Subject: **Voluntary Property Assessment Report**
Chickasaw Marine Terminal
150 Viaduct Road
Chickasaw, Mobile County, Alabama
Bullock Environmental, LLC Project #: 25-BUCH01

Dear Ms. Collins:

On behalf of Zarzour Companies, LLC, Bullock Environmental, LLC (Bullock) submits the attached Voluntary Property Assessment Report for the above-referenced Site. As detailed in the attached report, the assessment activities conducted to date, with respect to the former waste oil pit on the Site, indicate the area to be generally stable with no evidence of lateral migration toward Chickasaw Creek. Department personnel concurred with this conclusion in correspondence dated September 26, 2025 (included as an attachment to this report). These conditions, combined with the absence of viable exposure risks to current or future occupants of the Site (based on concentrations of chemicals of concern measured in onsite soil, groundwater, and sub-slab vapor), do not appear to warrant active remedial measures. Instead, an environmental covenant appears to be an appropriate remedy to address chemicals of concern remaining in onsite soil and groundwater.

If you have any questions or comments concerning the content and recommendations of this report, please call us at (205) 876-1715.

Sincerely,
BULLOCK ENVIRONMENTAL, LLC

Douglas A. Bullock
Principal

1.0 INTRODUCTION

1.1 SITE DESCRIPTION

The Site comprises approximately 15.4 acres (four parcels) of industrial land located along the western side of Chickasaw Creek in Chickasaw, Mobile County, Alabama. Currently vacant, the Site (known as the Chickasaw Marine Terminal) was most recently operated by Crimson Shipping Company, an ocean and intermodal cargo transportation service provider for the federal government (reportedly in operation on the Site since 1999).

Accessed from Viaduct Road on the western side, the Site is currently vacant and houses three structures.

A 33,000 square-foot corrugated, two-story, metal building (reportedly constructed in 1998), is located in the southeastern section of the Site (Office Building). This structure contains office space on the western side with a machine shop and warehouse (formerly used for lumber storage) occupying the remainder of the building space. A secondary containment area is present along the western exterior wall, which formerly housed an aboveground petroleum tank (removal date unknown). A concrete foundation for a high-power transmission line is located immediately northeast of the structure with overhead lines spanning west along Viaduct Road.

A 50,800 square-foot warehouse structure (north of the Office Building) is located in the central section of the Site (Main Building). This single-story, non-enclosed structure is steel-framed with corrugated metal siding and was reportedly built in 1971.

The northernmost building (reportedly constructed in 1995 and comprising approximately 15,000 square feet) is also a single-level, non-enclosed structure with corrugated metal siding.

Finally, approximately 5.90 acres of undeveloped land is located in the southwestern corner of the Site (south of Viaduct Road) and has most recently been used for the storage of shipping containers.

The remainder of the Site is covered with concrete and small sections of landscaping on the eastern and western boundaries. Chickasaw Creek (along with two barge slips) is present along the eastern boundary. Likewise, a railroad spur is present along the eastern boundary, providing access to the barge slips.

A Site Location Map (depicted on the U.S. Geological Survey Topographic Quadrangle *Chickasaw, Alabama*, dated 2020) is included as **Figure 1**. **Figure 2** illustrates the Site layout. As indicated on **Figure 1**, the Site is approximately located at north latitude 30° 45' 42" and west longitude 88°03’01”.

1.2 SITE HISTORY & PURPOSE

The Site reportedly began operating as a ship building and repair facility in 1917. Following its purchase by Gulf Shipbuilding Corporation in 1940, it functioned as a construction and repair facility for US Navy vessels during World War II for the War Department. Review of historical imagery and documentation prepared by the Department of the Army under the Defense Environmental Restoration Account (DERA) Program for formerly used War Department/Department of Defense (DOD) facilities revealed the Site housed a shallow waste oil collection pit (described as 200 feet by 300 feet) used to store discarded (waste) oil and sludges generated during shipbuilding, repair, and construction operations. Records indicate the waste oil pit was used from at least 1940 through the early 1970s. In the early 1970s, Gulf Shipbuilding Corporation sold the Site to Morgan Stanley and the Central States Southeast and Southwest Pension Fund (Teamsters Union). Review of aerial photographs indicate the oil pit was filled and covered by approximately 1974.

In approximately 1995, an additional warehouse was constructed on the northern portion of the Site. Additionally, in 1998, a warehouse/office building was constructed over a portion of the former waste oil pit.

Bullock Environmental, LLC (Bullock) prepared this document on behalf of Zarzour Companies, LLC to achieve the following objectives:

1. Demonstrate adequate assessment of chemicals of concern (COCs) in soil and groundwater on the Site to develop an appropriate remedial plan;
2. Evaluate onsite vapor intrusion risks (if any) on the Site;
3. Present a viable remedy to address COCs detected in onsite soil and groundwater through the Alabama Land Recycling and Economic Redevelopment Act (ALRERA);
4. Develop a remedial framework which defines the extent of corrective action necessary (if any) to eliminate potential exposure risks from, and migration of, free-phase petroleum hydrocarbons and dissolved petroleum constituents in groundwater within and surrounding the former waste oil pit;
5. Develop a Soil Management Plan to properly manage waste material generated during future Site improvements (should such improvements be needed);
6. Obtain ADEM approval of this Voluntary Property Assessment Report; and
7. Establish appropriate institutional controls (through an environmental covenant) to mitigate potential exposure to COCs potentially remaining in onsite soil and groundwater.

The following sections present the required elements of a Voluntary Property Assessment Report (as outlined in ADEM Administrative Code 335-15-4-.03). As such, this Voluntary Property Assessment Report will "*describe in sufficient detail those actions necessary to return the property to residential quality use, or at a minimum include restrictions such as land use controls, if appropriate to, satisfy the cleanup requirements for the qualifying property* (ADEM Administrative Code 335-4-.04(1))."

2.0 SUMMARY OF PREVIOUS ASSESSMENT ACTIVITIES

To date, Zarzour Companies, LLC has completed the following environmental due diligence studies on the Site:

1. A *Modified Phase I/II Environmental Site Assessment* (ESA), dated July 1998
2. A Phase II Environmental Site Assessment (ESA), dated February 2024, completed by Thompson Engineering (Thompson);
3. A Phase I ESA, dated March 21, 2024, completed by LaBella Associates, D.P.C. (LaBella);
4. A Limited Phase II ESA, dated September 4, 2024, completed by LaBella; and
5. Documents & Correspondence from 1995 Release Incident.

Additionally, while included in the March 21, 2024 Phase I ESA, this section also summarizes a release at the Site reported to ADEM in 1995.

The following sections summarize the findings from each investigation.

2.1 MODIFIED PHASE II ESA (JULY 1998)

In July 1998, Analytical Chemical Testing Laboratory, Inc. (ACT) completed a *Modified Phase I/II Environmental Site Assessment* (ESA) report for the southwestern section of the Site on behalf of B&F Terminals. The investigation included the installation of 18 shallow soil borings (to depths ranging from 1.5 feet to six feet below grade) and the collection of soil samples from each location for analysis of Total Petroleum Hydrocarbons (TPHs). The results from this investigation revealed elevated TPH concentrations (greater than 100 milligrams per kilogram) to be present in five of the 21 shallow soil samples submitted for analysis. One groundwater sample was also collected during this investigation. No detectable concentrations of petroleum constituents (benzene, toluene, ethylbenzene, total xylenes) were present in this groundwater sample (See **Appendix A**).

2.2 PHASE II ESA (FEBRUARY 2024)

On January 10, 2024, Thompson personnel installed ten soil borings (SB-1 through SB-10) using direct-push technology (DPT) and collected one soil sample from each location for analysis of Volatile Organic Compounds (VOCs), Semi-VOCs (SVOCs), Resource Conservation & Recovery Act (RCRA) metals, and polychlorinated biphenyls (PCBs) according to Environmental Protection Agency (EPA) Methods 8260B, 8270C, 6010B (7470C for Mercury), and 8082, respectively. Field personnel also collected six groundwater samples from soil borings SB-1 through SB-4, SB-9, and SB-10 for analysis of the same constituents listed above. Review of the results from this investigation (included in **Appendix A**) revealed 1-methylnaphthalene and PCB Aroclor 1260 to be present in one soil sample (SB-07) at concentrations exceeding their respective Industrial Regional Screening Levels (RSLs, last updated November 2024). Arsenic was also detected in one soil sample (SB-06) at a concentration above its applicable Industrial RSL of 3.0 mg/kg. Additionally, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, and phenol, were detected in one groundwater sample (SB-04) at concentrations exceeding their applicable tap water RSLs. Section 4.0 provides additional detail regarding the concentrations of each COC in soil and groundwater.

Finally, free-phase petroleum hydrocarbons (described as waste oil) were detected in borings SB-05, SB-06, SB-07, and SB-08 during this investigation.

With these results, Thompson concluded the Site to be "environmentally impacted," as evidenced by the petroleum-affected media (related to the former waste oil pit) encountered in five of the ten soil borings installed during the investigation. The report further stated the extent of petroleum-affected media had not been laterally assessed and remained unknown.

2.3 PHASE I ESA (MARCH 2024)

LaBella completed a Phase I ESA report on March 21, 2024 (included in **Appendix A**), in conformance with the scope of American Society of Testing & Materials (ASTM) Standard Practice E 1527-21. The *recognized environmental conditions* (RECs) identified in the Phase I ESA are presented below:

- Staining within the secondary containment area (west of the Office Building) from the removal of former ASTs;
- Potentially hazardous material in corroded, unlabeled containers, buckets, and drums (with evidence of a possible release) in the Office Building machine shop and Main Building;
- A former waste oil pit (approximately 200' x 300' in area) located in the east central section of the Site, formerly used by Gulf Shipbuilding Corporation, and reportedly used for the disposal of waste oil, sludges, and other potentially hazardous substances;

- A release incident, which occurred on the Site in 1995, which identified petroleum- and PCB-containing soils, prompting the removal of approximately 210 cubic yards of non-hazardous waste;
- Environmental impacts to soil and groundwater noted in the (Thompson) Phase II ESA, which documented free product in soil borings SB-05 through SB-08 (Soil borings SB-06, SB-07, and SB-08 were installed within the former waste oil pit area);
- Floor drains in the Main Building with possible staining observed near one of the drains;
- Unknown historical management practices of petroleum products and hazardous chemicals by previous owners/operators;
- A petroleum bulk storage terminal on the adjoining property to the north/northwest, which has been in operation for approximately 50 years; and
- Previous ship building operations on the bulk storage petroleum terminal property before its conversion to its current use.

2.4 LIMITED PHASE II ESA (MARCH 2024)

With the findings from the Phase I ESA, Zarzour Companies, LLC authorized LaBella to complete a Limited Phase II ESA in July and August 2024 (see **Appendix A** for complete report), which included the installation of 16 soil borings (SB-1 through SB-16), conversion of nine soil borings into groundwater monitoring wells (MW-1 through MW-9), and the collection of 18 sub-slab vapor samples beneath the three onsite structures.

Soil borings were advanced to depths ranging from approximately seven feet below land surface (BLS) and 16 feet BLS with soil samples collected from each location for analysis of VOCs, Polynuclear Aromatic Hydrocarbons (PAHs), RCRA Metals, and PCBs according to EPA Methods 8260B, 8270-SIM, 6010D (7471A for Mercury), and 8082. Review of the results obtained from the soil sampling activities revealed 1-methylnaphthalene and arsenic to be present in soil at concentrations exceeding their applicable Industrial RSLs (See Section 4.0 for further detail).

The Limited Phase II ESA also included the collection of nine groundwater samples (MW-1 through MW-9) for analysis of VOCs, Polynuclear Aromatic Hydrocarbons (PAHs), RCRA Metals, and PCBs according to the same EPA Methods listed above. Review of the results obtained from the groundwater sampling activities revealed five VOCs (1,2-dibromo-3-chloropropane, 1,2-dichloroethane [DCA], 1,1,2,2-tetrachloroethane [TCA], 1,2,3-trichloropropane, and 1,2,3-trimethylbenzene[TMB]) and one PAH compound (1-methylnaphthalene) were detected at concentrations exceeding their corresponding tap water RSLs (See Section 4.0 for further detail).

In addition to the dissolved-phase COCs described above, free-phase petroleum hydrocarbons were detected in monitoring wells MW-2, MW-3, and MW-4 during monitoring events conducted on August 2, August 21, and August 28, 2024 (See **Table 1** for water table elevations and free product thicknesses measured during the August 28, 2024, gauging event).

In an effort to identify the type of petroleum free product measured in onsite groundwater, a total petroleum hydrocarbon (TPH) fingerprint analysis was conducted on free product collected from three monitoring wells MW-2, MW-3, and MW-4 and the oily product encountered in soil sample SB-11 (4-6 feet BLS). Each of the samples was analyzed in accordance with EPA Method 8015. Based on the results of the fingerprint analysis, the product present in each of the samples submitted for laboratory analysis was consistent with hydraulic fluid. No other types of petroleum products were indicated such as gasoline, diesel fuel, jet fuel, motor oil, etc. Laboratory analytical results from the fingerprint analysis are included in **Appendix B**.

With regard to the sub-slab vapor results, four samples collected beneath the Office Building (SS-4 through SS-7) contained select VOCs at concentrations sufficient to represent a potential Estimated Increased Lifetime Cancer Risk (EILCR)/carcinogenic risk exceeding ADEM's recommended default threshold. Likewise, three sub-slab vapor samples collected beneath the Main Building and one sub-slab vapor sample beneath the northern building yielded similar results (i.e., indicating a potential carcinogenic risk above ADEM-recommended thresholds). As detailed in Section 4.4.2.3, however, the Main Building and Northern Building are not enclosed structures, ruling out a viable vapor intrusion pathway within these structures.

The analytical results for soil, groundwater, and sub-slab vapor (presented above) are further detailed in Section 4.0 of this Report and summarized in **Tables 2A** through **Table 4**. Laboratory analytical results from each investigation are presented in **Appendix B**.

2.5 RELEASE INCIDENT (1995)

In May 1995, Alabama Power Company (APCO) encountered petroleum-affected material in the subsurface while advancing a boring during the construction of a transmission tower foundation. APCO reported the spill to the Alabama Department of Environmental Management (ADEM) and collected one groundwater sample from the boring pit for analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), polynuclear aromatic hydrocarbons (PAHs), total lead, and oil and grease (O&G). Laboratory analysis of the groundwater sample revealed all results to be below applicable screening levels and/or Maximum Contaminant Levels (MCLs).

APCO personnel also collected two waste samples of the affected soil (approximately 210 cubic yards), which had been placed in roll-off containers for subsequent disposal. The waste samples were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) metals, volatile organic compounds (VOCs), semi-VOCs (SVOCs), and pesticides as well as BTEX, total petroleum hydrocarbons (TPH), and polychlorinated biphenyls (PCBs). Laboratory analysis revealed no compounds to be present in the waste material at concentrations exceeding their applicable TCLP thresholds (for characteristically hazardous waste). Likewise, BTEX concentrations were present below applicable screening levels established by ADEM; however, both waste samples contained elevated TPH concentrations, indicating a petroleum source. Finally, PCBs were detected in both waste samples; however, the concentrations were less than 50 parts per million (ppm), exempting the material from 40 CFR Part 761 requirements.

