submitted for analysis indicated that one or more metals including dissolved barium, dissolved chromium, and dissolved lead were detected in one or more groundwater samples. The detected metals did not exceed the applicable EPA RSL.

3.3 Free Product Fingerprint Analysis

In an effort to determine the type of petroleum product present at the Site, a TPH fingerprint analysis was conducted on free product collected from three monitoring wells MW-2, MW-3, and MW-4 and the oily product that was present within soil sample SB-11 (4-6). Each of the samples was analyzed in accordance with EPA Method 8015. Based on the results of the fingerprint analysis, the product present in each of the samples submitted for laboratory analysis was consistent with hydraulic fluid. No other types of petroleum products were indicated such as gasoline, diesel fuel, jet fuel, motor oil, etc. The fingerprint analysis identified the presence of petroleum carbon chains in the ranges identified in the following Table 3.3, which are consistent with hydraulic fluid. The laboratory analytical report for the free product analysis for SB-11 is provided in Appendix B. The laboratory analytical report for the free product analysis of the samples collected from the monitoring wells is provided in Appendix D.

TABLE 3.3 FINGERPRINT ANALYSIS SUMMARY

Sample ID	Diesel Range Organics Carbon Chain Range C10-C-28	Oil Range Organics Carbon Chain Range C28-C-40	Petroleum Product Type
MW-2	30.1 mg/l	19.7 mg/l	Hydraulic Fluid
MW-3	53.3 mg/l	25.4 mg/l	Hydraulic Fluid
MW-4	40.0 mg/l	27.7 mg/l	Hydraulic Fluid
SB-11 4-6 Oil Layer	3,840 mg/kg	924 mg/kg	Hydraulic Fluid

Mg/L – milligrams per liter

Mg/kg - milligrams per kilogram

4.0 SUB-SLAB VAPOR SURVEY

In order to address the RECs associated with the Site beneath the onsite buildings, a sub-slab vapor survey was completed by Total Vapor Solutions in July 2024. For vapor survey result discussion purposes, the southernmost structure on the Site will be referred to as "Office Building", the central structure will be referred to as "Main Building", and the northernmost structure will be referred to as "North Building".

4.1 Sub-Slab Survey Field Investigation Activities

On July 29, 2024, LaBella's subcontractor Total Vapor Solutions conducted an assessment of vapor beneath the building foundations located at the Site. The sub-slab vapor assessment included the collection of eighteen total shallow sub-slab vapor samples; eight from beneath the Office Building, six from beneath the Main Building, and four from beneath the North Building. The sub-slab vapor sampling locations are shown in Figure 6 in the Figures Section and in Figure 1 within Appendix E.

4.2 Sub-Slab Sampling and Analysis

The eighteen sub-slab implants were installed using a handheld rotary drill. A ¾ inch diameter drill bit was advanced to a depth of approximately 2-inches below the bottom of the concrete and an airstone implant installed. Sand was placed around the airstone and hydrated bentonite placed in the borehole to ensure proper isolation of the sub-slab air from the air within the breathing zone. Prior to sample collection, the shallow sub-slab points were allowed to equilibrate a minimum of 60 minutes prior to sampling. A helium leak test and a secondary leak test (shut-in test) were performed on the summa canisters and the associated sampling apparatus. All samples were collected in batch-certified summa canisters (450 ml) equipped with 200 milliliters/minute flow controllers. The samples were delivered to the laboratory for analysis of VOCs by EPA Method TO-15.

4.3 Sub-Slab Analytical Results

A review of the analytical results for each of the sub-slab samples submitted for analysis indicates that a vapor intrusion risk is present at each of the three structures. A copy of the analytical report is provided in Appendix III of the Sub-Slab Vapor Survey Report within Appendix D.

4.3.1 Office Building

Of the eight sub-slab samples collected from the Office Building, four of the samples (SS4 through SS7) had carcinogenic risk levels that exceeded applicable screening levels. 1,3-butadiene was detected at a concentration that exceeded its corresponding screening level in sample SS-4.

4.3.2 Main Building

Of the six sub-slab samples collected from the Main Building, three of the samples (SS10, SS11, and SS14) had carcinogenic risk levels that exceeded applicable screening levels. Benzene, 1,4-dichlorobenzene, and bromodichloromethane were detected at concentrations that exceeded their corresponding screening levels in one or more of the samples collected from the Main Building.

4.3.3 North Building

Of the four sub-slab samples collected from the North Building, one sample (SS18) had carcinogenic risk levels that exceeded applicable screening levels. 1,1,2,2-tetrachlroethane was detected at concentrations that exceeded its corresponding screening levels in sample SS-18.

4.4 Risk Analysis

The results of the sub-slab sample analysis were evaluated using the U.S. EPA Vapor Intrusion Screening Level (VISL) Calculator and screened against the Alabama-specific cumulative risk parameters of 10^{-6} for carcinogenic risk (hazard index) and 0.1 for the non-carcinogenic risk (hazard quotient) based on commercial exposure. Based on the comparison, multiple samples slightly exceeded the carcinogenic cumulative risk. Tables 4.4.1, 4.4.2, and 4.4.3 on the following pages summarizes the results of the VISL calculator output. The VISL calculations are provided in Appendix IV of the Sub-Slab Vapor Survey Report within Appendix D.

