ADEM Announces Permit Transfer and Modification

MONTGOMERY - The Alabama Department of Environmental Management has announced the transfer and modification of a solid waste facility permit for the Noble Hill Landfill (permit No. 28-08), near Attalla.

On August 27, the permit was transferred from S.V. Enterprises, LLC, to Evergreen Environmental Partners, LLC, which plans to begin clearing and remediation operations immediately.

Located off of Sand Valley Road, the site contains landfill units that ceased operations more than 25 years ago. The units were not properly closed and resulted in years of litigation.

The new owners have committed to remediating the site to meet current operating and closure standards, while adding a new state of the art, lined, disposal area at the site.

Among other operating requirements under the permit modification, the new owners are required to implement groundwater monitoring, methane gas monitoring, sediment and runoff control, and vector control programs at the landfill.

More information regarding this permit transfer and modification can be obtained by contacting ADEM's Solid Waste Branch at landmail@adem.alabama.gov or (334) 274-4201.

The site has been an environmental concern for the Department, and this step represents getting the site back into compliance to further protect human health and the environment.