With no UST discovered in the vicinity of the release area, the UST Branch referred the matter to Hydrogeology and the Industrial Hazardous Waste Unit for review. Following its review of the laboratory analytical results provided by APCO, ADEM concluded the waste material to be non-hazardous and recommended coordination of its disposal through the Solid Waste Branch. With this direction from ADEM, APCO personnel then proceeded with the transportation and disposal of the waste at a permitted landfill. Upon completion, ADEM determined no additional actions to be warranted. Available documents relating to this release incident are included in **Appendix A**.

3.0 SCOPE OF WORK AND REPORT ORGANIZATION

3.1 SCOPE OF WORK

In accordance with ADEM Administrative Code 335-15-4-.03 and . 335-15-4-04, this Voluntary Property Assessment Report includes the following:

335-15-4-.03 (2) (Voluntary Property Assessment Plan/Report Content)

A Voluntary Property Assessment Plan (and Report) *submitted by an applicant shall describe in sufficient detail those actions planned to develop the information necessary to perform a risk assessment or identify applicable cleanup standards for the qualifying property utilizing requirements found in the Alabama Risk-based Corrective Action Guidance (ARBCA)Manual or other appropriate risk-based corrective action principles through the appropriate implementation of applicable response actions or land use controls. The* (Report) *should describe the methods to be used to determine the type(s) and the amount(s) of any contamination including the delineation of all soil and groundwater contamination discovered or known to exist within the qualifying property boundaries or portions thereof. Information submitted in the Voluntary Property Assessment* (Report) *shall be submitted in a format consistent with the Alabama Environmental Investigation and Remediation Guidance (AEIRG).*

3.2 REPORT ORGANIZATION

Section 4.0 summarizes Site characterization information and includes the general geology, hydrogeology, and lithology of the Site area and provides Site-specific information regarding COCs detected in onsite soil, groundwater, and sub-slab vapor. Section 5.0 details the proposed land use controls (to be incorporated into an environmental covenant) to address potential exposure risks related to the former waste oil pit and includes a Soil Management Plan for use during future Site improvements (should such improvements include the disturbance of the underlying soil and/or groundwater). Section 6.0 presents conclusions and recommendations while Section 7.0 lists the reference sources cited throughout this report.

4.0 SITE CHARACTERIZATION AND FIELD INVESTIGATION RESULTS

4.1 SURROUNDING POPULATION

Properties immediately surrounding the Site include industrial and/or undeveloped land with Chickasaw Creek located immediately east. Center Point Terminal (bulk storage petroleum storage facility) and Delta Marine Services are located north-northwest of the Site while Chickasaw Marine Services is present immediately south. Viaduct Road and Zenith Energy are located west of the Site. A surrounding land use map is included as **Figure 3**.

4.2 GEOLOGY AND HYDROGEOLOGY

According to the Geological Survey of Alabama (GSA) Geologic Map of Alabama, Special Map 220, dated 1988, the Site is located within the East Gulf Coastal Plain, Deltaic Plain. The East Gulf Coastal Plain physiographic section of the Coastal Plain province in Alabama is an area of Mesozoic and Cenozoic sediments in the southern and western parts of the state, where mostly unconsolidated sediments of the Coastal Plain overlap consolidated rocks of the Plateaus, Valley and Ridge, and Piedmont provinces.

A search of public and private water wells within one mile of the Site revealed three United States Geological Survey (USGS) wells to be present within this radius (**Figure 4**). Review of available records for each well revealed no additional information regarding depth, date of installation, or the geologic formation into which each was installed. However, considering their respective distances from the Site (closest well is more than one-half mile west of the Site and upgradient relative to groundwater flow), none appear to be hydraulically connected.

Site topography, which has been altered by development, is generally level. Stormwater is directed away from the Site via surface flow, infiltration, curb and gutter, and storm drains. Various factors can affect groundwater flow direction. In general, for unconfined aquifers, the direction of shallow groundwater movement mirrors surface topography and generally flows from hilltops and uplands (recharge areas) to stream valleys (discharge areas). Based on previous water table elevation measurements, shallow groundwater beneath the Site appears to flow east toward Chickasaw Creek. **Table 1** summarizes the water table elevations measured on the Site. **Figure 5A** and **Figure 5B** illustrate the estimated direction of groundwater flow across the Site, which appears to flow east towards Chickasaw Creek.

4.3 SITE SOILS

According to the United States Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS) Web Soil Survey, the Site is underlain by Dorovan soils, which consist of very deep, very poorly drained, moderately permeable soils on densely forested flood plains, hardwood swamps, and depressions in the Southern Coastal Plain Major Land Resource Areas. They formed in highly decomposed acid-organic materials. The underlying soil texture is described as mucky peat, comprising highly organic soils and peat. Slopes are reportedly less than one percent. Soils encountered during onsite assessment activities included silty sand and sandy, peaty loam underlain by intermittent layers of silty clay and plastic clay.

4.4 RELEASE CHARACTERIZATION AND DISTRIBUTION OF COCs

Considering the results of assessment activities conducted at the Site, the primary COCs to be addressed in this Voluntary Property Assessment Report include free-phase petroleum within the former waste oil pit area and dissolved VOCs and PAHs in the groundwater proximal to the former waste oil pit. Low-level VOCs, naphthalene, and 1-methylnaphthalene were also detected in more distal wells (MW-2, MW-8, and MW-9); however, the concentrations measured do not appear to pose a risk to future occupants via applicable exposure pathways.

The former waste oil pit represents the sole contaminant source on the Site. Given the relatively low concentrations of dissolved VOCs and PAHs located in groundwater surrounding the former oil pit area, however, it appears the free-phase petroleum (determined to be hydraulic fluid) is generally static, showing no indications of significant lateral migration. The underlying soil composition, containing abundant peat with high levels of total organic carbon (ranging from 18% to 58%, *Peat Definitions: A Critical Review*, Sage Journals, October 4, 2022) supports the absence of lateral migration of free-phase and dissolved petroleum compounds associated with the former oil pit.

4.4.1 Chemicals of Concern

The primary COCs considered in this Voluntary Property Assessment Report include VOCs and PAHs (in subsurface soil and groundwater and free-phase hydrocarbons in shallow groundwater overlying the former waste oil pit.

4.4.2 Distribution of COCs

4.4.2.1 Soil

Surficial Soil: Site investigations revealed no COCs to be present in surficial soil at concentrations exceeding applicable EPA RSLs.

Subsurface Soil: 1-methylnaphthalene, PCB Aroclor 1260, and arsenic have been detected in subsurface soil within and immediately surrounding the former waste oil pit.

- **1-methylnaphthalene** has been detected above its Industrial in soil borings SB-07 (January 2024 Investigation), SB-1 (1-4 feet BLS), SB-3 (6-8 feet BLS), SB-4 (3-6 feet BLS), SB-5 (2-4 feet BLS), and SB-5 (4-7 feet BLS) (July 2024 Investigation);
- **PCB Aroclor 1260** was detected in soil boring SB-07 above its Industrial RSL (January 2024 Investigation); and
- Finally, **arsenic** was detected in four soil samples (SB-06 [January 2024 Investigation], SB-1, 4-7 feet BLS, , SB-10, 2-4 feet BLS, and SB-10, 4-5.5 feet BLS [July 2024 Investigation]) at concentrations slightly exceeding its Industrial RSL.

Table 2A through **Table 2C** summarize the analytical results for the soil samples collected at the Site while **Figure 6A** and **Figure 6B** illustrate the extent of COC-affected media on the Site. The laboratory analytical data reports are included in **Appendix B**.

4.4.2.2 Groundwater

The analytical results for groundwater samples collected during the January 2024 and August 2024 assessments were compared to the EPA Maximum Contaminant Levels (MCLs, or to EPA RSLs for tap water, if no MCL was listed). The results indicated the following:

- **1,2-dibromo-3-chloropropane** was detected above its tap water RSL of 0.0002 mg/L in monitoring wells MW-3 and MW-4 at concentrations of 0.003 mg/L and 0.001 mg/L.
- **1,2-DCA** was detected above its tap water RSL of 0.005 mg/L in monitoring well MW-8 at a concentration of 0.025 mg/L.
- **1,1,2,2-TCA** was detected above its tap water RSL of 0.000076 mg/L in monitoring well MW-4 at a concentration of 0.001 mg/L.
- **1,2,3-trichloropropane** was detected above its tap water RSL of 0.00000075 mg/L in monitoring wells MW-2, MW-3 and MW-4 at concentrations of 0.05 mg/L, 0.056 mg/L, and 0.001 mg/L.
- **1,2,3-TMB** was detected above its tap water RSL of 0.0055 mg/L in monitoring wells MW-3 and MW-4 at concentrations of 0.012 mg/L and 0.050 mg/L.
- **1-methylnaphthalene** was detected in all nine groundwater samples at concentrations exceeding its tap water RSL of 0.00000063 mg/L with concentrations ranging from 0.000011 mg/L (MW-7) to 0.0317 mg/L (MW-3). Additionally, it was detected in temporary well SB-04 (January 2024 investigation) at a concentration of 0.183 mg/L.
- **2-methylnaphthalene** was detected above its EPA-established tap water RSL of 0.036 in monitoring wells MW-3 and MW-4 at concentrations of 0.0161 mg/L and 0.00694 mg/L. Additionally, it was detected in temporary well SB-04 (January 2024 investigation) at a concentration of 0.294 mg/L.
- **Naphthalene** was detected above its EPA-established tap water RSL of 0.000012 mg/Lin monitoring wells MW-2, MW-3, and MW-4 at concentrations of 0.0036 mg/L, 0.00207 mg/L, and 0.00803 mg/L. Additionally, it was detected in temporary well SB-04 (January 2024 investigation) at a concentration of 0.123 mg/L.
- **Phenol** was detected in temporary well SB-04 above its EPA-established tap water RSL of 0.58 mg/L at a concentration of 0.881 mg/L

Bullock returned to the Site on August 8, 2025, to conduct a supplemental groundwater monitoring event. During this event, monitoring well MW-9 could not be located. As such, Bullock personnel collected groundwater samples from monitoring wells MW-1 through MW-8 for analysis of VOCs and PAHs according to EPA Methods 8260B and 8270SIM. Review of the analytical results from this event revealed the following:

- **VOCs** were not detected in any of the groundwater samples collected from monitoring wells MW-1 through MW-8 at concentrations exceeding laboratory reporting limits.
- **Benzo(a)anthracene** was detected above its tap water RSL of 0.0.00003 mg/L in monitoring well MW-1 at a concentration of 0.04 mg/L.
- **Benzo(a)pyrene** was detected above its MCL of 0.0002 mg/L in monitoring well MW-1 at a concentration of 0.054 mg/L.
- **Chrysene** was detected above its tap water RSL of 0.025 mg/L in monitoring well MW-1 at a concentration of 0.158 mg/L.
- **Fluorene** was detected above its tap water RSL of 0.029 mg/L in monitoring well MW-1 at a concentration of 0.232 mg/L.
- **Indeno(1,2,3-cd)pyrene** was detected above its tap water RSL of 0.00025 mg/L in monitoring well MW-1 at a concentration of 0.118 mg/L.
- **Pyrene** was detected above its tap water RSL of 0.012 mg/L in monitoring well MW-1 at a concentration of 0.165 mg/L.

Table 3A through **3C** summarize the analytical results for the groundwater samples collected at the Site while **Figure 7A** through **Figure 7C** illustrate the extent of COC-affected groundwater on the Site. The laboratory analytical data reports are included in **Appendix B**.

As summarized above and detailed in Tables 3A through 3C, COCs in groundwater, while present in localized areas at concentrations exceeding applicable MCLs or tap water RSLs, does not appear to represent a viable exposure risk to current or future occupants of the Site, provided certain land use controls are put into place through an environmental covenant (see Section 5.0 and 6.0).

4.4.2.3 Vapor Intrusion

Sub-slab vapor samples collected beneath the office building contained certain VOCs at concentrations with sufficient volatility and toxicity to warrant further evaluation. As summarized below and detailed in **Table 4**, benzene, benzyl chloride, 1,3-Butadiene, 1,1-DCA, 1,4-Dioxane, ethylbenzene, methylene chloride, naphthalene,, and PCE were detected at concentrations indicating a potential cumulative risk exceeding the default EILCR of $1X10^{-6}$. Non-cancer risk thresholds were not exceeded in any of the sub-slab vapor samples collected beneath the office building.

OFFICE BUILDING-SUMMARY OF CUMULATIVE RISKS		
Sample ID	Carcinogenic Risk: Default threshold ($1X10^{-6}$)	Non-Carcinogenic Risk; Default Threshold (0.1)
Office SS-1	4.57E-07	1.87E-02
Office SS-2	4.00E-07	1.69E-02
Office SS-3	6.58E-10	1.33E-03
Office SS-4	1.89E-06	7.75E-02
Office SS-5	1.4E-06	4.79E-02
Office SS-6	1.04E-06	7.48E-02

OFFICE BUILDING-SUMMARY OF CUMULATIVE RISKS		
Office SS-7	1.22E-06	6.27E-02
Office SS-8	2.88E-07	1.70E-02
Maximum sub-slab vapor concentrations beneath office building:	Benzene (SS-5): 20 µg/m³ 1,3-Butadiene: 16 µg/m³ 1,1-DCA (SS-5): 51 µg/m³ 1,4-Dioxane (SS-7): 79 µg/m³ Ethylbenzene (SS-7): 30 µg/m³	Methylene Chloride (SS-2): 232 µg/m³ Naphthalene (SS-5): 6.8 µg/m³ Benzyl Chloride (SS-6): 5.2 µg/m³ PCE (SS-1): 22 µg/m³

Appendix C contains a copy of the Vapor Intrusion Screening Level (VISL) Calculator output with the COC concentrations detected in each sub-slab vapor sample (along with the carcinogenic risk associated with each compound).

However, the September 2024 Phase II ESA report concluded that if Site-specific data were used to calculate exposure risk (e.g., depth to groundwater, soil characteristics, and associated attenuation factors), a vapor intrusion risk could likely be ruled out as a concern. In an effort to validate this conclusion (i.e., accounting for the media-specific variables noted above), Bullock utilized the analytical solutions of Johnson and Ettinger (1991) for contaminant partitioning and subsurface vapor transport into buildings to derive site-specific attenuation factors (AFs) for the evaluation of vapor intrusion risk to current and/or future occupants of the office building. As demonstrated from these models (detailed in **Appendix C**), use of the site-specific lithology and depth to groundwater, resulted in a modified AF value 0.003 (relative to the default AF of 0.03 employed in the VISL Calculator), more accurately representing actual subsurface conditions at the Site. The modified AF, combined with the maximum concentrations for each COC in soil vapor beneath the office building structure, resulted in the following predicted carcinogenic risk for each compound.

COC	Maximum Sub-Slab Vapor Concentration	Predicted Vapor Intrusion Risk
Benzene	20 µg/m³	3.82E-08
1,3-Butadiene	16 µg/m³	6.23E-08
Benzyl Chloride	5.2 µg/m³	1.17E-07
1,1-DCA	51 µg/m³	2.00E-08
1,4-Dioxane	79 µg/m³	9.66E-08
Ethylbenzene	30 µg/m³	1.83E-08
Methylene Chloride	232 µg/m³	1.63E-09
Naphthalene	6.8 µg/m³	5.66E-08
PCE	22 µg/m³	1.40E-09
Combined Vapor Intrusion Risk- Maximum COC Concentrations:		**4.12E-07**

As detailed in the table above (with supporting documentation included in **Appendix C**), the maximum sub-slab vapor concentrations of each compound do not represent a viable vapor intrusion risk to current or future commercial workers on the Site. Likewise, the combined vapor intrusion risk (using the maximum concentrations measured in sub-slab vapor) does not exceed the default EILCR of 1.0 E^{-6}.