Initial screening values are for determining if a potential threat may be posed to indoor inhalation within a building structure. Initial screening values are not cleanup levels or remediation goals, rather remediation goals/clean-up levels are determined on a site-specific basis, after site characterization has been completed and a conceptual site model has been developed.

4.4.1 Office Building

Based on the comparison for the eight sub-slab samples collected from the Office Building, four of the samples (SS-4 through SS-7) had carcinogenic risk levels that slightly exceeded applicable screening levels.

TABLE 4.4.1 – OFFICE BUILDING – SUMMARY OF CUMULATIVE RISK COMPARISON

Sample ID	Carcinogenic Risk ($1.0E\text{-}10^{-6}$)	Noncarcinogenic Risk Hazard Quotient (0.1)
Office SS-1	4.57E-07	1.87E-02
Office SS-2	4.00E-07	1.69E-02
Office SS-3	6.58E-10	1.33E-03
Office SS-4	1.89E-06	7.75E-02
Office SS-5	1.40E-06	4.79E-02
Office SS-6	1.04E-06	7.48E-02
Office SS-7	1.22E-06	6.27E-02
Office SS-8	2.88E-07	1.70E-02

Notes:
"Red" – Concentration exceeds AL-specific Initial Screening Level for Carcinogenic and Non-carcinogenic Cumulative Risk

The slight exceedances within samples SS-4 through SS-7 were due to the concentrations of benzene, benzyl chloride, 1,1-dichrloroethane, 1,4-dioxane, 1,3-butadiene, ethylbenzene, methyl tert-butyl ether (MTBE), methylene chloride, naphthalene, and tetrachloroethylene. Samples SS-4 and SS-6 were collected on the northern side of the Office Building, nearest to the former waste oil pit. Samples SS-5 and SS-7 were collected on the southern and eastern side of the Office Building, further away from the former waste oil pit.

It is important to note that, although four of the eight sub-slab vapor samples slightly exceed the Alabama recommended Carcinogenic Risk of 1.0×10^{-6}, the initial screening levels for the Carcinogenic Risk are relatively low compared to what many other states (such as Georgia) use for determining risk, which quantify risk using 1.0×10^{-5} and 1.0, for Target Carcinogenic Risk and Target Non-Carcinogenic Risk, respectively. If the higher Target Carcinogenic Risk initial screening value were to be used, then it would not result in an exceedance for the Office Building.

LaBella is of the opinion that if site specific data were used to calculate exposure risk, such as depth to groundwater, site specific attenuation factor, site soil characteristics, etc., and/or a different model (such as the Johnson and Ettinger model) that it would be unlikely that the detected concentrations within the sub-slab vapor in the Office Building would pose an actual threat to human health and would not warrant remediation.

4.4.2 Main Building

Based on the comparison for the six sub-slab samples collected from the Main Building, three of the samples (SS-10, SS-11, and SS-14) had carcinogenic risk levels that exceeded applicable screening levels.

TABLE 4.4.2– MAIN BUILDING - SUMMARY OF CUMULATIVE RISK COMPARISON

Sample ID	Carcinogenic Risk (1.0E-10^{-6})	Noncarcinogenic Risk Hazard Quotient (0.1)
Main SS-9	7.04E-07	3.34E-02
Main SS-10	1.35E-05	3.82E-01
Main SS-11	3.71E-06	4.62E-03
Main SS-12	8.52E-08	3.26E-02
Main SS-13	7.06E-08	5.82E-03
Main SS-14	1.65E-05	2.26E-01

Notes:
"Red" – Concentration exceeds AL-specific Initial Screening Level for Carcinogenic and Non-carcinogenic Cumulative Risk

The exceedances within samples SS-10, SS-11, and SS-14 was due to the concentrations of benzene, bromodichloromethane, 1,4-dichlorobenzene. Sample SS-10 was collected on the northeast side of the Main Building. Sample SS-11 was collected on the north central side of the Main Building. Sample SS-14 was collected on the southeast side of the Main Building.

LaBella is of the opinion that if site specific data were used to calculate exposure risk, such as depth to groundwater, site specific attenuation factor, site soil characteristics, etc., that it would be unlikely that the detected concentrations within the sub-slab vapor sample SS-11 would pose an actual threat to human health and would not warrant remediation. However, even if site specific data were taken into account or a different model (such as the Johnson and Ettinger model) were used to calculate the indoor air concentrations, the detections in samples SS-10 and SS-14 would likely still pose a threat to human health and therefore still warrant remediation.

4.4.3 North Building

Based on the comparison for the four sub-slab samples collected from the North Building, one sample (SS-18) had carcinogenic risk levels that exceeded applicable screening levels.

TABLE 4.4.3 – NORTH BUILDING - SUMMARY OF CUMULATIVE RISK COMPARISON

Sample ID	Carcinogenic Risk (1.0E-10^{-6})	Noncarcinogenic Risk Hazard Quotient (0.1)
North SS-15	--	6.27E-04
North SS-16	1.31E-07	3.32E-02
North SS-17	8.84E-07	5.75E-02
North SS-18	1.54E-06	--

Notes:
"Red" – Concentration exceeds AL-specific Initial Screening Level for Carcinogenic and Non-carcinogenic Cumulative Risk

The slight exceedance within sample SS-18 was due to the concentration of 1,1,2,2-tetrachloroethane. Sample SS-18 was collected on the southwest side of the North Building. It is important to note that, although one of the ten sub-slab vapor samples slightly exceed the Alabama recommended Carcinogenic Risk of 1.0×10^{-6}, the initial screening levels for the Carcinogenic Risk are relatively low compared to what many other states (such as Georgia) use for determining risk, which quantify risk using 1.0×10^{-5} and 1.0, for Target Carcinogenic Risk and Target Non-Carcinogenic Risk, respectively. If the higher Target Carcinogenic Risk initial screening value were to be used, then it would not result in an exceedance for the Site.