Regarding the remainder of onsite structures (Main Building and Northern Building), both are open warehouse buildings with ceiling heights of 30 feet or more. As neither of these buildings are enclosed structures, evaluation of indoor vapor intrusion risk is not warranted.

With these findings, vapor intrusion can removed from further consideration as a viable exposure risk.

Figure 8 illustrates the location of each sub-slab vapor sample collected during the July 2024 investigation.

5.0 PROPOSED LAND USE CONTROLS TO BE INCORPORATED ONTO THE ENVIRONMENTAL COVENANT

As detailed in previous sections, the purpose of this Voluntary Property Assessment Report is to mitigate or altogether eliminate potential exposure risks and migration of petroleum-affected soil and groundwater from the former oil pit area. Following discussions with ADEM personnel regarding the low likelihood of potential contaminant mitigation, ADEM personnel concurred that the use of an environmental covenant constitutes a sufficient remedy which will be protective of human health and the environment. A copy of ADEM's correspondence dated September 26, 2025, indicating its willingness to consider an alternative to active remedial measures, is included in **Appendix D**.

5.1 ELEMENTS OF ENVIRONMENTAL COVENANT

Considering the analytical results of soil, groundwater, and sub-slab vapor detailed in Section 4.0, the assessment activities conducted to date in connection to the former waste oil pit indicate the area to be generally stable with no evidence of, or likely potential for, lateral migration to Chickasaw Creek (located along the eastern boundary of the Site). These conditions, combined with the absence of viable exposure risks to current or future occupants of the Site (based on COC concentrations measured in onsite soil, groundwater, and sub-slab vapor), do not appear to warrant active remedial measures. Instead, an environmental covenant (combined with a Soil Management Plan as summarized in Section 5.2) appears to be an appropriate remedy to address onsite conditions. As such, Zarzour Companies, LLC has included a draft environmental covenant (under a separate cover) for review and approval by ADEM. The environmental covenant proposes the following land use restrictions (which would be incorporated onto the deed):

1. The use of groundwater for potable or irrigation purposes from or on the Site is prohibited;
2. Use of the Site shall be limited to commercial/industrial activities (i.e., residential housing, schools, daycares, hospitals, etc. shall be prohibited);
3. Future Site conditions will maintain an impermeable surface overlying former oil pit area; and
4. Should future Site improvements require the disturbance or removal of soil on parcel #2208440001006.000 of the Site, such activities will occur in accordance with the Soil Management Plan (**Appendix E**) as well as applicable ADEM Solid Waste regulations.

5.2 DEVELOPMENT OF A SOIL MANAGEMENT PLAN

As petroleum-affected media will remain in the subsurface beneath one parcel of the Site (Parcel #2208440001006.000), future Site improvements (which require the excavation or disturbance of subsurface material potentially containing petroleum-affected media) should follow the elements presented in the Site-specific Soil Management Plan (included as **Appendix E**) to ensure the proper management and handling of this material.

6.0 CONCLUSIONS & RECOMMENDATIONS

6.1 CONCLUSIONS

Considering the information detailed in this Voluntary Property Assessment Report, the investigations completed to date indicate the COCs in onsite soil include select VOCs, PAHs, and free-phase petroleum hydrocarbons within and immediately surrounding the former waste oil pit. The extent of COC-affected media does not extend beyond the Site boundary (as demonstrated in previous assessments completed by Zarzour Companies, LLC). As detailed in previous sections of this report, the following COCs are present in soil, groundwater, and soil vapor at concentrations exceeding applicable RSLs established by EPA.

Soil: 1-methylnaphthalene, PCB Aroclor 1260, and arsenic.

Groundwater: 1,2-dibromo-3-chloropropane, 1,2-DCA, 1,1,2,2-TCA, 1,2,3-trichloropropane, 1,2,3-TMB, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, and phenol, Benzo(a)anthracene, Benzo(a)pyrene, Chrysene, Fluorene, Indeno(1,2,3-cd)pyrene, and Pyrene.

Soil Vapor: Various VOCs; however, none are present at sufficient concentrations to represent a viable human health risk.

6.2 RECOMMENDATIONS

As petroleum-affected media will remain in the subsurface beneath one parcel of the Site (Parcel #22084400010), Bullock recommends the use of an environmental covenant to address COCs remaining on the Site. While the COCs detected in onsite soil, groundwater, and soil vapor do not appear to pose a viable risk to current or future occupants in the absence of such activity land use limitations (AULs), incorporating formal controls onto the deed of the Site will ensure the potential exposure pathways remain incomplete, granting ADEM the regulatory authority to enforce such AULs should it be required. Following ADEM's approval of the draft covenant (provisions enumerated below) and the expiration of the 30-day public notice period (to include the Voluntary Property Assessment Report and draft covenant) Zarzour Companies, LLC would then record the environmental covenant onto the deed of the Site. The environmental covenant will include following land use restrictions:

1. The use of groundwater for potable or irrigation purposes from or on the Site is prohibited;
2. Use of the Site shall be limited to commercial/industrial activities (i.e., residential housing, schools, daycares, hospitals, etc. shall be prohibited);
3. Maintain impermeable surface overlying former oil pit area; and
4. Should future Site improvements require the disturbance or removal of soil on parcel #2208440001006.000 of the Site, such activities will occur in accordance with the Soil Management Plan (**Appendix E**) as well as applicable ADEM Solid Waste regulations.

Finally, following the expiration of the public notice period, Bullock recommends the proper abandonment of all onsite monitoring wells in accordance with the procedures set forth in Appendix B.5 of the AEIRG (revised February 2017). Following ADEM's approval of the Voluntary Property Assessment Report, Bullock will mobilize to the Site and abandon all monitoring wells. Upon completion, Bullock will deliver a Monitoring Well Abandonment Report to ADEM for review and approval.

1. Introduction

1.1 Scope and Purpose

Thompson Engineering, Inc. herein referred to as Thompson Engineering, has completed the Phase II Environmental Site Assessment (ESA) for the Buchanan Lumber facility at the Chickasaw Marine Terminal in Chickasaw, Alabama (Figure 1). The objective was to evaluate if soil and groundwater at the facility has been impacted with chemical contamination. This Phase II ESA was performed concurrently with a Phase I ESA.

This investigation was performed in general conformance with American Society for Testing and Materials (ASTM) E1903-11, Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process and elements of the Alabama Environmental Investigation and Remediation Guidance, Revised February 2017. This assessment was designed to be a preliminary assessment of shallow soils and groundwater conditions at the study site and was limited in scope. The analytical data acquired represents the specific locations and depths sampled and may not be representative of site conditions at other locations.

1.2 Special Terms and Conditions

This report has been prepared for the exclusive use and benefit of the addressee of this report. Others who use the report do so at their own peril. Thompson Engineering consents that its information and reports may be furnished to and used by others participating in the financing and/or development of the project (and for reports involving real property transactions, other parties of the transaction), but only in the same manner and extent as if such others were the addressees and the Client. The terms, conditions, and limitations of liability contained in the Thompson Engineering/Client Agreement shall apply to others to whom the Client furnishes such information and reports. Thompson Engineering will not release this report to third parties without the Client's written consent. The contents of this report shall not be relied upon by any other party without the express written consent of Thompson Engineering.

In performing this assessment, Thompson Engineering strives to conform to generally accepted practices of other consultants undertaking similar studies at the same time and in the same geographical area. Thompson Engineering has attempted to observe a degree of skill and care generally exercised by the technical community under similar circumstances and conditions. No other representation, either expressed or implied, is intended and no warranty or guarantee is included.

2. SITE BACKGROUND

2.1 Current Usage of the Subject Property

The subject property includes four (4) parcels, comprising approximately 15.3 acres in size, within the Chickasaw Marine Terminal of Mobile County, Alabama. Most of the site is developed and utilized for industrial operations, with some vegetated, undeveloped areas on the two western most parcels. The topography across the site is relatively flat. A topographic map of the facility is presented in Figure 1.

2.2 Site History

A summary of the site history was compiled from the review of historical documents and reports, historical aerial photographs dating back to 1938, city directories, interviews and the review of environmental databases.

According to historical documentation, the shipyard was established around 1917. In 1940, the property was purchased by Gulf Shipbuilding Corporation. During WWII, the shipyard was contracted by the War Department to assist in the war efforts to construct and repair naval vessels. Based on the review of historical aerial photographs and documentation, it was identified that Gulf Shipbuilding operated a 200' x 300' waste oil pit onsite to dispose of waste oil, sludges, and possibly other hazardous chemicals generated during the shipbuilding and repair process. The waste oil pit is known to have been in operation from 1940 to the 1970s. In 1974, an aerial photograph of the site shows the development of a new warehouse on the site and the footprint of the waste oil pit appears covered with dirt. Gulf Shipbuilding Corporation sold the property to the Morgan Stanley and Central States Southeast and Southwest Pension Fund (Teamsters Union). It is unknown when this transaction occurred, but it is believed to have been in the early 1970s. During the 1980s, the site was investigated by the Department of the Army under the Defense Environmental Restoration Account (DERA) program for the formerly used War Department sites (now known as the DOD). The investigation indicated that the site was never owned or leased by the DOD and therefore the site did not qualify for a restoration project under the DERA program (see Appendix C). Between 1992 and 1997, based on aerial photographs, an additional warehouse was constructed on the northern portion of the site. The site remained relatively unchanged until sometime between 1997 and 2006, when the empty lot across the street began to be utilized as a staging area and a warehouse was built over the former waste oil pit.

In 1995, the Alabama Power Company (APCO) subcontracted with Jordan Pile Driving Company to construct the transmission tower seen on the site today. During the construction process, while "jetting a hole", a large amount of a dark black substance was sprayed over an area of around 1,000-square feet. APCO cleaned up this spill and collected approximately 210-cubic yards of contaminated materials in seven (7) roll-off containers. APCO contacted ADEM during this course of the events and an investigation by ADEM's UST Corrective Action Unit was conducted. Based on the ADEM report (attached in Appendix D), APCO collected samples from two (2) of the roll-off containers for analysis. Samples collected showed levels of total petroleum hydrocarbons (TPH) and total PCBs contamination of 320,000 and 45 ppm, respectively. Review of the ADEM report indicates that the UST Branch did not have the authority to manage this site and referred it to the Hydrogeologic Unit for review.

During the initial Phase I site investigation, Thompson field personnel spoke with Mr. Alan Weatherford with Crimson Shipping. He informed Thompson about an old Prichard waterline that

supposedly ran through the site underneath the south warehouse and most likely ran through the old waste oil pit. Mr. Alan stated that because of this waterline, the entire foundation of the warehouse sank (See Appendix B, Photograph 8). The water line has since been rerouted around the site.

A list of the known Ownerships or Lease Holders is listed below:

- Chickasaw Shipyard – 1917
- Gulf Shipbuilding Corporation – 1940
- Morgan Stanley Central States Southeast and Southwest Area Pension Fund (Teamsters Union) – sometime after WWII and owned at least through 1987
    - Leased by Halter Marine, Inc.
- Buchanan Lumber Mobile, LLC – 1900s
    - Leased by Crimson Shipping

2.3 Site Investigation

The subject property includes 4 parcels of land totaling approximately 15.3 acres. Two (2) of the parcels are located on Chickasaw Creek and contain three (3) warehouse buildings with metal sidings and metal roofs. The other two (2) parcels are located across the street and are currently being used as a laydown yard. During the site inspection, two of the warehouses had an empty interior, while one warehouse contained building materials and heavy machinery. Connected to the southernmost warehouse, is an office and a maintenance shop. During the initial site inspection, the maintenance shop contained more than twenty (20) 5-gallon buckets and at least five (5) 55-gallon drums of hydraulic fluid. Outside of the maintenance shop, there is a concrete area with a subtle enclosure containing 5 (five) ASTs. Also, outside of the maintenance shop, there were an additional ten (10) 5-gallon buckets of hydraulic fluid.

During the field work, the above-mentioned ASTs and 5-gallon buckets were removed from the site. However, the 55-gallon drums were open and still present during field activities. It should also be noted that the containment pit was left partially filled with oil after the removal of the ASTs (See Appendix B, Photograph 9).

An aerial photograph of the site is provided in Figure 2 below. The adjacent property owners are provided below in Figure 3.

2.4 Topography

The subject property is relatively flat (Figure 1). The subject property elevation is approximately 30 feet NGVD (National Geodetic Vertical Datum). Based on regional topography, groundwater could be expected to flow to the north-northeast.

2.5 Geology

The subsurface lithology was identified by visual inspection of soil samples during direct push boring advancement. The lithologic units identified at the site are comprised of a combination of silts, clays and sands.

3. METHODOLOGIES

3.1 Field Activities Summary

Field activities included the collection of soil and groundwater samples from direct push borings. Prior to initiating direct push activities, Alabama One Call was contacted to clear utilities at the site where access was possible.

3.2 Soil Sampling

On January 10, 2024, soil samples were collected with a stainless-steel hand auger and direct push technology (DPT) at ten (10) locations, SB-1 through SB-10, as shown on Figure 4. The borings were advanced via a four-ft. stainless steel probe with factory supplied, pre-cleaned, Polyethylene Terephthalet (PETG) clear sample liner inserted into the probe for retrieval of soil samples. The boreholes were advanced in 4-ft. intervals via DPT by a Geoprobe drilling unit to depth, except for SB-05 thru SB-08 which were advanced in 2 ft. intervals. Continuous samples were collected from ground surface to approximately 9 to 20 ft. below ground surface (bgs). SB-05 was only advanced to 3 feet due to the presence of a large rock preventing advancement. Soils were visually classified with an entry into a bound field logbook.

Once visually classified, one composite soil sample was collected for each soil boring from the ground surface to the top of the water table. The soil samples from each boring location were composited using stainless equipment. Composited samples were then transferred to a series of pre-cleaned sample containers provided by the analytical laboratory and each container was filled as completely as practical possible to minimize headspace. Boring logs are provided in Appendix A. Following completion of the collection of soil samples, temporary monitor wells were constructed at each location.

After sample collection, labels were prepared and fixed to the containers with sample name, date and time collected, and laboratory analysis, the sampling information was entered on the chain-of-custody (COC). The containers were placed on ice in a cooler and delivered to Pace Analytical in Mobile, Alabama. Soil samples were submitted to the laboratory for the following chemical analyses: RCRA metals, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and polynuclear aromatic hydrocarbons (PAHs).

All drilling materials were decontaminated after each use to prevent cross-contamination between sample intervals and borings. All sampling equipment that contacted the samples was decontaminated prior to use by washing with Liquinox ® detergent, rinsing with deionized water, rinsing with pesticide grade isopropyl alcohol, and final rinsing with deionized water.

3.3 Groundwater Sampling

After the borings were advanced into the water table, a temporary 1-inch diameter piezometer was installed with ten ft. of 1-inch diameter schedule 40 PVC with 0.010-inch slotted screen. Following installation, temporary groundwater wells SB-01, SB-02, SB-03, SB-04, SB-09, and SB-10 were developed with the use of a peristaltic pump until the groundwater was clear and generally free of fines. SB-05, SB-06, SB-07, SB-08 were not developed due to the presence of more than two inches of free product/oily materials in the wells. Following development, groundwater samples were collected from these locations using a peristaltic pump. Figure 4 illustrates groundwater sampling locations.

Groundwater samples were collected in appropriate laboratory supplied containers. After sample collection, labels were prepared and fixed to the containers with sample name, date and time collected, and laboratory analysis, the sampling information was entered on the COC and the containers were placed on ice in a cooler and delivered to Pace Analytical in Mobile, Alabama. Groundwater samples were submitted to the laboratory and analyzed for the following chemical analyses: RCRA metals, VOCs, SVOC, and PCBs.

Upon completion of groundwater sampling procedures, the temporary monitor wells were removed from the subsurface and the boreholes were backfilled with bentonite pellets.

4. INVESTIGATION RESULTS SUMMARY

Screening of laboratory analytical results for soil and groundwater are based on comparison of data to the most recent (November 2023) U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSLs) for industrial soils and groundwater/tap water as recommended in the Alabama Department of Environmental Management (ADEM) Alabama Environmental Investigation and Remediation Guidance revised February 2017. RSLs are conservative health-based concentrations of hazardous constituents determined to be indicators for the protection of human health or the environment.

4.1 Investigation Soil Analytical Results

Six RCRA metals, arsenic, barium, cadmium, chromium, lead, and mercury, were detected in several soil samples collected. Arsenic was reported in seven sample locations. One sample location (SB-06) was above the EPA industrial RSL for arsenic. Chromium and lead were detected in all ten sample locations. Both were reported at concentrations below their respective EPA industrial RSLs. Chromium does not have an established EPA RSLs.

Isopropylbenzene (cumene) and methyl acetatethe were the only reported VOCs. Isopropylbenzene (cumene) was reported in soil sample SB-07. Methyl acetatethe was reported in soil samples SB-05 and SB-06. The reported VOCs were below their respective EPA industrial RSLs.

SVOCs were reported in two of the soil samples collected. 1-Methylnaphthalene and 2-methylnaphthalene were reported in soil sample SB-07. 1-Methylnaphthalene was reported above its EPA industrial RSL. In soil sample SB-10, benzo[a]pyrene, benzo[b]fluoroanthene, chrysene, fluoroanthene, and pyrene were reported. None of the reported concentrations in SB-10 were above their respective EPA Industrial RSL.

Only one PCB, PCB-1260 (Aroclor 1260), was reported in soil sample SB-07. This reported concentration was above its EPA Industrial RSL.

The soil laboratory analytical report and COC are provided in Appendix E. Tables 1a through 1c summarize the soil analytical results.

4.2 Investigation Groundwater Analytical Results

Five RCRA metals were reported in at least one groundwater sample collected. Arsenic and lead exceeded the EPA RSL in groundwater samples SB-01 and SB-09 and lead exceeded its EPA RSL in groundwater sample SB-10. All other reported RCRA concentrations were below its EPA RSL for tap water.

SVOCs were reported in three of the groundwater samples collected. 1-Methylnaphthalene 2-methylnaphthalene, 2-methylphenol, 3 & 4 methylphenol, naphthalene, and phenol were reported in groundwater sample SB-04. 2-Methylphenol, 3 & 4 methylpheno,l and phenol were reported in groundwater samples SB-09 and SB-10. 1-Methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported above their EPA tap water RSLs.

No VOCs were detected in any of the groundwater samples collected.

The groundwater laboratory analytical report and COC are provided in Appendix E. Tables 2a through 2c summarize the groundwater analytical results.

5. FINDINGS AND CONCLUSIONS

During sample collection for SB-05, SB-06, SB-07, and SB-08, the presence of waste oil was visually confirmed in the soil samples collected (see Appendix B, Photograph 11). In addition, more than 2 inches of free product was detected by the oil-water interface probe in the temporary wells. The vertical thickness of the free product present could not be determined because the material would coat the sensor and prevent accurate reading (see Appendix B, Photograph 12 and 13).

Based on the analytical findings, several chemicals that were detected in the soil samples collected were above their respective EPA industrial RSLs. Arsenic was detected above its EPA RSL in soil boring SB-06. Arsenic and lead were also reported above their respective EPA screening levels in several groundwater samples collected.

It should be recognized that the results of this investigation are representative only of the locations sampled at the time of the investigation. These results are not necessarily representative of all areas of the subject site. These results do indicate an environmental impact to the groundwater at this site.

Based on review of the soil and groundwater chemical sampling results, Thompson believes that the site is environmentally impacted. Based on the results of the chemical sampling results, it is evident that the waste oil pit is still present. Based on the soils observed, there does not appear to be a cap on the waste oil pit and the extent of contamination is unknown. During the field work, building construction and debris materials were also found (see Appendix B, Photograph 14). This investigation was not part of an environmental response or ADEM required investigation.

The data presented is a summary of the results of samples collected on January 10 - January 11, 2024.

See Appendix A for complete analytical report.

(1) U.S. EPA Regional Screening Levels (RSLs) Summary Table November 2023, Industrial Soil.

ND indicates sample results were below detectable limits.

L1 indicates analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

L2 indicates analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

mg/kg indicates milligrams per kilogram.

Sent: Wednesday, October 10, 2001 3:39 PM
Subject: RE:

Mr. Walker,
I have a copy of the United States Army Corp of Engineers file on the Gulf Shipbuilding site because the Navy was involved in supervising the building of numerous naval and cargo vessels on the site during the WW II era. EPA is studying the formerly used defense sites along with the Corps of Engineers. The Corps of Engineers, however, found out the site was never owned by the Department of Defense. In reading over the file, a portion of the site was used as a sludge pit and environmentally may be important for EPA to investigate. My role, as a contractor of an independent environmental firm, is to initially study sites for EPA. I am trying to chase the paper trail via the internet rather than making a trip down to Mobile to research documents at a county land records office.

Does that answer your question? I can give you my contact at EPA, if that is what you are looking for?

Thank you for responding. I also hope you can get me in touch with the next link in the puzzle or even better, answer my question of what company utilized the property after Holter Marine and how is the property used today.

Ms Crean,
My name is Ford Walker. I am the past president of The Chickasaw Chamber of Commerce, and all the email for the Chamber still comes to me; we're a small community and we have no full time staff for the Chamber.

I think I might be able to help you. Could you tell me a little more about what you are trying to do? Do you have documentation regarding the study, etc.?

Ford Walker

Hello! I hope you can help me obtain some information concerning the old Gulf Shipbuilding location on Chickasaw Creek. I have been contracted by EPA to study this location. The last information I

have on the site documented the site as being sold to Morgan Stanley and Central States Southeast and Southwest Area Pension Fund for the Teamsters Union and leased to Halter Marine, Inc. which is a subsidiary of Friede Goldman Halter Company. Halter Marine, Inc. no longer leases the property but I don't know who does. I was hoping you could help me. Does any company occupy the site now?

I noticed that Mobile Pulley Marine Services Dry Dock Division is in the area. Do they occupy the old Gulf Shipbuilding location or are they at a different site? The phone number for Mobile Pulley Marine Services Dry Dock Division has been disconnected. The forwarding number for American Aeros Train (spelling??) did not have information except to say that the Mobile Pulley facility was laying off all its people.

Thank you for all your help. I can be reached at the number below if you need any other information. Mindy

DENFENSE ENVIRONMENTAL RESTORATION PROGRAM
FOR FORMERLY USED SITES
FINDINGS AND DETERMINATION OF ELIGIBIIITY
THE FORMER GULF SHIPBUILDING CORPORATION
MOBILE, ALABAMA
PROJECT NO. I04AL007400

FINDINGS OF FACT

1. The site, known as Gulf Shipbuilding Corporation, was also formerly known as the Chickasaw Shipyard. It is located on the west bank of Chickasaw Creek in the northeast section of the city of Mobile, just east and adjacent to the city of Chickasaw. The property consisted of about 120 acres.

2. The shipyard was established in 1917 and was bought and sold on several occasions before it was purchased by the Gulf Shipbuilding Corporation in 1940. During World War II it was involved in the war effort for the construction and repair of naval vessels.

3. The facility was a contract operation and was never under the use and ownership of the War Department, now known as the Department of Defense (DOD). Records do indicate that all work done in the shipyard under contract was supervised by naval officers or personnel of the Department of the Navy. The records indicate that the work performed for the Navy at this facility was let by competitive bid.

4. Following the War, the shipyard property was sold by Gulf Shipbuilding to the Morgan Stanley and Central States Southeast and Southwest Area Pension Fund (Teamsters Union), which is the current owner. The major portion of the land formerly encompassing the shipyard property is now leased by Halter Marine, Incorporated.

5. The remains of a surface oil pit exist on the property formerly owned by the Gulf Shipbuilding Corporation. The exact date of creation of the pit is unknown. The amount of material originating from DOD repairs, if any, and the date of the deposition of any of the material in the pit is also unknown. Substances which may have contained hazardous or toxic materials were deposited into this pit area, including waste oils and sludges from ships being repaired in the shipyard during the World War II era under contracts issued and supervised by a DOD agency. After the War, similar deposits and operations were made by others. Possible placement of toxic materials into this pit could contaminate the soils, seep into the groundwater, and eventually enter Chickasaw Creek, which is a distance of only about 100 feet from the pit location. Pollutants entering Chickasaw Creek would eventually find their way into Mobile River, Mobile Bay, and Mississippi Sound areas of the Gulf of Mexico.

PROJECT NO. I04AL007400

DETERMINATION

Based on the foregoing findings of fact, the site has been determined not to have been formerly used by DOD. Therefore, it is determined that an environmental restoration project is not an appropriate undertaking within the purview of the Defense Environmental Restoration Account, established under Public Law 99-190, for the reasons stated above.

DEFENSE ENVIRONMENTAL RESTORATION ACCOUNT (DERA)
DERA PROJECT NO. I04AL007400
THE FORMER GULF SHIPBUILDING CORPORATION
MOBILE, MOBILE COUNTY, ALABAMA

INVENTORY REPORT

Project Description

The site, known as Gulf Shipbuilding Corporation, was also formerly known as the Chickasaw Shipyard. It is located on the west bank of Chickasaw Creek in the northeast section of the City of Mobile, just east and adjacent to the City of Chickasaw. The property consisted of about 120 acres. See Appendix A for project site maps.

Survey investigations made on 20 May 1986, and subsequent discussions with the occupants of the property, revealed the presence of a small area on the property which had been used at sometime as a surface oil pit for the discharge of waste oils and residues from ships being repaired at the shipyard. This area appears to be a hazard, but no Department of Defense (DOD) involvement and responsibility for this area has been firmly established. Excluding this pit, no other evidence was found on the property of hazardous conditions, toxic wastes, debris, or ordnance problems which would possibly qualify for restoration under the DERA program.

For additional information, reference should be made to the Summary Sheet, the photographs, and the appendicies.

Former DOD Interest

The subject shipyard was established in 1917 and was bought and sold on several occasions before it was purchased by the Gulf Shipbuilding Corporation in 1940. During World War II it was involved in the war effort for the construction and repair of naval vessels.

Following archival research, it was determined that this facility was a contract operation and was never under the use and ownership of the War Department, now known as DOD. Records do indicate that all work done in the shipyard under contract was supervised by naval officers or personnel of the Department of the Navy. See Appendix C for the Records Search Report supporting this conclusion.

During and after World War II, it has been determined that a surface oil pit, approximately 200 feet wide by 300 feet long, of unknown depth, was used by Gulf Shipbuilding and others for the deposit of waste oil and sludge from vessels prior to their repair in the shipyard. Other substances, some of which may have been hazardous or toxic, could also have been placed into this pit during this same timeperiod. This period of use is established on the available aerial photography of the site showing the oil pit as it appeared in the 1940's and in the 1970's (See Appendix B). It is unknown whether the waste oil pit existed prior to the World War II shipbuilding efforts and Navy supervision of the site. It is possible that Gulf Shipbuilding or other former owners created this pit prior to any DOD repairs.

ENCL

During the site investigation, it was found that the pit had been filled and the contents had solidified into a substance with the consistency of asphalt. The surface of the site had the appearance of a dark sandy material caused by the mixing of the oil and sludge contents with the sand fill. Some 2 to 3 foot high perimeter dikes remained about the former pit site, and there were several piles of debris deposited within the area for the apparent purposes of disposal.

Post DOD Use/Interest/Control

Following the War, the shipyard property was sold by Gulf Shipbuilding to the Morgan Stanley and Central States Southeast and Southwest Area Pension Fund (Teamsters Union), which is the current owner. The major portion of the land formerly encompassing the shipyard property is now leased by Halter Marine, Inc.,. ? 1986

Policy Considerations

The remains of a surface oil pit exist on the property formerly owned by the Gulf Shipbuilding Corporation. The exact date of creation of the pit is unknown. The amount of material originating from DOD repairs, if any, and the date of the deposition of any of the material in the pit is also unknown. Substances, which may have contained hazardous or toxic materials, were deposited into this pit area, including waste oils and sludges from ships being repaired in the shipyard during the World War II era under contracts issued and supervised by a DOD agency. After the War, similar deposits and operations were made by others. Possible placement of toxic materials into this pit could contaminate the soils, seep into the groundwater, and eventually enter Chickasaw Creek, which is a distance of only about 100 feet from the pit location. Pollutants entering Chickasaw Creek would eventually find their way into Mobile River, Mobile Bay, and Mississippi Sound areas of the Gulf of Mexico.

Project Recommendation

Based on the foregoing information concerning the absence of DOD ownership of this site, either in fee or leasehold, a restoration project is not considered appropriate under the DERA program and does not qualify under Public Law 99-190, Section 8096.

SITE SURVEY SUMMARY
DEFENSE ENVIRONMENTAL RESTORATION ACCOUNT (DERA)
DERA PROJECT NO. I04AL007400
THE FORMER GULF SHIPBUILDING CORPORATION
MOBILE, MOBILE COUNTY, ALABAMA

1986

1. Site Name The Gulf Shipbuilding Corporation Property, now owned by the Morgan Stanley and Central States Southeast and Southwest Area Pension Fund (Teamsters Union), was never a Department of Defense (DOD) facility. See Appendix C.

2. Location Mobile, Mobile County, Alabama. See Appendix A.

3. Description of Problem A waste oil pit was created on the property.

4. Site History The property was a contract operation which built and repaired ships for the War Department during World War II. The United States did not own, lease, or occupy the property. However, Naval personnel on site did supervise the shipbuilding operation.

5. Available Studies and Reports The owners will make available the ? drawings and documents that they have regarding their property.

6. Category of Hazards Waste oils and sludges deposited into the pit may have contained hazardous wastes or toxic materials.

7. Basis of DOD Responsibility None.

8. POC/District Doug Parker, FTS 537-2720 OR 205-690-2720, Mobile District.

9. Status Site survey and evaluation are complete.

10. Description of Proposed Remedial Action None.

11. Estimated Costs Total Implementation Costs None.

Contact/Ph: Buchanan, Dick 334-433-9567

FINDINGS:
While jetting a hole for construction purposes Jordan Pile Driving Co. hit a buried object, of unknown origin, containing an unknown petroleum product. A large amount of the dark black substance was srayed over an area of around 1000 square feet. Alabama Power initiated immediate clean up of the oil-like substance on the surface. Seven roll-offs of about 20 cubic yard capacity each, were filled with contaminated material. No other estimation of volume was done. Alabama Power personnel took samples of contaminated materials. I referred the incident to the UST Branch, and the Groundwater Branch in Montgomery. Related memos are attached.