LaBella is of the opinion that if site specific data were used to calculate exposure risk, such as depth to groundwater, site specific attenuation factor, site soil characteristics, etc., and/or a different model (such as the Johnson and Ettinger model) that it would be unlikely that the detected concentrations of 1,1,2,2-tetrachloroethane, or other constituents in sub-slab vapor sample SS-18, pose an actual threat to human health and would not warrant remediation. It is also worth noting that the three other samples collected from beneath the North Building did not indicate any exceedances.

5.0 DECONTAMINATION AND SAMPLE AND WASTE MANAGEMENT

All waste generated during the July through August 2024 assessment activities was containerized for disposal. Water collected from monitoring well development, decontamination, and low-flow sampling activities was placed in a 55-gallon container for subsequent disposal at an approved facility. Soil cuttings and solid debris generated during the activities was placed in 55-gallon containers. Waste was characterized and is currently pending disposal under profile No. 167242 and certification numbers: SW-083126-0083 and SW-083126-0084. A copy of the ADEM Waste Certifications and analytical reports are provided in Appendix F.

6.0 CONCLUSIONS

A Limited Phase II ESA was performed at the Chickasaw Marine Termimal Property in July and August 2024, by LaBella to determine if the historical use of the Site had adversely impacted the Site. Based on the results of this assessment, LaBella has concluded the following:

Soil

- A total of sixteen soil borings (SB-1 through SB-16) were advanced on-site and were advanced to depths ranging from approximately 7 ft-bgs to 16 ft-bgs. All of the soil samples collected from the soil borings were analyzed for VOCs, PAHs, and PCBs. Additionally, soil samples collected from the nine soil borings converted to monitoring wells were analyzed for RCRA-8 metals.
- Significant oil staining was observed in soil borings SB-2 through SB-14. Oil/free product was observed in soil borings SB-4, SB-5, SB-6, SB-7, SB-8, SB-9, and SB-11. As oil/free product was observed in soil boring SB-9 the full extent of the oil/free product is not defined to the east of SB-9.
- A comparison of the detected constituents within the soil samples analyzed for VOCs and PCBs indicated that no VOCs or PCBs were detected above EPA Industrial RSLs.
- A comparison of the detected constituents within the soil samples analyzed for PAHs indicated that 1-methylnaphthalene was detected above its EPA Industrial RSL in soil samples collected from SB-1, SB-2, SB-3, SB-4, SB-5, and SB-11.
- A comparison of the detected constituents within the soil samples analyzed for metals indicates that arsenic was detected at concentrations above its EPA Industrial RSL of 3.0 mg/kg in samples collected from soil borings SB-1, SB-10, and SB-14. No other metals were detected at concentrations exceeding EPA Industrial RSLs. It should be noted that arsenic is naturally occurring and is commonly found at concentrations above EPA Industrial RSLs. According to *Elements in North American Soils*, James Dragun, Ph.D. and Khaled Chekiri, Ph.D., arsenic is naturally occurring in soils in Alabama up to 11 mg/kg with a mean concentration of 4.7 mg/kg. All of the detected arsenic concentrations from the Site were less than the mean concentration of arsenic for naturally occurring arsenic in Alabama. As such, LaBella is of the opinion that the arsenic present at the Site is not likely the result of on-site contamination.

Groundwater

- Nine Type-II monitoring wells were installed on-site to depths of approximately 13 ft-bgs to 15.5 ft-bgs. Groundwater was encountered ranging from approximately 4.02 ft-bgs to 6.3 ft-bgs on August 2nd, 2024. Groundwater samples were collected from each of the nine monitoring wells and analyzed for VOCs, PAHs, PCBs, and dissolved RCRA-8 metals.
- Three groundwater measurement events were completed at the Site and free product was detected in monitoring wells MW-3 and MW-4 with maximum thicknesses of approximately 1.04 ft and 1.0 inch, respectively. A light sheen was observed in MW-2.
- A Site wide groundwater measuring event was completed at the Site on August 28th, 2024. Based on the potentiometric surface elevations collected from monitoring wells MW-2 and MW-7, groundwater flow is generally to the east toward the river with a hydraulic gradient of approximately 0.0095 ft/ft.