July 24, 1995

TO: Rita Nichols
RCRA Compliance Branch
Land Division

FROM: Timothy A. Young
Hydrogeologist
UST Corrective Action Unit

Subject: Request for RCRA Services

The UST Corrective Action Unit requests that the RCRA Compliance Branch review the facility file on the above referenced site.

On 05/19/95, the Department received a telephone call from the ADEM Field Office in Mobile (from Mr. Clancy Willis).

> Briefly, while the Alabama Power Company was drilling a hole to install a power pole (on the property of Buchanan Lumber), an oily appearing product was observed in the water filled drilling pit.

The source container of the release (i.e. abandoned UST, drum, pipeline, etc.) could not be located. Apparently the drilling auger completely collapsed the source container (if there ever was one). Probing failed to located the source structure -partially due to the presence of a high groundwater table at this site.

> Groundwater is located about 2' below level surface at this site. There are several thousand gallons of water in the pit at this moment.

While a small amount (probably a lot less than 25 gallons) of free product was initially evidenced in the pit, following overexcavation, no additional free product has been evidensed.

During May 1995, soil samples were taken from 2 of the seven roll-off and groundwater samples were taken from the excavated pit.

1. Soil Samples:

   a. TCLP samples seem less than CALs.
   b. PCB samples were 45 ppm and 02 ppm.
   c. TPH samples were 320,000 ppm and 8800 ppm.

As per Alabama Power (Mr. John Grogan & Mike Godfried), only roll-off containers -1 & -2 were samples because they were the containers most likely to evidence contamination.

The POC for Alabama Power is Ms. Gwen Taylor @ 205-250-3667. She has requested that the Department review this site as quickly as possible so that the approximately 210 cyds of stockpiled soil can be disposed of and so that they can proceed with the Power Pole installation at this site.

2. Groundwater Samples:

   a. BETX results were all less than CALs.
   b. PAH results were all BDL --except 1-methylnaphthalene= 12 ppb (cresote breakdown product?)
   c. Lead results= 9 ppb.
   d. Oil & Grease= 7 ppm.

Due to the evidence of PCB contamination -and the lack of evidence of an Underground Storage Tank (UST), the UST corrective action unit does not seem to have the necessary authority to manage this site.

It is requested that the RCRA Compliance Branch review this site to determine what (if any) additional corrective action will be required for this site.

Should there be any questions regarding this matter, please contact me at (334) 270-5619 between the hours of 1:00 PM and 5:00 PM.

MEMORANDUM

TO: Timothy A. Young
Hydrogeologist
UST Corrective Action Unit

THROUGH: Bob Barr, Chief
Southern Section
RCRA Compliance Branch
Land Division

FROM: Michael B. Jones
RCRA Compliance Branch
Land Division

RE: PCB contaminated Soil
Buchanan Lumber Co. Property - Chickasaw, Alabama

Personnel with the RCRA Compliance Branch have reviewed the above referenced information dated June 14, 1995, along with your memo dated July 24, 1995. Based on the submitted information it appears that the source concentration of the PCBs (as best can be determined) is less than 50 PPM and, therefore, is not regulated by 40 CFR Part 761 for purposes of disposal. Mr. Mark Bloeth with EPA Region IV's Toxics Unit was contacted regarding this site, and he concurred with the above recommendation. In addition, it is recommended that the disposal of the PCB contaminated soil be coordinated through the Solid Waste Branch.

Also, a review of the attached analysis of the contaminant revealed no TC constituents above the regulatory threshold, and the material appears to be non-hazardous as defined by RCRA.

It is my understanding that Alabama Power Company has ceased construction activity at this site pending a response from this Department. Personnel with the RCRA Compliance Branch see no reason for delaying this construction project based on the submitted information as it relates to 40 CFR part 761 or Division 14 Hazardous Waste Program. The Groundwater Branch may be interested in the elevated TPH levels found in the excavated pit.

UST Corrective Action Unit

RE: **SITE HISTORY MEMORANDUM**
Buchanan Lumber Mobile, Inc.
Vaiduct Road
Chickasaw, Mobile County, Alabama

TO THE RECORD:

The UST Corrective Action Unit requests that the Hydrogeologic Unit review the facility file on the above referenced site.

Listed below is the site history which briefly recounts the recent release at this facility.

1. Site History:

   a. 05/19/95: The Department received a telephone call from the ADEM Field Office in Mobile (from Mr. Brad Gane). Briefly, while the Alabama Power Company was drilling a hole to install a power pole (on the property of Buchanan Lumber), an oily appearing product was observed in the water filled drilling pit.

      This site has a very high water table; the water table is about 2' or 3' BLS. This site also has minor topographic relief and is relatively close to Chickasaw Bogue Creek (which is within 200' of the incident location).

   b. 05/22/95: The Department received a follow-up call from the Mobile Office stating that following the initial release, no additional free product has been observed in the power pole pit. The pit contains several thousand gallons of water. The initial release is estimated to be a lot less than 25 gallons.

      The source container of the release (i.e. abandoned UST, drum, pipeline, etc.) could not be located. Apparently the drilling auger completely collapsed the source container (if there ever was one). Probing failed to located the source structure.

   c. 06/01/95: The Department received a call from Mr. Buchanan. He states that the pit is filled with water (to within about 2' from level surface) and wants to know if Department requires that this pit be kept drained.

      The Department states that as long a free product is not evidenced, pumping this pit dry would not be required (at this time). Due to the high water table and the obvious fast groundwater recharge situation at this site, the pit would be likely to immediately refill with water.

d. 06/14/95: The Department received sampling data on this site:

i. 05/22/95: Soil samples were taken from two of the 7 roll-off containers.

a. TCLP samples seem less than CALs.
b. PCB samples were 45 ppm and 02 ppm.
c. TPH samples were 320,000 ppm and 8800 ppm.

As per Alabama Power (Mr. John Grogan & Mike Godfried), only roll-off containers -1 & -2 were samples because they were the containers most likely to evidence contamination.
AL PWR: Proj manager: MS. Gwen Taylor 205250366

ii. 05/22/95: A groundwater sample was taken of the pit water.

a. BETX results were all less than CALs.
b. PAH results were all BDL --except 1-methylnaphthalene- 12 ppb (cresote breakdown product?)
c. Lead results= 9 ppb.
d. Oil & Grease= 7 ppm.

e. 07/17/95: On this date, I talked with Mr. Mike Jones (ADEM's PCB authority @ 270-7989). He stated that the 45 ppm concentration for PCBs was a cause of concern and that EPA might need to be contacted on this matter if additional guidance is needed (ATTN: Mr. Mark Bloeth @ 404-347-1033).

Mr. Jones was to call me back on this matter. As of 07/21/95, no return call has been received.

As per guidance from my supervisor, the UST corrective action unit does not seem to have the necessary authority to manage this site. It is requested that the Hydrogeologic Unit review this site to determine what (if any) additional corrective action will be required for this site.

The POC for Alabama Power is Ms. Gwen Taylor @ 205-250-3667. She has requested that the Department review this site as quickly as possible so that:

a. The approximately 210 cyds of stockpiled soil can be disposed of, and
b. So that they can proceed with the Power Pole installation at this site.

End of memorandum...

EXECUTIVE SUMMARY

LaBella Associates, D.P.C. (LaBella) has been contracted by Zarzour Companies to perform a Phase I Environmental Site Assessment (ESA) report for the Chickasaw Marine Terminal property, 150 Viaduct Road, Chickasaw, Mobile County, AL (hereinafter referred to as the "Subject Property").

This assessment was prepared according to the ASTM E1527-21 as a portion of the User's requirements in the All Appropriate Inquiries process and to satisfy the due diligence requirements set for Zarzour Companies.

The Subject Property is further described as follows:

Subject Property Name	Chickasaw Marine Terminal
Subject Property Address	150 Viaduct Road, Chickasaw, Mobile County, AL
Subject Property Acreage (approximate)	15.42
Parcel ID(s)	2208440001001.000; 2208440001006.000; 2208440001005.003; and 2208440001005.004
Current Owner	Buchanan Lumber Mobile Inc
Current Subject Property Use/ Development	Site reconnaissance occurred March 6, 2024. At the time of the reconnaissance, the property did not appear to have any current operations. Roughly 5.90 acres of undeveloped land located in the southwestern corner was recently used for the storage of shipping containers. Directly across in the southeastern portion of the site is a corrugated metal building approximately 33,000 square feet, constructed in 1998. The two-story building is utilized for office space, a machine shop, and contains a former lumber warehouse. North of the Office Building is the Main Building, which is approximately 50,800 square feet, and was constructed in 1971. It is also corrugated metal and was mostly empty during site reconnaissance. The northernmost building (Northern Building) was constructed in 1995 and is approximately 15,000 square feet.
Public Thoroughfares and Access/Egress	Entry to property is through Viaduct Road. The property can also be accessed by Chickasaw Creek. The northwestern to eastern portion of the property contains rail tracks that appear to be a part of the Terminal Railway Alabama State Docks (TASD).

Exterior Areas	Alabama Power transmission spans through the property. Cracked concrete was observed throughout the property, along with staining present in former AST area. There were several areas where there was presumably subsidence under the concrete that caused cracks and sunken areas that had to be covered by steel plates. Several barges were present along the Chickasaw Creek property border (eastern portion),
Surrounding Area	Suburban
Subject Property Utilities	
Electric Source	Alabama Power
Natural Gas Source (if provided)	Spire
Potable Water Source	Prichard Water
Sanitary Wastewater Disposal	City of Chickasaw
Non-Sanitary Wastewater Disposal	No non-sanitary wastewater is generated

Observations made by LaBella during the site reconnaissance identified the following features indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property:

- A number of drums, buckets, containers on the property in various conditions. Leaks and stains associated with these are apparent.
- Heavy staining was observed near a concrete secondary containment area of the machine shop. ASTs were not currently on the property; however, this is the presumed source of the staining, and is indicative of a release.
- Significant staining and evidence of a partial cleanup attempt near the floor drains in the Main Building.
- The former machine shop attached to the Office Building.

Based on LaBella's review of historical information, the adjacent properties were historically industrial purposes. The following adjacent property uses of potential concern were identified:

- North/northwestern property use as an oil refinery and shipbuilding facility.

LaBella's historical research identified the following conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property:

- Historic ASTs with release in the concrete secondary containment area.
- Gulf Shipbuilding Corporation waste oil pit.
- Subject Property use a shipping service (lumber, shipping containers, etc.).

- The north/ northwestern adjacent properties use as an oil refinery and historical use as a shipbuilding facility.

LaBella's review of regulatory information did not identify conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property, with the exception of the 1995 release incident, which can be found in Appendix D of Thompson's report in Previous Reports.

The 1995 incident occurred during APCO work on the subject property where a dark, black liquid was sprayed over approximately 1,000 square feet during excavation. The source of the release was not identified. ADEM records indicated that UST Branch did not have the authority to manage the site and referred it to both the RCRA Compliance Branch and the Hydrogeologic Unit, RCRA Compliance Branch determined the concentrations of PCBs appeared to be nonhazardous and referred to the Groundwater Branch for TPH Levels. APCO removed approximately seven 20 cubic yard roll offs of contaminated soils. No other information was available.

Time Period	Apparent Use/Development
Early 1940s until at least 1970	Wooded undeveloped on the western side of the property. Gulf Shipbuilding Corporation operated a shipbuilding facility west of here and commercial operations extended onto the site. Staging area, cargo boxes, and what appeared to be a 200' x 300' waste oil pit was observed on site near Chickasaw Creek on the eastern portion of the property. It is thought that this was utilized to dispose of waste oil, sludges, and potentially other hazardous chemicals from their operations.
1971	According to tax records, the Main Building was constructed in 1971. The property had what appears to be storage containers on site.
1995	The Northern Warehouse was constructed. Not much change according to aerial photography. APCO constructs transmission tower and a dark, black substance sprayed over the area of approximately 1,000-square feet. Resulted in a cleanup of the spill and an ADEM investigation was conducted. More in Regulatory Information Appendix.
1997-2006	The Office Building was constructed. An excavation was apparent near the area of the former oil pit in 1997 and was not apparent in subsequent photographs. The southwestern portion of the property is apparently utilized as a shipping container staging area.
Approximately 2010 until present	The property operated as Crimson Shipping.

Based on the results of this assessment, the following RECs have been identified in connection with the Subject Property:

- Staining in the secondary containment area from the removal of historic ASTs.
- Potentially hazardous material in corroded, unlabeled containers, buckets, and drums across property with evidence of release.
- The presence of an approximately 200' x 300' waste oil pit located on the eastern central portion of the Site while in use by Gulf Shipbuilding Corp. The pit was used for the disposal of waste oil, sludges, and potentially hazardous chemicals.
- An incident occuring in 1995 on the Subject Property identified PCB contaminated soils. APCO removed seven 20 cubic yard roll-offs of PCB containing soil from the site. PCB contaminated soil and/or groundwater may still be present on-site.
- The 1995 incident also identified a dark black liquid that sprayed from the ground during APCO on-site work and covered over 1,000-square feet. The source of this release was never identified.
- Environmental impacts to soil and groundwater were noted within a Phase II ESA from February 2024 completed for the Subject Property.
- Free product was noted within soil borings SB-05 through SB-08 installed on-site during the February 2024 Phase II ESA. Soil borings SB-06, SB-07, and SB-08 were within the former waste oil pit area.
- The Main Building contains floor drains within the building with obvious staining around the floor drains. The integrity of the drain system is unknown and could be a source of release beneath the building.
- The management practices of petroleum products and hazardous chemicals of historical owners and operations is unknown.
- An oil refinery adjoins the subject property to north/northwest and has operated for approximately 50 years and is located hydrogeologically upgradient. This property operated as a shipbuilding facility prior to operating as an oil refinery.

Based on the results of this assessment, no CRECs have been identified in connection with the Subject Property.

Based on the results of this assessment, no HRECs have been identified in connection with the Subject Property.

Based on the results of this assessment, no de minimis conditions have been identified in connection with the Subject Property.

Based on the results of this assessment, no significant data gaps have been identified in connection with the Subject Property.

Based on the findings of this assessment, LaBella is of the opinion that additional investigation of the Subject Property is warranted.

1.0 INTRODUCTION

LaBella has been contracted by Zarzour Companies to perform a Phase I Environmental Site Assessment report for the Chickasaw Marine Terminal property, 150 Viaduct Road, Chickasaw, Mobile County, AL.

The findings of this report are based upon an assessment of the condition of the Subject Property within the Scope of Work and objective described below as of the date of the site observations and documentation review. This assessment was prepared according to the ASTM Standard Practices E1527-21 as a portion of the User's requirements in the All Appropriate Inquiries process and to satisfy the due diligence requirements set for Zarzour Companies. The information contained in this report is considered privileged and confidential and is intended solely for the use of the parties identified in Section 1.5.