- TPH Fingerprint analysis was conducted on the samples collected from the three wells in which free product or a sheen was observed. Based on the results of the fingerprint analysis, the product is consistent with hydraulic fluid.
- Results of the laboratory analysis for the groundwater samples analyzed indicated five VOCs including 1,2-dibromo-3-chloropropane, 1,2-dichloroethane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, and 1,2,3-trimethylbenzene were detected at concentrations exceeding their corresponding EPA RSL. One or more VOC exceedances was indicated in samples collected from monitoring wells MW-2, MW-3, MW-4, and MW-8.
- Results of the laboratory analysis for the groundwater samples analyzed for PAHs indicates 1-methylnaphthalene was exceeded in each of the nine samples submitted for laboratory analysis. Additionally, 2-methylnaphthalene and exceeded the EPA RSL in samples submitted from monitoring wells MW-3 and MW-4, and naphthalene exceeded the EPA RSL in samples submitted from monitoring wells MW-2, MW-3, and MW-4.
- No PCBs were detected in any of the groundwater samples submitted for analysis, and no detected metals exceeded their corresponding EPA RSLs.

Sub-Slab Vapor Survey

- The sub-slab vapor assessment included the collection of eighteen total shallow sub-slab vapor samples; eight from beneath the Office Building, six from beneath the Main Building, and four from beneath the North Building.
    - **Office Building**: Based on the comparison for the eight sub-slab samples collected from the Office Building, four of the samples (SS-4 through SS-7) had carcinogenic risk levels that slightly exceeded applicable screening levels. LaBella is of the opinion that if site specific data were used to calculate exposure risk, such as depth to groundwater, site specific attenuation factor, site soil characteristics, etc., and/or a different model (such as the Johnson and Ettinger model) that it would be unlikely that the detected concentrations within the sub-slab vapor in the Office Building would pose an actual threat to human health and would not warrant remediation.
    - **Main Building**: Based on the comparison for the six sub-slab samples collected from the Main Building, three of the samples (SS-10, SS-11, and SS-14) had carcinogenic risk levels that exceeded applicable screening levels. LaBella is of the opinion that even if site specific data were taken into account, or a different model were used, the detections in samples SS-10 and SS-14 would likely still pose a threat to human health and therefore still warrant remediation.
    - **North Building**: Based on the comparison for the four sub-slab samples collected from the North Building, one sample (SS-18) had carcinogenic risk levels that slightly exceeded applicable screening levels. LaBella is of the opinion that if site specific data were used to calculate exposure risk, such as depth to groundwater, site specific attenuation factor, site soil characteristics, etc., and/or a different model (such as the Johnson and Ettinger model) that it would be unlikely that the detected concentrations in sub-slab vapor sample SS-18, pose an actual threat to human health and would not warrant remediation. It is also worth noting that the three other samples collected from beneath the North Building did not indicate any exceedances.

This completes the scope of work for the Limited Phase II activities.

Notes

Screening Levels - Environmental Protection AgencyMay 2024

	Detected Concentration
Red	Detected concentration exceed EPA Maximum Contaminant Level
Blue	Non-detected concentration exceed EPA Risk Based Soil Screening Level
Blue	Detected concentration exceed EPA Tapwater Screening Level
J	Estimated value
<	Concentration not detected above the laboratory minimum detection limit
na	No EPA screening level established

RE: Project: Zarzour Phase II
Pace Project No.: 20303765

Dear Melissa Montgomery:

Enclosed are the analytical results for sample(s) received by the laboratory on January 11, 2024. The results relate only to the samples included in this report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Baton Rouge
- Pace Analytical Services - New Orleans

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kyle A. Williams

QUALIFIERS

Project: Zarzour Phase II
Pace Project No.: 20303765

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

ANALYTE QUALIFIERS

H3	Sample was received or analysis requested beyond the recognized method holding time.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

LaBella Associates
Mr. Trey Helms
528 Mineral Trace
Hoover, AL, 35244

Ref: Analytical Testing
Lab Report Number: 24-214-0058
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. Trey Helms:
Waypoint Analytical, LLC. received sample(s) on 8/1/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

CASE NARRATIVE

High Temp/Pressure Extraction for PCB's Method 3546
Sample 85736 (SB3: 6-8)
QC Batch No: L765238/L765238
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Sample 85737 (SB4: 3-6)
QC Batch No: L765238/L765238
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Sample 85738 (SB5: 2-4)
QC Batch No: L765238/L765238
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Sample 85739 (SB5: 4-7)
QC Batch No: L765238/L765238
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Ultrasonic Extraction for 8270 Method 3550B
Sample 85737 (SB4: 3-6)
QC Batch No: L765019/L765019
This sample extract was unable to be concentrated to the default method final volume. The final volume adjustment due to viscous extracts may result in surrogate recoveries below the minimum detectable concentration.

Sample 85738 (SB5: 2-4)
QC Batch No: L765019/L765019
This sample extract was unable to be concentrated to the default method final volume. The final volume adjustment due to viscous extracts may result in surrogate recoveries below the minimum detectable concentration.

Sample 85739 (SB5: 4-7)
QC Batch No: L765019/L765019
This sample extract was unable to be concentrated to the default method final volume. The final volume adjustment due to viscous extracts may result in surrogate recoveries below the minimum detectable concentration.