1.1 Purpose

This investigation was requested to identify, to the extent feasible, RECs in connection with the Subject Property, including the identification of conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, or in the vicinity of the Subject Property. This Phase I ESA report was conducted in conformance with the Scope and Limitations of ASTM Standard Practice E1527-21.

The performance of ASTM Standard Practices E1527-21 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs and the potential liability for contamination to be present in connection with the Subject Property recognizing reasonable limits of time and cost. It is also intended to satisfy one of the requirements to satisfy "all appropriate inquiry" as defined by 42 U.S.C §9601(35)(B), for the purposes of qualifying for innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA Liability. The User should understand that this practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for landowner liability protections; including (1) the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, (2) the duty to take reasonable steps to prevent releases, or (3) the duty to comply with legally required release reporting obligations.

The objective of this Phase I ESA was to determine the following, using our professional judgment, by means of the Scope of Work hereafter described:

1. A general description of the Subject Property.
2. The current and historical usage of the Subject Property and adjoining properties.
3. Whether RECs exist or have the potential to exist in, on, or at the Subject Property.
4. Whether Subject Property conditions suggest further evaluation based on the presence or probable presence of RECs.

5. Provide information which may assist the Client in evaluating the fair market value of the Subject Property.

A REC is defined by ASTM as (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.

A Controlled REC is defined by ASTM as a recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).

A Historical REC is defined by ASTM as a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

A de minimis condition is defined by ASTM as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

The term “data gap” means a lack of or inability to obtain information required by this practice despite good faith efforts by the Environmental Professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.). A significant data gap is one that affects the ability of the environmental professional to identify a REC.

The term "data failure" means the failure to achieve the historical research objective as specified in ASTM E-1527-21 even after reviewing the standard historical resources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

Migration refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

An Environmental Professional is a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors defined in the ASTM Standard Practice E1527-21 and §312.20 of 40 CFR §312. Specifically, an Environmental Professional is defined as a person having one of the following qualifications: (1) A state- or tribal-issued certification or license and three years of relevant, full-time work experience; (2) A bachelor's degree or higher in science or engineering and five years of relevant, full-time work experience; or, (3) 10 years of relevant, full-time work experience.

The date of first research illustrates the earliest date that information was collected for the purposes of this assessment. Under ASTM E1527-21, the report is presumed to be viable when conducted within 180 days prior to the date of acquisition of the Subject Property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The following components must be conducted or updated within 180 days prior to the date of acquisition or transaction:

1. Interviews with owners, operators, and occupants;
2. Searches for recorded environmental cleanup liens (a *user* responsibility);
3. Reviews of federal, tribal, state, and local government records;
4. Visual inspections of the Subject Property and of adjoining properties; and
5. The declaration by the Environmental Professional responsible for the assessment or update.

The date of first research for the above components was 3/6/2024.

1.2 Scope of Work

This Phase I Environmental Site Assessment has been prepared in accordance with ASTM E1527-21, which has been devised to address the site assessment portion for 40 CFR 312 - Innocent Landowners, Standards for Conducting All Appropriate Inquiries. The Scope of Work performed in this assessment is intended to identify RECs, CRECs, HRECs, de minimis conditions, and Significant Data Gaps through the following tasks:

1. Review of information provided by the User related to environmental cleanup liens; specialized knowledge or experience regarding the Subject Property; the relationship of the purchase price to the fair market value of the property, if the property were not contaminated; and, commonly known or reasonably available information about the Subject Property.
2. Review of local, state, and federal environmental records.
3. Review of historical sources of information to identify the use of the Subject Property dating back to 1940 or first Subject Property development, whichever is earlier.
4. Review of physical and geological settings.
5. Interviews with current and past owners, operators, and occupants to evaluate the potential for environmental contamination to be present at the Subject Property.

6. Inspection of the Subject Property and adjacent properties, to visually identify areas of concern. Adjacent properties were inspected from public roadways and the Subject Property boundaries to the extent possible.
7. The preparation of this report documenting all appropriate inquiries.

The work for this report has been performed in accordance with generally accepted environmental engineering practices for this region. The findings of this report are based upon the opinion and judgment of an Environmental Professional and are dependent upon LaBella's knowledge, the information supplied during the interviews, and data and information solicited from governmental agencies. LaBella makes no other warranty or representation, either expressed or implied, nor is one intended to be included as part of its services, proposals, contracts, or reports.

In addition, LaBella cannot provide guarantees, certifications, or warranties that the Subject Property is or is not free of contamination without a subsurface investigation involving drilling, vapor analysis, laboratory soil analysis, groundwater monitoring well installation, and laboratory groundwater analysis. Even with such a program, the data and samples from any given soil boring or monitoring well will indicate conditions that apply only at that particular location, and such conditions may not necessarily apply to the general Subject Property as a whole.

1.2.1 Significant Assumptions

Significant assumptions made in the performance of this Phase I ESA are as follows:

- Regional groundwater flow follows major topographic gradients.
- Representations made during interviews are accurate.

1.3 Data Gaps

LaBella encountered the following data gaps through the completion of this Phase I Environmental Site Assessment:

Nature of Data Gap	Details/Description	Data Sources Consulted
Limitations to site reconnaissance[1]	At the time of the site reconnaissance, a representative portion of the office, machine shop, and warehouse spaces were visually inspected. It should be noted that LaBella did not observe the top story of the office area.	N/A; refer to Section 4.0 for site reconnaissance methodology.
Historical Use	Fire Insurance Maps (FIM) or Sanborn Maps were unavailable for the area.	Historical sources from EDR
Interviews	LaBella has not been able to contact historical owners, operators, or City representatives.	LaBella consulted current owners, municipal, and/or User-provided records to identify historical ownership information and completed a focused online search in an attempt to obtain contact information.
Any significant data gaps (a data gap that affects the ability of the environmental professional to identify a REC) are discussed within the Findings and Opinions section of this report. [1] See Limitations and Exceptions of Assessment below for additional limitations of the site visit.		

1.4 Limitations and Exceptions of Assessment

ASTM E1527-21 expressly recognized the fact that no ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. LaBella's work is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Subject Property, and its Scope of Work reflects recognition of the reasonable limits of time and cost.

The work for this report has been performed in accordance with the agreement signed with Zarzour Companies. The conclusions of this report are based upon LaBella's opinion and judgment and are necessarily dependent on information supplied by the individuals, entities, and agencies contacted through the course of this assessment. LaBella makes no other warranty or representation, either expressed or implied, nor is one intended to be included as part of its services, proposals, contracts, or reports.

The actual presence of asbestos, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, endangered species, indoor air quality, mold, substances not defined as hazardous substances, cultural and historical resources, archeological resources, ecological resources, industrial hygiene, health and safety, biological agents, and/or high voltage power lines, are not included in the Scope of Work of this assessment unless agreed to by Zarzour Companies and LaBella; in such a case, these additional services/ASTM Non-Scope Considerations are discussed in Section 8.0 below. Should Zarzour Companies desire any of these additional services, such can be completed by LaBella under separate cover; however, they are not included in the Scope of Work of the Phase I ESA.

The site reconnaissance was limited to visual observations of accessible areas only. No attempt was made to observe conditions in spaces not generally accessible, including but not limited to:

1. Entering crawlspaces and attics
2. Walking on roofs
3. Viewing the interior of pipe chases or plenum
4. Viewing spaces concealed by walls, floors, ceilings, interior finishes, etc.
5. Viewing areas inaccessible due to topographic features or locked doors, obscured by snow cover, vegetative growth, vehicles, etc.

The site reconnaissance was also limited to visual observations within the perimeter of the Subject Property and other accessible areas only. At the time of the site reconnaissance, a representative portion of the Subject Property and common areas were visually inspected.

1.5 Reliance

Zarzour Companies may rely upon the findings of this report and should be aware of the agreed upon Scope of Work and the limitations associated with this Scope of Work.

2.0 SUBJECT PROPERTY AND VICINITY DESCRIPTION

The Subject Property is summarized in the tables below. Property boundaries for the purpose of this assessment were determined based on provided survey mapping and/or tax maps obtained through municipal sources. Subject Property Location and Tax Parcel maps for the Subject Property are located in the Site Maps Appendix.

Subject Property Name	Chickasaw Marine Terminal
Subject Property Address	150 Viaduct Road, Chickasaw, Mobile County, AL
Subject Property Acreage (approximate)	15.42
Parcel ID(s)	2208440001001.000; 2208440001006.000; 2208440001005.003; and 2208440001005.004
Current Owner	Buchanan Lumber Mobile Inc
Current Subject Property Use/ Development	Site reconnaissance occurred March 6, 2024. At the time of the reconnaissance, the property did not appear to have any current operations. Roughly 5.90 acres of undeveloped land located in the southwestern corner was recently used for the storage of shipping containers. Directly across in the southeastern portion of the site is a corrugated metal building approximately 33,000 square feet, constructed in 1998. The two-story building is utilized for office space, a machine shop, and contains a former lumber warehouse. North of the Office Building is the Main Building, which is approximately 50,800 square feet, and was constructed in 1971. It is also corrugated metal and was mostly empty during site reconnaissance. The northernmost building (Northern Building) was constructed in 1995 and is approximately 15,000 square feet.
Public Thoroughfares and Access/Egress	Entry to property is through Viaduct Road. The property can also be accessed by Chickasaw Creek. The northwestern to eastern portion of the property contains rail tracks that appear to be a part of the Terminal Railway Alabama State Docks (TASD).
Exterior Areas	Alabama Power transmission spans through the property. Cracked concrete was observed throughout the property, along with staining present in former AST area. There were several areas where there was

	presumably subsidence under the concrete that caused cracks and sunken areas that had to be covered by steel plates. Several barges were present along the Chickasaw Creek property border (eastern portion),
Surrounding Area	Suburban
Subject Property Utilities	
Electric Source	Alabama Power
Natural Gas Source (if provided)	Spire
Potable Water Source	Prichard Water
Sanitary Wastewater Disposal	City of Chickasaw
Non-Sanitary Wastewater Disposal	No non-sanitary wastewater is generated

2.1 Building Summary

Structure(s) located on the Subject Property are summarized in the following table:

Building Name	Date of Construction	Square Footage	No. of Stories	Foundation Type	Heating and Cooling Source	Current Use/ Description
Office Building	1998	30,000	2	Concrete Slab	NA	Large, corrugated metal building with damage to exterior. Northwestern portion of the building is a 2-story office area.
Main Building	1971	50,800	1	Concrete Slab	NA	Large, one-story corrugated metal buildings with damage to exterior. Building was mostly empty.
Northern Building	1995	15,000	1	Concrete Slab	NA	Medium, one-story corrugated metal building with damage to exterior.

2.2 Physical and Hydrogeological Setting

Based on a review of provided records, the following information was obtained regarding the physical and hydrogeological setting of the Subject Property:

Topography	The subject property is generally level at grade.
Elevation (feet above mean sea level)	30 feet
Subject Property Water Bodies	None
Nearest Water Body	Chickasaw Creek borders the subject property to the east
Apparent Groundwater Flow in Surrounding Area	Apparent groundwater flow is North/Northeast
Soil Map Unit(s)	Urban land-anthroportic udorthents complex (ULl), 0 to 8 percent slopes, industrial; Psamments and Anthroportic Udorthents (PU), loamy, 0 to 15 percent slopes
Geological Information	East Gulf Coastal Plain, Deltaic Plain, The East Gulf Coastal Plain physiographic section of the Coastal Plain province in Alabama is an area of Mesozoic and Cenozoic sediments in the southern and western parts of the state, where mostly unconsolidated sediments of the Coastal Plain overlap consolidated rocks of the Plateaus, Valley and Ridge, and Piedmont provinces. In northwestern Alabama, Coastal Plain sediments are up to 1,000 feet thick and cap hills and plateau remnants of Paleozoic rock. The sediments thicken rapidly to the south and are more than 24,000 feet thick near the coast. Most of the Coastal Plain is low to moderate relief, and the topography is gentler than that of the other regions, although stream valleys may have greater relief. Resistant beds in some areas form broadly arcuate cuestas 50 to 200 feet above the surrounding prairie in parts of central Alabama. More information can be found in the Hydrogeologic Information Appendix.
Anticipated Depth to Bedrock (feet)	(ULl)- more than 6.7 feet (PU)-more than 6.7 feet
Anticipated Depth to Groundwater (feet)	(ULl)- 3.25 feet - 4.25 feet (PU)- 3.25 feet - 6 feet

Refer to Figure 1 for a copy of the Subject Property Location/Topographic Map. Refer to Figure 2 for Site Layout. Summaries from the USDA Web Soil Survey are included in the Hydrogeologic

Information Appendix. Groundwater flow was determined based on interpretation of the USGS topographic map and/or provided previous studies.

3.0 USER-PROVIDED INFORMATION

In accordance with the ASTM E1527-21, a "User" is defined as the party seeking to complete an environmental site assessment of the property. If the user is aware of any specialized knowledge or experience that is material to RECs in connection with the Subject Property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the Environmental Professional. The User Questionnaire was completed by Mr. Matt Zarzour with Zarzour Companies, LLC and can be found in the User Provided Information appendix.

During Site Reconnaissance, Mr. Ryan Zarzour was interviewed by Mr. Trey Helms and Mr. Robert Bailey of LaBella Associates. Mr. Zarzour was aware of a potential release incident during a drilling operation for a new power pole location. He was unaware of any hazardous material storage, but he knew of a historic AST on the Subject Property. Mr. Zarzour stated there has been very little activity/ business on the Subject Property in the last eight months.

3.1 Reason For Performing Phase I ESA

According to ASTM 1527-21, either the User shall make known to the Environmental Professional the reason why the User wants to have the Phase I ESA performed or, if the User does not identify the purpose of the Phase I ESA, the Environmental Professional shall assume the purpose is to qualify for the Landowner Liability Protections under the Brownfields Amendments. The User indicated that the Phase I ESA is being conducted as part of due diligence activities associated with a potential purchase.

4.0 SITE RECONNAISSANCE

LaBella conducted a site reconnaissance of the Subject Property as well as observations of adjacent properties as viewed from the Subject Property boundaries and public roadways to the extent possible, to visually identify areas of concern. The site reconnaissance was conducted on 3/6/2024 by Trey Helms and Robert Bailey, with LaBella.

LaBella was accompanied by Ryan Zarzour, Principal, at Zarzour Companies.

Observations discussed in this Section are noted on Figure 2. Copies of the field notes taken during the site reconnaissance are included in the Site Reconnaissance Field Notes Appendix. Representative photographs of the Subject Property at the time of the site reconnaissance are included in the Site Photographs Appendix.

At the time of the site reconnaissance, the office area, machine shops, and warehouses were visually inspected. It should be noted that LaBella did not access the 2nd floor of the office. Additional site visit limitations are discussed in Section 1.4.

Past Uses of Subject Property

Evidence of historical shipping operations were noted at the time of the site reconnaissance, including several barges and shipping container staging areas and warehouses.

Hazardous Substances and Petroleum Products

Approximately ten 55-gallon drums were observed on the property. The Office building contained a full, 55-gallon drum, and according to the label the drum contains industrial hydraulic fluid. Staining was present around the drums. Several containers, under five gallons, possibly containing motor oil, two 5-gallon buckets containing products and a slightly smaller, corroded pail with staining on a pallet, batteries, a Lincoln Electric arc welder, a sump, and floor drains were observed on the property. Concrete staining present was dark black in color, and there was some evidence of cleanup in areas. A concrete secondary containment area was viewed near the machine shop. This area historically contained five ASTs. There was heavy staining in the containment area, along the concrete borders, and in the vegetation near the fence line. There is no vegetation in the release area, and the vegetation immediately around the release appears black in color.