Solids Total Mercury Analysis - CVAA Method 7471A
Sample 85754 (SB10: 2-4)
Analyte: Mercury
QC Batch No: L765126/L764915

The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Polychlorinated Biphenyls (PCB's) Method 8082A
Sample 85733 (SB1: 1-4)
QC Batch No: L765581
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85734 (SB1: 4-7)
QC Batch No: L765581
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85735 (SB2: 1-6)
QC Batch No: L765581
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85736 (SB3: 6-8)
QC Batch No: L765581
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85737 (SB4: 3-6)
QC Batch No: L765581
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85738 (SB5: 2-4)
QC Batch No: L765581
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85739 (SB5: 4-7)
QC Batch No: L765581
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85740 (SB6: 3-5)
QC Batch No: L765906
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85741 (SB7: 2-3)
QC Batch No: L765906
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85305 (JSY-E-SB-116)
QC Batch No: L765906/L765458
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85305 (JSY-E-SB-116)
Analyte: Aroclor 1254
QC Batch No: L765906/L765458
Analyte was detected in both the primary and confirmatory analyses, with a relative percent difference (RPD) of greater than 40% between the two results. These results are flagged Q and the lower of the two values is reported. Analytes with RPD values greater than 100% are reported as non-detect.

Semivolatile Organic Compounds - GC/MS (SIM) Method 8270D SIM
Sample 85733 (SB1: 1-4)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85734 (SB1: 4-7)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85735 (SB2: 1-6)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85736 (SB3: 6-8)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85737 (SB4: 3-6)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85738 (SB5: 2-4)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85739 (SB5: 4-7)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85739 (SB5: 4-7)
QC Batch No: L765604/L765019
Surrogate recovery(s) was flagged as outside QC limits due to high levels of target and/or non-target analytes.
Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 85740 (SB6: 3-5)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85741 (SB7: 2-3)
QC Batch No: L765604/L765019
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Ref: Analytical Testing
Lab Report Number: 24-214-0059
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. Trey Helms:
Waypoint Analytical, LLC. received sample(s) on 8/1/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

CASE NARRATIVE

Solids Total Mercury Analysis - CVAA Method 7471A
Sample 85754 (SB10: 2-4)
Analyte: Mercury
QC Batch No: L765126/L764915
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Polychlorinated Biphenyls (PCB's) Method 8082A
Sample 85742 (SB14: 1-3)
QC Batch No: L765906
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85305 (JSY-E-SB-116)
Analyte: Aroclor 1254
QC Batch No: L765906/L765458
Analyte was detected in both the primary and confirmatory analyses, with a relative percent difference (RPD) of greater than 40% between the two results. These results are flagged Q and the lower of the two values is reported. Analytes with RPD values greater than 100% are reported as non-detect.

Semivolatile Organic Compounds - GC/MS (SIM) Method 8270D SIM
Sample 85742 (SB14: 1-3)
QC Batch No: L765605/L765234
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Ref: Analytical Testing
Lab Report Number: 24-214-0080
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. Trey Helms:
Waypoint Analytical, LLC. received sample(s) on 8/1/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

Client: LaBella Associates
Project: Chickasaw Marine Terminal
Lab Report Number: 24-214-0080
Date: 8/8/2024

CASE NARRATIVE

High Temp/Pressure Extraction for PCB's Method 3546
Sample 85756 (SB11: 4-6)
QC Batch No: L765458/L765458
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Solids Total Mercury Analysis - CVAA Method 7471A
Sample 85754 (SB10: 2-4)
Analyte: Mercury
QC Batch No: L765126/L764915
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Sample 85305 (JSY-E-SB-116)
Analyte: Mercury
QC Batch No: L765126/L764918
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Polychlorinated Biphenyls (PCB's) Method 8082A
Sample 85754 (SB10: 2-4)
QC Batch No: L765906
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85756 (SB11: 4-6)
QC Batch No: L765906
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85305 (JSY-E-SB-116)
Analyte: Aroclor 1254
QC Batch No: L765906/L765458
Analyte was detected in both the primary and confirmatory analyses, with a relative percent difference (RPD) of greater than 40% between the two results. These results are flagged Q and the lower of the two values is reported. Analytes with RPD values greater than 100% are reported as non-detect.

Semivolatile Organic Compounds - GC/MS (SIM) Method 8270D SIM
Sample 85754 (SB10: 2-4)
QC Batch No: L765605/L765234
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 85756 (SB11: 4-6)
QC Batch No: L765605/L765234

2790 Whitten Road, Memphis, TN 38133
Main 901.213.2400 ⁰ Fax 901.213.2440
www.waypointanalytical.com

Surrogate recovery(s) was flagged as outside QC limits due to high levels of target and/or non-target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Ref: Analytical Testing
Lab Report Number: 24-219-0022
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. David Wall:
Waypoint Analytical, LLC. received sample(s) on 8/6/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

CASE NARRATIVE

Polychlorinated Biphenyls (PCB's) Method 8082A
Sample 95141 (MW-1)
QC Batch No: L766810
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 95137 (MW-8)
Analyte: Decachlorobiphenyl
QC Batch No: L766810/L766460
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 95139 (MW-7)
Analyte: Decachlorobiphenyl
QC Batch No: L766810/L766460
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 95140 (MW-5)
Analyte: Decachlorobiphenyl
QC Batch No: L766810/L766460
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 95141 (MW-1)
Analyte: Decachlorobiphenyl
QC Batch No: L766810/L766460
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Semivolatile Organic Compounds - GC/MS (SIM) Method 8270D SIM
Sample 95137 (MW-8)
QC Batch No: L766169/L765926
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

www.waypointanalytical.com

Sample 95138 (MW-6)
QC Batch No: L766169/L765926
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 95139 (MW-7)
QC Batch No: L766169/L765926
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 95140 (MW-5)
QC Batch No: L766169/L765926
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Ref: Analytical Testing
Lab Report Number: 24-235-0006
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. David Wall:
Waypoint Analytical, LLC. received sample(s) on 8/22/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

Client: LaBella Associates **CASE NARRATIVE**
Project: Chickasaw Marine Terminal
Lab Report Number: 24-235-0006
Date: 8/26/2024

Separatory Funnel Extraction- Polychlorinated Biphenyls (PCB's) Method 3510C
Sample 82502 (MW-2)
QC Batch No: L768947/L768947
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Sample 82503 (MW-3)
QC Batch No: L768947/L768947
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Sample 82504 (MW-4)
QC Batch No: L768947/L768947
The weight/volume extracted was reduced during the extraction procedure due to the nature of the sample. Reporting limits are factored for the sample size reduction.

Polychlorinated Biphenyls (PCB's) Method 8082A
Sample 82503 (MW-3)
QC Batch No: L769066
Surrogate recovery(s) was flagged as outside QC limits due to high levels of target and/or non-target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Semivolatile Organic Compounds - GC/MS (SIM) Method 8270D SIM
Sample 82502 (MW-2)
QC Batch No: L768863/L768691
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 82502 (MW-2)
QC Batch No: L768863/L768691
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 82503 (MW-3)
QC Batch No: L768863/L768691
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Sample 82504 (MW-4)
QC Batch No: L768863/L768691
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Ref: Analytical Testing
Lab Report Number: 24-219-0052
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. Trey Helms:
Waypoint Analytical, LLC. received sample(s) on 8/6/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

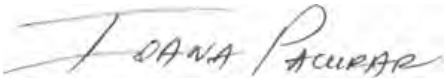
Job Notes

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Authorization



Generated
8/14/2024 11:44:34 AM

(770)457-8177

Definitions/Glossary

Client: Total Vapor Solutions
Project/Site: Chickasaw

Job ID: 705-3083-1
SDG: 07292024

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 705-3083-1 — Eurofins Atlanta

Job Narrative
705-3083-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/30/2024 2:38 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice.

Air - GC/MS VOA
Method TO15_PF: Internal standard (Chloronemzeme-d5) responses were outside of acceptance limits for the following samples: Office-SS6 (705-3083-6) and Office-SS7 (705-3083-7). The sample(s) shows evidence of matrix interference due to instrument malfunction.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Total Vapor Solutions
Project/Site: Chickasaw

Job ID: 705-3083-1
SDG: 07292024

Client Sample ID: Office-SS1 — Lab Sample ID: 705-3083-1

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: Waste Certification
INVESTIGATION DERIVED WASTE (DRILLING SOIL CUTTINGS)

The Alabama Department of Environmental Management has reviewed your waste certification received on 8/27/2024 and has assigned a Certification Number for this waste as shown below.

Waste Profile #: 167242
Certification #: SW-083126-0084
Expiration Date of Certification: 8/31/2026

Buchanan Lumber Mobile Inc
150 Viaduct Road
Chickasaw, AL

In your certification you requested one or more landfills be approved to receive your waste. Based on our review of the waste and the landfills requested, the waste is approved for disposal in the following landfills:

Axis Industrial Landfill-Lined cell 49-21

You should provide this approval letter to the landfill(s) listed above and contact the landfill to determine any special handling requirements for this waste prior to delivery to the landfill. According to ADEM regulations, the landfill may not receive this waste unless it has received a waste certification approval. For waste generated on a routine basis (not a one-time occurrence), another written certification for this waste stream should be submitted to ADEM prior to the expiration date listed above or at any time the process producing the waste changes. Each submittal should include a completed Solid Waste Profile Sheet, any supporting documentation including current analytical, and the appropriate fee. Current analytical consists of analysis performed within the past six months.

If at any time before the expiration date of this certification, new analysis of the waste is performed, the new results will supersede any prior analysis from the time the samples are taken. If the new analysis indicates the waste is still non-hazardous, the waste may continue to be disposed of at the landfill listed above until the expiration date of this certification. If the new analysis indicates the waste is hazardous, this certification is revoked. Each time new analysis is performed on the waste, copies of the analytical results should be provided to ADEM and the landfill until this certification expires. The generator should not dispose of the waste prior to the receipt and review of the sampling results. Furthermore, this approval letter does not exempt Buchanan Lumber Mobile Inc from complying with all applicable requirements of the ADEM Administrative Code. If you have any questions concerning this approval or the approval process, please contact Ms. Bailee Dykes at 334-279-3061.