Unidentified Substance Containers

There were two unidentified substance containers (one 55-gallon drum and a corroded pail) observed at the time of the site reconnaissance.

Storage Tanks

No apparent indications of underground storage tanks (e.g., fill ports, vent pipes, access ways, etc.) were observed at the Subject Property at the time of the site visit. As mentioned above, there was evidence of historic ASTs.

Solid, Hazardous, and/or Regulated Wastes

In the machine shop of the Office Building, there is a blue plastic drum which appears to have stored the pumped contents from the sump. It is unclear what was in the contents of the sump; however, there is visible staining around the container.

Fill Material

No evidence of fill material was observed during the site visit.

Odors

No apparent strong, pungent, or noxious odors were observed at the Subject Property at the time of the site reconnaissance.

Standing Water/Pools of Liquid

Several apparent pools of water were observed at the Subject Property in the warehouse spaces at the time of the site reconnaissance. It is unclear if the pools were related to a release or from rainwater.

PCB-Containing Equipment

Two poles containing three transformers each was observed at the time of the site reconnaissance. There was no evidence of a release and the transformers appeared to be new.

Potential PCB-Containing Equipment	Location	Evidence of Leaks
Pole-mounted transformers	Southwestern corner of property and west central portion of property.	No evidence of a release from this equipment was observed.

Stains and Corrosion

The following areas of staining and/or corrosion were identified at the time of the site reconnaissance:

- Office Building- Machine Shop- heavy oil staining with evidence of some cleanup related activities; Two blue drums with corroded tops and bottoms containing Proteck Tacky Red, grease were observed; however, no visible staining was present at the time of the site visit.
    - Concrete Secondary Containment- heavy staining, presumably from historic ASTs.
- Main Building- Staining/wetness was observed around an empty, unlabeled 55-gallon drum
    - 2 floor drains- staining and evidence of cleanup activities.
    - ~3.5-gallon pail- corroded and appear to have stained the wooden pallet.

Stressed Vegetation

The following areas of stressed vegetation were identified at the time of the site reconnaissance:

- Concrete Secondary Containment- visible release in vegetated area, no vegetation in the direct release, vegetation immediately around area of release appears black.
- Transmission Line Tower areas- Vegetation around these areas appear dead and could be related to possible Right of Way Management herbicides.

Drains and Sumps

A sump is located in the Office Building within the machine shop area. It is unclear to where the sump drains. LaBella observed a plastic, blue drum that appears to be used to store the liquids that are pumped out of the sump area. There is a relatively large stain near the blue drum.

Two floor drains were observed in the Main Building. There was staining and evidence of a cleanup near the drains.

Wastewater

Non-sanitary wastewater does not appear to be generated or discharged at the Subject Property.

Septic Systems and/or Cesspools

No apparent indications of septic systems or cesspools were observed at the time of the site reconnaissance or are reported to be located on the Subject Property.

Wells

No apparent potable, monitoring, irrigation, dry, or injection wells were observed at the time of the site reconnaissance or are reported to be located on the Subject Property.

Additional Information

In addition to the information summarized above, LaBella identified at the time of the site reconnaissance an unknown hole covered with two steel plates near the transmission line tower area on the eastern portion of the property. This is presumably due to subsidence beneath the concrete, causing sections of concrete to sink.

Adjacent Property Use

The Subject Property is bordered by the following properties:

Direction	Current Use/Occupant and Address (if Determinable)	Apparent Past Use	Potential Concerns Visible During Site Visit
North/ Northwest	Center Point Terminal Chickasaw, 200 Viaduct Road, Delta Marine Services, 750 Viaduct Road	Gulf Atlantic Operations, LLC, Mobile Chickasaw Facility, Inc., Coastal Mobile Refining Co., Texas Pipe, Apex Oil	NA
East	Chickasaw Creek	NA	NA
South	Chickasaw Marine Services, 50 Viaduct Road; Walter Energy (Restricted Area)	Warrior & Gulf Navigation	Possible tanker boat filling area.
West	Zenith Energy-Chickasaw Terminal, 500 Viaduct Road		

4.1 Site Reconnaissance Summary of Findings

Observations made by LaBella during the site reconnaissance identified the following features indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property:

- A number of drums, buckets, containers on the property in various conditions. Leaks and stains associated with these are apparent.
- Heavy staining was observed near a concrete secondary containment area of the machine shop. ASTs were not currently on the property; however, this is the presumed source of the staining, and is indicative of a release.
- Significant staining and evidence of a partial cleanup attempt near the floor drains in the Main Building.

- The former machine shop attached to the Office Building.

5.0 SUBJECT PROPERTY HISTORY AND USE

LaBella attempted to review reasonably ascertainable and readily available standard sources of historical information as defined by the ASTM E1527-21 in order to identify all obvious uses of the Subject Property back to the first developed use or 1940, whichever is earlier (i.e., the historical research objective according to ASTM). Uses of the properties adjacent to the Subject Property are identified in this report only to the extent that this information was revealed in the course of researching the Subject Property itself and were determined at the discretion of the Environmental Professional. As such, LaBella reviewed only as many of these sources as necessary to achieve the historical research objective. Data failures and data gaps are identified, defined, and evaluated for their significance in Section 1.3 of this report.

5.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps do not appear to provide coverage of the Subject Property and surrounding area. A copy of the "No Coverage" letter obtained from EDR is included in the Historical Information Appendix.

5.2 City Directories

City Directory research was completed by EDR. Identified occupants associated with the Subject Property are detailed in the table below. Copies of street directories are included in the Historical Information Appendix.

Year	Occupant Listings
2020	Crimson Shipping
2010	Crimson Shipping
2009	Maybank Shipping Co. Inc. (terminals river & marine)
2005	Mobile Marine Terminal
2000	B&F Terminal
1996	B&F Terminal (lumber export)

Review of the city directories indicated that properties surrounding the Subject Property were historically utilized for industrial purposes. The following adjacent property uses of potential concern were identified:

- The north/ northwestern adjacent property addressed as 200 Viaduct Road was identified as Gulf Atlantic Operations, LLC from at least 2009 until 2017. From 1996 until at least 2005

the property was identified as Coastal Mobile Refining Company. In 1995, it was identified as Mobile Chickasaw Facility. In 1992, it was identified as Texas Pipe. In 2000, it had additional listings for Coastal Fuels Marketing and Mobile Chickasaw Facility Inc. In 2009, it had an additional listing for Mobile Chickasaw Facility Inc., implying that business existed there for at least nine years.

5.3 Aerial Photographs

The table below outlines observations of the Subject Property and surrounding area obtained from the review of aerial photographs. The 1992 aerial photograph is incomplete and of poor quality. As such, it will not be summarized. Copies of aerial photographs are included in the Historical Information Appendix.

Year	Location	Development
1950-1967	Subject Property	North and east areas of the property are commercially developed; shipping containers, staging areas, and a pit or waste lagoon of some kind is apparent. Western area appears undeveloped.
	Adjoining Properties and Surrounding Area	North/ northwestern property is commercially developed with the exact use being unclear. Property immediately adjacent to the south is wooded and undeveloped, with commercial property located south of that. Chickasaw Creek is located northeast, east, and southeast of the site with wooded area located beyond that.
1974	Subject Property	Commercial warehouse, appearing to be the Main building on the modern day site, is apparent on site; former oil pit area is not visible / area appears to be filled in. Piles of what appear to be fill material are located in this area of the site. Possible shipping containers on the northern portion. Western area is wooded and undeveloped.
	Adjoining Properties and Surrounding Area	What appears to be an oil or chemical facility with large vertical ASTs is present to the north/northwestern property and further western development is apparent west of that. Wooded area to the south with an oil or chemical company operations located south of that.
1985	Subject Property	Appears similar to the previous photograph. A railroad track is apparent at the northern portion of the site. railway is now visible. In the southwestern portion of the property, the land appears to have been cleared.
	Adjoining Properties and Surrounding Area	The oil / chemical facility at north/ northwestern boundary has more ASTs and increased activity. Transmission line tower

Year	Location	Development
		appears to have been built on the southeastern property. Area south of the site appears to have been partially cleared.
1997	Subject Property	The property is commercially developed with cargo boxes, vehicles, etc. The area where the pit was formerly located appears to have been excavated. Another building is apparent in the northern area of the site.
	Adjoining Properties and Surrounding Area	Relatively the same. Southwestern property has more tree growth.
2006	Subject Property	Office building is developed. Previous excavation is not obvious. Southwestern portion of property is being utilized for storing shipping containers.
	Adjoining Properties and Surrounding Area	Relatively the same. The areas to the south appear to be more commercially developed than in previous photographs.
2011-2019	Subject Property	Relatively the same. As the years increase, it appears less activity is occurring on the property.
	Adjoining Properties and Surrounding Area	Relatively the same. The southwestern property has more tree growth as the years progress. By 2019, the development from 2006 is hardly visible.

The following adjacent property uses of potential concern were identified.

- The apparent oil refinery property to the north/northwest first apparent in the 1974 photograph.

5.4 Topographic Maps

Utilizing the historical topography maps from 1953 to 1982 shows a marsh/ wooded marsh or swamp on the southwestern portion of the subject property. The entire property appears wooded in the 1940, 1941, and 1943 map. Copies of topographic maps are included in the Historical Information Appendix.

5.5 Municipal Records

LaBella obtained limited assessment information from the Mobile County Property Tax website on March 8, 2024. The following information was obtained from these records.

	Findings/Details
Parcel ID(s)	2208440001001.000; 2208440001006.000; 2208440001005.003; and 2208440001005.004
Subject Property Size (acres)	15.42
Current Owner	Buchanan Lumber Mobile Inc
Former Owners	In 2008, Buchanan Lumber purchased parcel number 2208440001005003 from USX Corporation. In 2008, Buchanan Lumber also purchased parcel number 2208440001005004 from William Buchanan. No other deed dates were available on the Mobile County Property Tax website.
Square Footage of Building(s)/Date(s) of Construction	33,000 sq.ft./1998; 15,000 sq.ft./ 1995; 50,800 sq.ft/ 1971
Provided Utilities	NA
Additional Information	NA

5.6 Recorded Land Title Records

According to the User's Responsibility section of the ASTM Standard Practice E1527-21, “to meet the requirements of 40 C.F.R. 321.20 and 312.25, a search for the existence of environmental liens and AULs that are filed or recorded against the subject property must be conducted.” ASTM also states that the User's requirements "do not impose on the environmental professional the responsibility to undertake a review of land title records or judicial records for environmental liens or AULs." In accordance with the ASTM Standard Practice E1527-21, LaBella has requested the User provide copies of the title records for the Subject Property.

Title records were not provided to LaBella for review.

5.7 Additional Sources

No additional historical sources were reviewed.

5.8 Review of Previous Reports

The most recent report for the subject property is a **Phase II ESA from February 2024** conducted by Thompson Engineering. Thompson advanced 10 soil borings via Direct Push Technology. Continuous samples were collected from ground surface to 9-20 ft below ground surface. One composite sample was collected from each soil boring. SB-01, SB-02, SB-03, SB-04, SB-09, and SB-10 were developed into temporary monitoring wells. It is noted that SB-05, SB-06, SB-07, and SB-08 were not developed

due to the presence of free product/ oily material in wells. Analytical results for soils include arsenic detected above EPA industrial RSLs in SB-06 and 1-Methylnaphthaline and PCB-1260 (Aroclor 1260) in SB-07 were detected above EPA industrial RSLs. Analytical results for groundwater include arsenic and lead above EPA RSL in SB-01 and SB-09; lead above EPA RSL in SB-10; and 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene above EPA RSL in SB-04. It is important to note that the vertical thickness of the free product could not be detected by the oil-water interface probe in the wells due to the material coating the sensor, preventing an accurate reading. Photographs included from Thompson's report include an image of the concrete secondary containment filled with oil, additional drums in the machine shop, and images of the free product in the wells. In Figure 3, Adjacent Property Owners, the southwestern adjacent property is owned by Warrior Coal Mining, LLC. It could be possible that the area was mined. The aerial photography from 2006 supports this.

A **Modified Phase I/II ESA** for the northern portion of the shipping container staging area was conducted in **July 1998** by A.C.T. Laboratory, Inc. The property is south of a historic oil refinery. 18 hand auger soil borings were drilled in several areas that appeared to potentially be contaminated to a depth of 6 feet. The samples were analyzed for Total Petroleum Hydrocarbons and one groundwater sample for BTEX was collected near the "shallow ditch". The results were below ADEM's action limit; however, it is important to note that in the Executive Summary it is noted that levels were elevated above ADEM's Corrective Action Limit (CAL).

Copies of the reports are included in the Previous Reports Appendix.

5.9 Historical Summary of Findings

Based on LaBella's review of historical sources, the history of the Subject Property is as follows:

Time Period	Apparent Use/Development
Early 1940s until at least 1970	Wooded undeveloped on the western side of the property. Gulf Shipbuilding Corporation operated a shipbuilding facility west of here and commercial operations extended onto the site. Staging area, cargo boxes, and what appeared to be a 200' x 300' waste oil pit was observed on site near Chickasaw Creek on the eastern portion of the property. It is thought that this was utilized to dispose of waste oil, sludges, and potentially other hazardous chemicals from their operations.
1971	According to tax records, the Main Building was constructed in 1971. The property had what appears to be storage containers on site.
1995	The Northern Warehouse was constructed. Not much change according to aerial photography. APCO constructs transmission tower and a dark, black substance sprayed over the area of approximately 1,000-square feet. Resulted in a cleanup of the spill and an ADEM investigation was conducted. More in Regulatory Information Appendix.
1997-2006	The Office Building was constructed. An excavation was apparent near the area of the former oil pit in 1997 and was not apparent in subsequent photographs. The southwestern portion of the property is apparently utilized as a shipping container staging area.
Approximately 2010 until present	The property operated as Crimson Shipping.

Based on LaBella's review of historical information, the adjacent properties were historically industrial developed. The following adjacent property uses of potential concern were identified:

- North/northwestern property use as an oil refinery and shipbuilding facility.

LaBella's historical research identified the following conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property:

- Historic ASTs with release in the concrete secondary containment area.
- Historic Gulf Shipbuilding Corporation waste oil pit.
- Subject Property use a shipping service (lumber, shipping containers, etc.).
- The north/ northwestern adjacent properties use as an oil refinery and historical use as a shipbuilding facility.

6.0 REGULATORY INFORMATION

Federal, state, and tribal environmental regulatory information was provided by EDR, an independent research firm, which completed an ASTM-compliant regulatory records search. This search was completed to ASTM-defined search distances; however, it should be noted that the distances searched may have been modified based on LaBella's experience due to the geology or nature of the area, as permitted under ASTM E1527-21. Additionally, EDR conducted a search of supplemental Federal, state, tribal, and local databases to augment the ASTM-specified search; any relevant listings from these supplemental searches are summarized in the following sections. The EDR report, dated 3/8/2024 is included in the Regulatory Information Appendix.

The review of regulatory information was completed to evaluate the potential for environmental impact to the Subject Property, including contaminant migration from off-Subject Property locations. This evaluation included a review of regulatory records along with geologic/hydrogeologic information, topographical information, and/or distance relative to the Subject Property.

6.1 Regulatory Report Summary

A complete list of the databases reviewed is included within the EDR report. Below is a summary of the identified listings within their respective search distance:

Regulatory Report Summary

6.1.1 Subject Property Listings

No regulatory listings associated with the Subject Property were identified.

6.1.2 Adjacent Property Listings

The following regulatory listings associated with adjacent properties were identified:

Alabama State Docks at <1/8 to subject property

- FUDS, AL49799F782000, FUDS Number: I04AL3197, Current Owner: STATE AL State Docks Storage, Status: properties without projects, Feature Description: Utilized for storage purposes by Air Service Command, Eligible.

Mobile Defense Homes Corp. <1/8 to Subject Property

- FUDS, AL49799F897700, FUDS Number: I04AL3236, Current Owner: Not Reported, Status: properties without projects, Feature Description: Not Reported, Ineligible.

Zenith Energy Terminal Holding, LLC <1/8 to Subject Property 500 Viaduct Road

- FINDS, ECHO, PFAS ECHO
  - FINDS- ID:110042329922
  - ECHO- Envid:016356974

ARC Terminals Holdings, LLC, Chickasaw < 1/8 to Subject Property 500 Viaduct Road

- RCRA-VSQG, Hazardous Waste Summary- Ignitable Waste & Corrosive Waste, List of NAICS Codes and Descriptions- Petroleum Bulk Stations and Terminals, Other Warehouse Storage

DOW Chem Inc./DOWELL < 1/8 to Subject Property, Old Gulf Shipyard (200 Viaduct Road)

- RCRA NonGen/ NLR-1000106613, ALD000770289, Hazardous Waste Summary: Ignitable Waste, Corrosive Waste, Reactive Waste, Spent Halogenated Solvents used in Degreasing and Solvents, O-Dichlorobenzene, and more included in the EDR Report.

Chickasaw <1/8 to Subject Property 400 Shipyard Street

- RCRA-VSQG, FINDS, ECHO; Owner Alabama Power Company, Electric Power Generator

Gulf Atlantic Operations <1/8 to Subject Property

- PFAS ECHO- had a formal action in 2017

Due to the status of the listings and the lack of reported violations there does not appear to be a REC for the Subject Property in association with the adjacent regulatory listings at this time.

6.1.3 Unmappable Listings

There were no unmapped facilities identified within the EDR report.

6.2 Enforcement Action/Permitted Activities/Institutional Controls

No recorded enforcement actions or institutional controls were identified for the Subject Property during this Phase I ESA.

No records were provided indicating that solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits, or air permits have been issued recently for the Subject Property.

6.3 Regulatory Agency File and Records Review

The purpose of the regulatory file review is to obtain sufficient information to assist the Environmental Professional in determining if a recognized environmental condition, controlled recognized environmental condition, historical recognized environmental condition, de minimis condition, or significant data gap exists at the Subject Property in connection with the identified listings. Regulatory listings identified in the database report for the Subject Property and adjacent properties were evaluated in order to determine the need for a regulatory file review. Based on this evaluation, the following was concluded:

- A file review was completed relative to Subject Property and adjacent property regulatory listings and is included in the summary below.

6.4 Regulatory Information Summary

LaBella's review of regulatory information did not identify conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property, with the exception of the 1995 release incident, which can be found in Appendix D of Thompson's report in Previous Reports.

The 1995 incident occurred during APCO work on the subject property where a dark, black liquid was sprayed over approximately 1,000 square feet during excavation. The source of the release was not identified. ADEM records indicated that UST Branch did not have the authority to manage the site and referred it to both the RCRA Compliance Branch and the Hydrogeologic Unit, RCRA Compliance Branch determined the concentrations of PCBs appeared to be nonhazardous and referred to the Groundwater Branch for TPH Levels. APCO removed approximately seven 20 cubic yard roll offs of of contaminated soils. No other information was available.

7.0 INTERVIEWS

Interviews were completed with representatives of the owner/operator of the Subject Property, Subject Property occupants, neighbors, and/or former owners/operators, to the extent possible, to further assess Subject Property operations and/or potential environmental concerns. Notes from completed interviews are included in the Site Reconnaissance Field Notes Appendix.

Additional information was obtained through federal, state, tribal, and/or local agencies or via the submission of Records Requests, as documented below.

7.1 Owner/Subject Property Representative

Ryan Zarzour, Principal of Zarzour Companies was interviewed during site reconnaissance as part of this assessment on March 6, 2024. The following information was provided:

- Bought in 1975 was Buchanan Lumber until 1999.
- From 1999 until now has been Crimson Shipping and equipment storage; Buchanan still owns the property.
- Mr. Zarzour was aware of the APCO (Alabama Power Company) release incident- drilled for transmission tower location and oil "squirted out" and aware of the machine shop.
- He was unaware of the hazardous material storage, but knew of a historic AST.
- Very little operations have occurred on-site during the last 8 months.

7.2 Current Occupants

There were no environmentally significant occupants identified at the time of the site inspection; as such, current occupant interviews were not conducted.

7.3 Former Owners/Operators/Occupants

No past owners/occupants/operators were contacted because no contact information was provided through available municipal records or through a focused online search.

However, Thompson Engineering spoke with Mr. Alan Weatherford, associated with Crimson Shipping, during the initial Phase I ESA site investigation and noted that Mr. Weatherford informed them of an old Prichard waterline that potentially ran underneath the office building and possibly ran through the old waste oil pit. Mr. Weatherford stated that this caused the warehouse foundation to sink, since then the waterline has been rerouted.

7.4 Neighbors

LaBella did not attempt to contact neighbors regarding the Subject Property due to the amount of knowledge on the Subject Property and the Property's lack of business in the past 8 months.

7.5 City of Chickasaw

LaBella attempted to contact the City of Chickasaw's Environmental Officer and City Inspector via phone at the numbers provided on the City of Chickasaw's website. There were no answers to either number. LaBella did reach the Public Information Officer, Tommy McDuffie; however, Mr. McDuffie's complete response has not been received as of the date of this report.

7.6 Summary of Interviews

LaBella's interviews and/or review of provided records identified the following conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property:

- Bought in 1975 and operated as Buchanan Lumber until 1999.
- From 1999 until present the has operated as Crimson Shipping.
- Mr. Zarzour was aware some potential RECs, which have been previously noted.

8.0 ADDITIONAL SERVICES/ASTM NON-SCOPE CONSIDERATIONS

8.1 Emerging Contaminants

Hazardous substances are those defined as such pursuant to CERCLS 42 U.S.C. § 9601(14), as interpreted by USEPA regulations and the courts. There are some substances that others may assume to be classified as hazardous substances that are in fact not defined (or not yet defined) as hazardous substances under CERCLA through interpretation by USEPA regulations.

These and any other "emerging contaminants," where they are not identified as a hazardous substance by CERCLA, as interpreted by USEPA regulations and the courts, are not included in the scope of E1527-21. Some of these substances may be considered a "hazardous substance" (or equivalent) under applicable state laws. In those instances, where a Phase I ESA is performed to satisfy both federal and state requirements, or as directed by the user of the report, it is permissible to include analysis and/or discussion of these substances in the same manner as any other Non-Scope Consideration. If and when such emerging contaminants are defined as hazardous substances under CERCLA, as interpreted by USEPA regulations and the courts, such substances shall be evaluated within the scope of ASTM E1527-21.

No information was provided indicating emerging contaminant impacts to groundwater in the area of the Subject Property; however, LaBella notes that no laboratory results for emerging contaminant analysis were provided for review.

9.0 FINDINGS AND OPINIONS

LaBella has been contracted by Zarzour Companies to perform a Phase I ESA report for the Chickasaw Marine Terminal property, 150 Viaduct Road, Chickasaw, Mobile County, AL.

This assessment was prepared according to the ASTM E1527-21 as a portion of the User's requirements in the All Appropriate Inquiries process and to satisfy the due diligence requirements set for Zarzour Companies.

The Subject Property is further described in Section 2.0 while the history of the Subject Property is summarized in Section 5.9.

Based on the results of this assessment, the following RECs have been identified in connection with the Subject Property:

- Staining in the secondary containment area from the removal of historic ASTs.
- Potentially hazardous material in corroded, unlabeled containers, buckets, and drums across property with evidence of release.
- The presence of an approximately 200' x 300' waste oil pit located on the eastern central portion of the Site while in use by Gulf Shipbuilding Corp. The pit was used for the disposal of waste oil, sludges, and potentially hazardous chemicals.
- An incident occuring in 1995 on the Subject Property identified PCB contaminated soils. APCO removed seven 20 cubic yard roll-offs of PCB containing soil from the site. PCB contaminated soil and/or groundwater may still be present on-site.
- The 1995 incident also identified a dark black liquid that sprayed from the ground during APCO on-site work and covered over 1,000-square feet. The source of this release was never identified.
- Environmental impacts to soil and groundwater were noted within a Phase II ESA from February 2024 completed for the Subject Property.
- Free product was noted within soil borings SB-05 through SB-08 installed on-site during the February 2024 Phase II ESA. Soil borings SB-06, SB-07, and SB-08 were within the former waste oil pit area.
- The Main Building contains floor drains within the building with obvious staining around the floor drains. The integrity of the drain system is unknown and could be a source of release beneath the building.
- The management practices of petroleum products and hazardous chemicals of historical owners and operations is unknown.
- An oil refinery adjoins the subject property to north/northwest and has operated for approximately 50 years and is located hydrogeologically upgradient. This property operated as a shipbuilding facility prior to operating as an oil refinery.

Based on the results of this assessment, no CRECs have been identified in connection with the Subject Property.

Based on the results of this assessment, no HRECs have been identified in connection with the Subject Property.

Based on the results of this assessment, no de minimis conditions have been identified in connection with the Subject Property.

Based on the results of this assessment, no significant data gaps have been identified in connection with the Subject Property.

9.1 Additional Investigation

Based on the findings of this assessment, LaBella is of the opinion that additional investigation of the Subject Property is warranted.

10.0 CONCLUSIONS

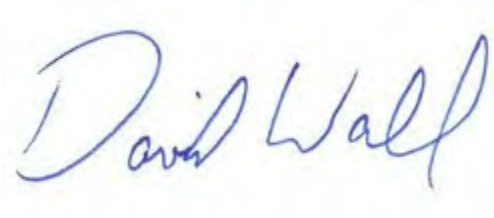
LaBella has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-21 for 150 Viaduct Road, Chickasaw, AL, the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This assessment has revealed the following recognized environmental conditions in connection with the Subject Property:

- Staining in the secondary containment area from the removal of historic ASTs.
- Potentially hazardous material in containers, buckets, and drums across property with evidence of release and corrosion.
- Historic property use as a waste oil pit for Gulf Shipbuilding Corp.
- 1995 APCO incident on Subject Property.
- Analytical results from the recent Phase II indicated environmental impacts to soil and groundwater on property.
- SB-05 through SB-08 contained free product in the soil borings.

This report constitutes the findings of LaBella's investigation conducted for the Subject Property as written and reviewed by the following personnel:

Daniel Gossett
Project Manager

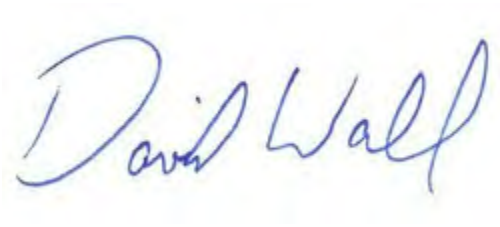


David Wall
Phase I Technical Reviewer

11.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 C.F.R. § 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.



David Wall
Phase I Technical Reviewer
Environmental Professional

Mobile County, Alabama

ULI—Urban land-anthroportic udorthents complex, 0 to 8 percent slopes, industrial

Map Unit Setting

National map unit symbol: 2x5q7
Elevation: 0 to 80 feet
Mean annual precipitation: 54 to 69 inches
Mean annual air temperature: 52 to 70 degrees F
Frost-free period: 215 to 270 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land, buildings and paved area: 50 percent
Anthroportic udorthents, transported and leveled soil material, and similar soils: 45 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Urban Land, Buildings And Paved Area

Setting

Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy fluviomarine deposits derived from sedimentary rock

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8s
Hydric soil rating: No

Description of Anthroportic Udorthents, Transported And Leveled Soil Material

Setting

Landform: Fluviomarine terraces
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Tread
Down-slope shape: Linear, convex
Across-slope shape: Linear, convex
Parent material: Human-transported material over loamy marine deposits

Typical profile

^Au - 0 to 10 inches: sandy loam
^Cu - 10 to 43 inches: sandy loam
2Btb - 43 to 80 inches: silt loam

Properties and qualities

Slope: 0 to 8 percent

Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.14 in/hr)
Depth to water table: About 39 to 51 inches
Frequency of flooding: None
Frequency of ponding: None
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum: 1.0
Available water supply, 0 to 60 inches: Moderate (about 7.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydric soil rating: Unranked

Minor Components

Smithton

Percent of map unit: 5 percent
Landform: Terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

Site Reconnaissance Field Notes

Privileged and Confidential

Location 150 Vioduct Rd

Project / Client

Date 3-6-24

Met Ryan Zarzour onsite

- His knowledge
  - Sell bought in 1975, Was Buchanan lumber
  - Until 1997
  - 1999 - current; has been Crimson (Shipping) IM and equipment storage
  - Buchanan is still the owner
  - Aware of the Apco release incident we were told about.
  - Unaware of haz mat storage, but knew of a historical AST, May have been a release
  - Aware of machine shop
  - Have barely been doing any business in last 8 months
- Buildings
  - 2 story building used as office by Crimson
    - ~ Corrugated metal panels, S.O.G, hip & gable roof (metal panels)
    - ~ Machine shop in back (SW corner)
      - heavy oil staining (evidence of cleanup)
      - 4 55-gal drums - 3 empty, 1 full (red)
      - Parts washing station
      - floor drain
      - blue plastic drum looks like it was used into to pump floor drain contents

Location 150 Vioduct Rd - cont.

Project / Client

Date

    - Concrete secondary containment on West elevation of office building has evidence of release (heavy staining)
- 3 PM Transformers in SW corner of prop near the secondary containment. New. No staining
- Warehouse attached to office bldg
  - ~ largely empty
  - ~ No evidence of industrial machinery use
  - ~ No staining, No floor drains
  - ~ Ryan says was used to store lumber recently
- Tanker boat filling? on the South adj property
- Rail tracks along eastern boudary
- Lean 1 Building (Main?)
  - large 1 story corrugated metal panel bldg
  - largely empty, No evidence of industrial machinery
  - red 55 gal drum (empty), some staining? or wet?
  - 2 floor drains in ~~SW corner~~ Southern portion
  - Staining & evidence of cleanup near drains
- 3 PM transformers West central portion
  - New, No staining
- Northern Warehouse
  - No staining, No evidence of industrial machines
- 2 blue 55-gal drums (empty)

Rite in the Rain

Location 150 Viaduct Rd – Cont. Date

Project / Client

- SW finger of property recently used to store shipping containers, according to Ryan
  - telephone poles, likely treated w/ creosote

Adjoining properties:

- North & West: refinery
- East: Water, then undevelopes
- South: Walter Energy (restricted area), Chickasaw Marine Services

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by LaBella Associates were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by LaBella Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