Sincerely,

Sonja B Favors, Chief

Hoover, AL, 35244

Ref: Analytical Testing
Lab Report Number: 24-219-0051
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. David Wall:
Waypoint Analytical, LLC. received sample(s) on 8/6/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Ref: Analytical Testing
Lab Report Number: 24-228-0036
Client Project Description: Chickasaw Marine Terminal
Chickasaw, AL
Project #2243359

Dear Mr. Trey Helms:
Waypoint Analytical, LLC. received sample(s) on 8/15/2024 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

Sample Check-in Form

Date Received: 8/11/25 **Invoice #** 54463

Method of Delivery: hand **Client:** Bullock

1. Did any containers arrive broken?	YES	✓NO	
* If so, please state field ID with analysis of broken sample(s) _____			
2. Were cooler(s) sealed upon arrival?	✓YES	NO	NA
3. Were the samples received at the proper temperature (4°C +/- 2°C)?	✓YES	NO	NA
4. Did a chain of custody accompany the samples?	✓YES	NO	
* Was it properly filled out?	✓YES	NO	
5. Were correct containers used for the analysis requested?	✓YES	NO	
6. Were all containers properly preserved?	✓YES	NO	NA
7. Were all water samples received at the proper pH?	✓YES	NO	NA
8. If VOA vials were present, was there any head space?	YES	✓NO	NA
* If so, please state field ID of deficient sample(s): _____			
9. Were all containers properly labeled and match chain of custody?	✓YES	NO	
10. Did containers arrive within holding time of analysis?	✓YES	NO	
* If not, please state field ID and analysis of sample(s) out of holding time: _____			
11. Was client informed of any/all deficiencies in sample check-in?	YES	NO	✓NA
12. Were any samples rejected?	YES	✓NO	
* If so, please state field ID of rejected sample(s): _____			

Sample Custodian (signed): M. W.

Re: Voluntary Cleanup Plan Email
Former Chickasaw Marine Terminal
150 Viaduct Road
Mobile, AL, 36611

Dear Mr. Zarzour:

Per our conversation on September 9, 2025, the Alabama Department of Environmental Management (ADEM) is receptive to an alternative proposal for the Former Chickasaw Marine Terminal site. Therefore, Zarzour Companies LLC may submit a modification to the Voluntary Cleanup Plan for consideration

If you have any questions or comments regarding the matter, please contact Jackson Jones, Project Manager, by phone 334-274-4182, or email at jackson.jones@adem.alabama.gov

Sincerely,

Sonja B. Favors, Chief
Industrial Hazardous Waste Branch
Land Division

APPENDIX E

SITE-SPECIFICS SOIL MANAGEMENT PLAN

bullock environmental, llc 4924 5th avenue south, birmingham, alabama 35222 t 205.876.1715 f 205.443.9413

CHICKASAW MARINE TERMINAL
SITE-SPECIFIC SOIL MANAGEMENT PLAN

Chickasaw Marine Terminal
150 Viaduct Road
Chickasaw, Mobile County, Alabama

This Soil Management Plan sets forth the procedures for handling and management of subsurface material during future use of the Site. Likewise, the plan details the recommended Site controls, waste management practices, and transportation of such material if it is disturbed.

Considering the continued commercial/industrial use of the Site and the results summarized in previous reports, there appears to be no viable risk through applicable exposure pathways (i.e., surficial soil, subsurface soil, groundwater, and vapor intrusion) to current or future occupants. As such, the following Soil Management Plan has been prepared to address handling and management of materials disturbed during future redevelopment efforts at the Site.

Chemicals of Concern

The primary COCs at the Site are free-phase petroleum hydrocarbons (determined to be hydraulic fluid) and select volatile organic compounds (VOCs) and polynuclear aromatic hydrocarbons (PAHs) present in soil and groundwater at levels exceeding applicable residential EPA RSLs or Maximum Contaminant Levels (MCLs).

Handling

Should future Site improvements require the disturbance of subsurface material on the Site, Bullock recommends that all personnel don Level D personal protective equipment (PPE) to minimize contact with potentially affected media (to include particulate dusk masks or similar protective measures). Beyond the standard PPE required for construction sites (hard hats, safety glasses, steel-toed boots, etc.), workers who handle the soil should do so with protective gloves, including but not limited to standard work gloves or impermeable material such as latex or nitrile. To minimize potential dispersion of particulates, field personnel should have on hand a water truck to maintain adequate moisture on the ground surface to mitigate fugitive dust.

Management

During future grading and excavation activities, field personnel should manage this material on the Site (i.e., No soil should be removed from the Site without first conducting an adequate waste characterization to ensure it is handled and disposed in accordance with applicable state and federal regulations). If future development requires the removal of soil from the Site, the contractor shall contact Zarzour Companies, LLC, who will then engage their representatives to oversee the management and disposal of this material. For soil managed or staged for longterm storage on the Site, Bullock recommends that this material (following characterization for its suitability) be transferred to a pre-designated area where it will be graded and seeded to minimize potential sediment runoff.

.

In addition (and if applicable), field personnel will manage all disturbed areas in accordance with the requirements set forth in a construction stormwater permit, and related Best Management Practices (BMPs) Plan, to be obtained from the Alabama Department of Environmental Management (ADEM) in advance of any land disturbance to exceed one acre. For soils accumulated in the pre-designated area of the Site, field personnel shall incorporate appropriate controls (i.e., silt fencing, hay bales, or other mitigation measures) to reduce or eliminate sediment runoff into Waters of the State.

Waste Management & Characterization

If waste is generated which is required to be transferred offsite, Zarzour Companies, LLC representatives will implement appropriate measures to segregate and properly manage potentially affected media, if encountered, during future grading and/or excavation activities. Such materials will be handled and managed in accordance with applicable ADEM Solid Waste regulations*.

Waste material (if any) generated during such grading or excavation activities will be characterized and staged in accordance with ADEM Administrative Code 335-14-2 for waste determination requirements. More specifically, the waste will be characterized in 20-cubic yard (yd^3) increments (representative, composite samples) with ten 20-yd^3 composite samples consolidated to represent a 200-yd^3 volume (should such a volume be generated). These waste characterization samples will be submitted for laboratory analysis of applicable COCs (i.e., metals or other applicable constituents as encountered) according to appropriate Environmental Protection Agency (EPA) Methods. If COCs are present (in total concentration) at levels exceeding 20 times the Toxicity Characteristic Leaching Procedure (TCLP) threshold, Zarzour Companies, LLC representatives will instruct the laboratory to conduct a TCLP analysis for that (or those) specific constituent(s) to confirm its character as non-hazardous or hazardous waste.

Representative sampling and analysis of the waste will be conducted to determine whether it exhibits one of the characteristics found at ADEM Admin. Code r. 335-14-2-.03. A "representative sample" is a sample of a universe that can be expected to exhibit the average properties of the universe. A representative sample is required to properly characterize a waste stream using sampling and analysis.

Following generation, Zarzour Companies, LLC representatives will stage the waste material on polyethylene sheeting in a designated area on the Site and cover the material with polyethylene to mitigate potential runoff. The stockpiles will be staged in 200-yd^3 volumes (i.e, ten separate stockpiles of waste containing 20 yd^3 each).

Upon characterization of the generated waste (should such waste be generated), Zarzour Companies, LLC will complete and submit ADEM Form 300 for review and approval by the Solid Waste Branch and dispose of such waste in accordance with the requirements set forth in an approved solid waste profile.

** Waste material (if any) generated during such grading or excavation activities will be characterized and staged in accordance with ADEM Administrative Code 335-14-2 for waste determination requirements. Representative sampling and analysis of the waste will be conducted to determine whether it exhibits one of the characteristics found at ADEM Admin. Code r. 335-14-2-.03. A "representative sample" is a sample of a universe that can be expected to exhibit the average properties of the universe. A representative sample is required to properly characterize a waste stream using sampling and analysis.*

1-methylnaphthalene was detected at a concentration of 125 milligrams per kilogram (mg/kg), above its EPA-established RSL of 0.077 mg/kg in soil boring . PCB Aroclor 1260 was detected at a concentration of 2.52 mg/kg, above its EPA-established RSL of 0.99 mg/kg. 1-methylnaphthalene was detected at a concentration of 0.182 milligrams per liter (mg/L) relative to its tap water RSL of 0.00000063, mg/L. 2-methylnaphthalene was detected at a concentration of 0.294 mg/L, above its EPA-established tap water RSL of 0.0036 mg/L. Phenol and naphthalene were detected at concentrations of 0.123 mg/L and 0.881 mg/L, exceeding their respective EPA-established tap water RSLs of 0.58 mg/L and 0.00012 mg/L.

1-methylnaphthalene was detected above its Industrial RSL of 0.077 mg/kg in five of the 12 soil samples (SB-1, 1-4 feet BLS, SB-3, 6-8 feet BLS, SB-4, 3-6 feet BLS, SB-5, 2-4 feet BLS, and SB-5, 4-7 feet BLS) at concentrations ranging from 0.134 mg/kg (SB-1, 1-4 feet BLS) to 8.37 mg/kg (SB-5, 4-7 feet BLS). Arsenic was also detected slightly above its Industrial RSL of 3.0 mg/kg in three soil samples (SB-1, 4-7 feet BLS, , SB-10, 2-4 feet BLS, and SB-10, 4-5.5 feet BLS) at concentrations ranging from 3.07 mg/kg (SB-10, 4-5.5 feet BLS) to 3.48 mg/kg (SB-10, 2-4 feet BLS).

1,2-dibromo-3-chloropropane was detected above its tap water RSL of 0.0002 mg/L in monitoring wells MW-3 and MW-4 at concentrations of 0.003 mg/L and 0.001 mg/L. 1,2-dichloroethane was detected above its tap water RSL of 0.005 mg/L in monitoring well MW-8 at a concentration of 0.025 mg/L. 1,1,2,2-tetrachloroethane was detected above its tap water RSL of 0.000076 mg/L in monitoring well MW-4 at a concentration of 0.001 mg/L. 1,2,3-trichloropropane was detected above its tap water RSL of 0.00000075 mg/L in monitoring wells MW-2, MW-3 and MW-4 at concentrations of 0.05 mg/L, 0.056 mg/L, and 0.001 mg/L. Finally, 1,2,3-trimethylbenzene was detected above its tap water RSL of 0.0055 mg/L in monitoring wells MW-3 and MW-4 at concentrations of 0.012 mg/L and 0.050 mg/L. 1-methylnaphthalene was detected in all nine groundwater samples at concentrations exceeding its tap water RSL of 0.00000063 mg/L with concentrations ranging from 0.000011 mg/L (MW-7) to 0.0317 mg/L (MW-3). 2-methylnaphthalene was detected above its EPA-established tap water RSL of 0.036 in monitoring wells MW-3 and MW-4 at concentrations of 0.0161 mg/L and 0.00694 mg/L. Finally, naphthalene was detected above its EPA-established tap water RSL of 0.000012 mg/L in monitoring wells MW-2, MW-3, and MW-4 at concentrations of 0.0036 mg/L, 0.00207 mg/L, and 0.00803 mg/L.
